Thank you !

We would like to thank you for your purchase! We'd love to hear your feedback so feel free to send us an email at support@satochip.io to let us know how your experience went.

Quick setup - BTC

1 Download the latest Electrum Satochip client available on GitHub:
https://github.com/Toporin/electrum-satochip/releases

2 Plug your card wallet in a card reader and launch the Electrum Satochip client.

3 For a quick start, follow these steps:
- Choose a name for your wallet file – Next
- "Standard wallet" – Next
- "Use a hardware device" – Next

4 Follow the Electrum wizard and insert your desired personal PIN code to secure the card. Choose whether you want to use the 2FA application (Android only).

5 Insert your seed or generate a brand new one. Take care to backup the seed in a safe place. With the PIN code, these are the only information needed to recover your wallet.

6 Congratulations! Take a beer and chill. You have now a fully functional and highly secured Satochip Bitcoin hardware wallet.
