# STEPS:

1. Put the shirt on the costume wearer and mark where you will put the 4 additional legs (See Pic 1)
2. Lightly stuff 4 long black socks, just enough to hold their shape.
3. Pin and sew those socks onto the shirt using your marks as guidelines (See Pic 2)
4. Calculate the amount of yarn you need to cut for each side (See Pic 3)
5. Cut two pieces of yarn in that length.
6. Attach one end of the yarn to the sleeve using a sewing machine or needle and thread.
7. Measure desired distance to the top stuffed sock and wrap yarn securely around. Then tie (See Pic 4)
8. Measure desired distance to the next stuffed sock and wrap yarn securely around. Then tie again and trim off any remaining yarn.
9. Repeat steps 6-8 on the other side.
10. OPTIONAL: Top with a hat and draw a web on the face.

Pic 2

Pic 3

x=distance between each leg  
y=distance to wrap and tie yarn securely around the sock legs  
 $2x + 2y + 2$ " ← this extra 2" is just so you have a bit to spare.

EXAMPLE:

I wanted 6 inches between the spider legs, and it also took 6 inches to wrap around and tie the yarn. My formula looked like this:

$$2(6) + 2(6) + 2 = 26$$
