5/32" Hex L-Key
7/16" Open End Wrench

PLEASE READ BEFORE BEGINNING INSTALLATION

Prior to starting the installation of this product we suggest reading the entire instruction manual. Several of the steps involved in installation of this product are fairly complex and reading through ahead of time will help you with a pain free installation. An extra minute or two spent now will save a lot of headache down the road.

This product must be installed by someone with a certain amount of mechanical aptitude. Vector OffRoad can not be held liable for damage caused to your vehicle due to poor or incomplete installation of this product. If you have any questions, are missing parts or need help locating a skilled installation shop in your area please contact us.

UFO's are for added cosmetic appearance and do not add to the functionality of the vehicle. This is not to be used where the OEM electrical pass through is still being utilized as it plugs the pass through hole.

1. Open the rear tailgate and remove the plastic tailgate access grate by pulling on the vertical side closest to the hinge side of the tailgate. There are two clips that hold it attached. Once the two clips are snapped out, slide the cover out of the opening.

2. If you haven't removed the OEM electrical grommet, do so now by pulling on it from the outside of the tailgate. Disconnect the wiring on the inside of the tailgate before removing completely.

3. Place the UFO and the 1/4" flat head bolt through the outside of the tailgate and secure them from the inside using the fender washer and the nylock nut. Take extra caution as to not drop the hardware inside the tailgate! Tighten only until snug using a 5/32" hex L-key and a 7/16" open end wrench.
