

## Why monitor my hives?

**Main objective:**  
Avoid a critical level  
of Varroa mite infestation

### Before treatment

Determine the best strategy and the ideal treatment period  
► Eliminate or limit the damage caused by Varroa mites

### After treatment

Ensure that previous treatments have been successful  
► More reliable monitoring data minimizes losses

1 colony saved ► \$200 value  
10 colonies saved ► \$2,000 value

3% infestation cuts honey yield  
by up to 28 pounds/year<sup>1</sup>  
Boosts survival rate and builds profits

<sup>1</sup> Maisonnasse, et al, 2014. A study conducted by INRA found that a 3% Varroa infestation cut honey production by 11 lbs. of lavender honey per flow, or as much as 28 lbs. per year.

## Fight Varroa with Véto-pharma products

**Apivar**<sup>®</sup>  
By Véto-pharma

Varroa destructor?

Apivar exterminator.

> Kills up to 99% mites in 1 application<sup>1</sup>

Apivar is the only amitraz-based apiary product that treats not just one generation of Varroa mites, but several successive generations, reducing mite populations in the hive by up to 99%<sup>1</sup>.

<sup>1</sup> Yves Le Conte and Didier Crauser - UMR 406 INRA/UAPV Invertebrate Ecology, Laboratory of Biology and protection of the bee, INRA Avignon, France, 2006.

## A unique tool for effective and reliable Varroa monitoring

Quick and easy to use  
Only 3 steps!

### When do I monitor my hives?

- ▶ Made from durable plastics
- ▶ A robust and reusable product

- ▶ Tight-fitting lid is leak-free and comfortable to use

- ▶ Two molded guide lines allow samples of 200 or 300 bees

- ▶ Designed for effectiveness: Fallen mites pass through holes in the base and sides of the filter basket

- ▶ Transparent bowl allows accurate counting and reliable sampling

- 1** Collect the sample bees in the transparent bowl.

Watch our tutorial video on [www.veto-pharma.com](http://www.veto-pharma.com)

www

- 2** Separate mites from bees by shaking gently for 60 seconds in alcohol or winter windshield washer fluid.

- 3** Count the number of fallen mites in the bottom of the bowl and estimate infestation.

- ▶ **LATE WINTER / EARLY SPRING**  
Assess the need for a springtime treatment, or confirm that a previous treatment has been successful.

- ▶ **DURING THE HONEY FLOWS**  
Detect a Varroa build-up and determine if intermittent treatments between honey flows are required.

- ▶ **AFTER THE HONEY FLOWS**  
Determine what fall treatment strategy is most appropriate.

- ▶ **AUTUMN AND EARLY WINTER**  
Ensure effectiveness of the autumn treatment and assess the need for additional treatment in winter, when the brood is absent, or early the next spring.
