Double El-Bo Arm

The El-Bo Arm is the fundamental design behind a series of incredibly strong articulating arms that can be used to hold lights, cameras, monitors, musical instruments, tablets, and more.

The El-Bo Arm has an elegant knee-locking mechanism that makes it possible to operate with one hand. The mechanism makes repositioning the arm quick and easy.

The Double El-Bo Arm allows for easy positioning of mounted equipment. Its jointed arm allows you to mount gear in nearly any position needed. One end of the Double El-Bo Arm has a 5/8" pin with a 3/8"-16 female thread and the other has a 3/8"-16 male thread.

The El-Bo Arm series of articulating arms is patent protected.

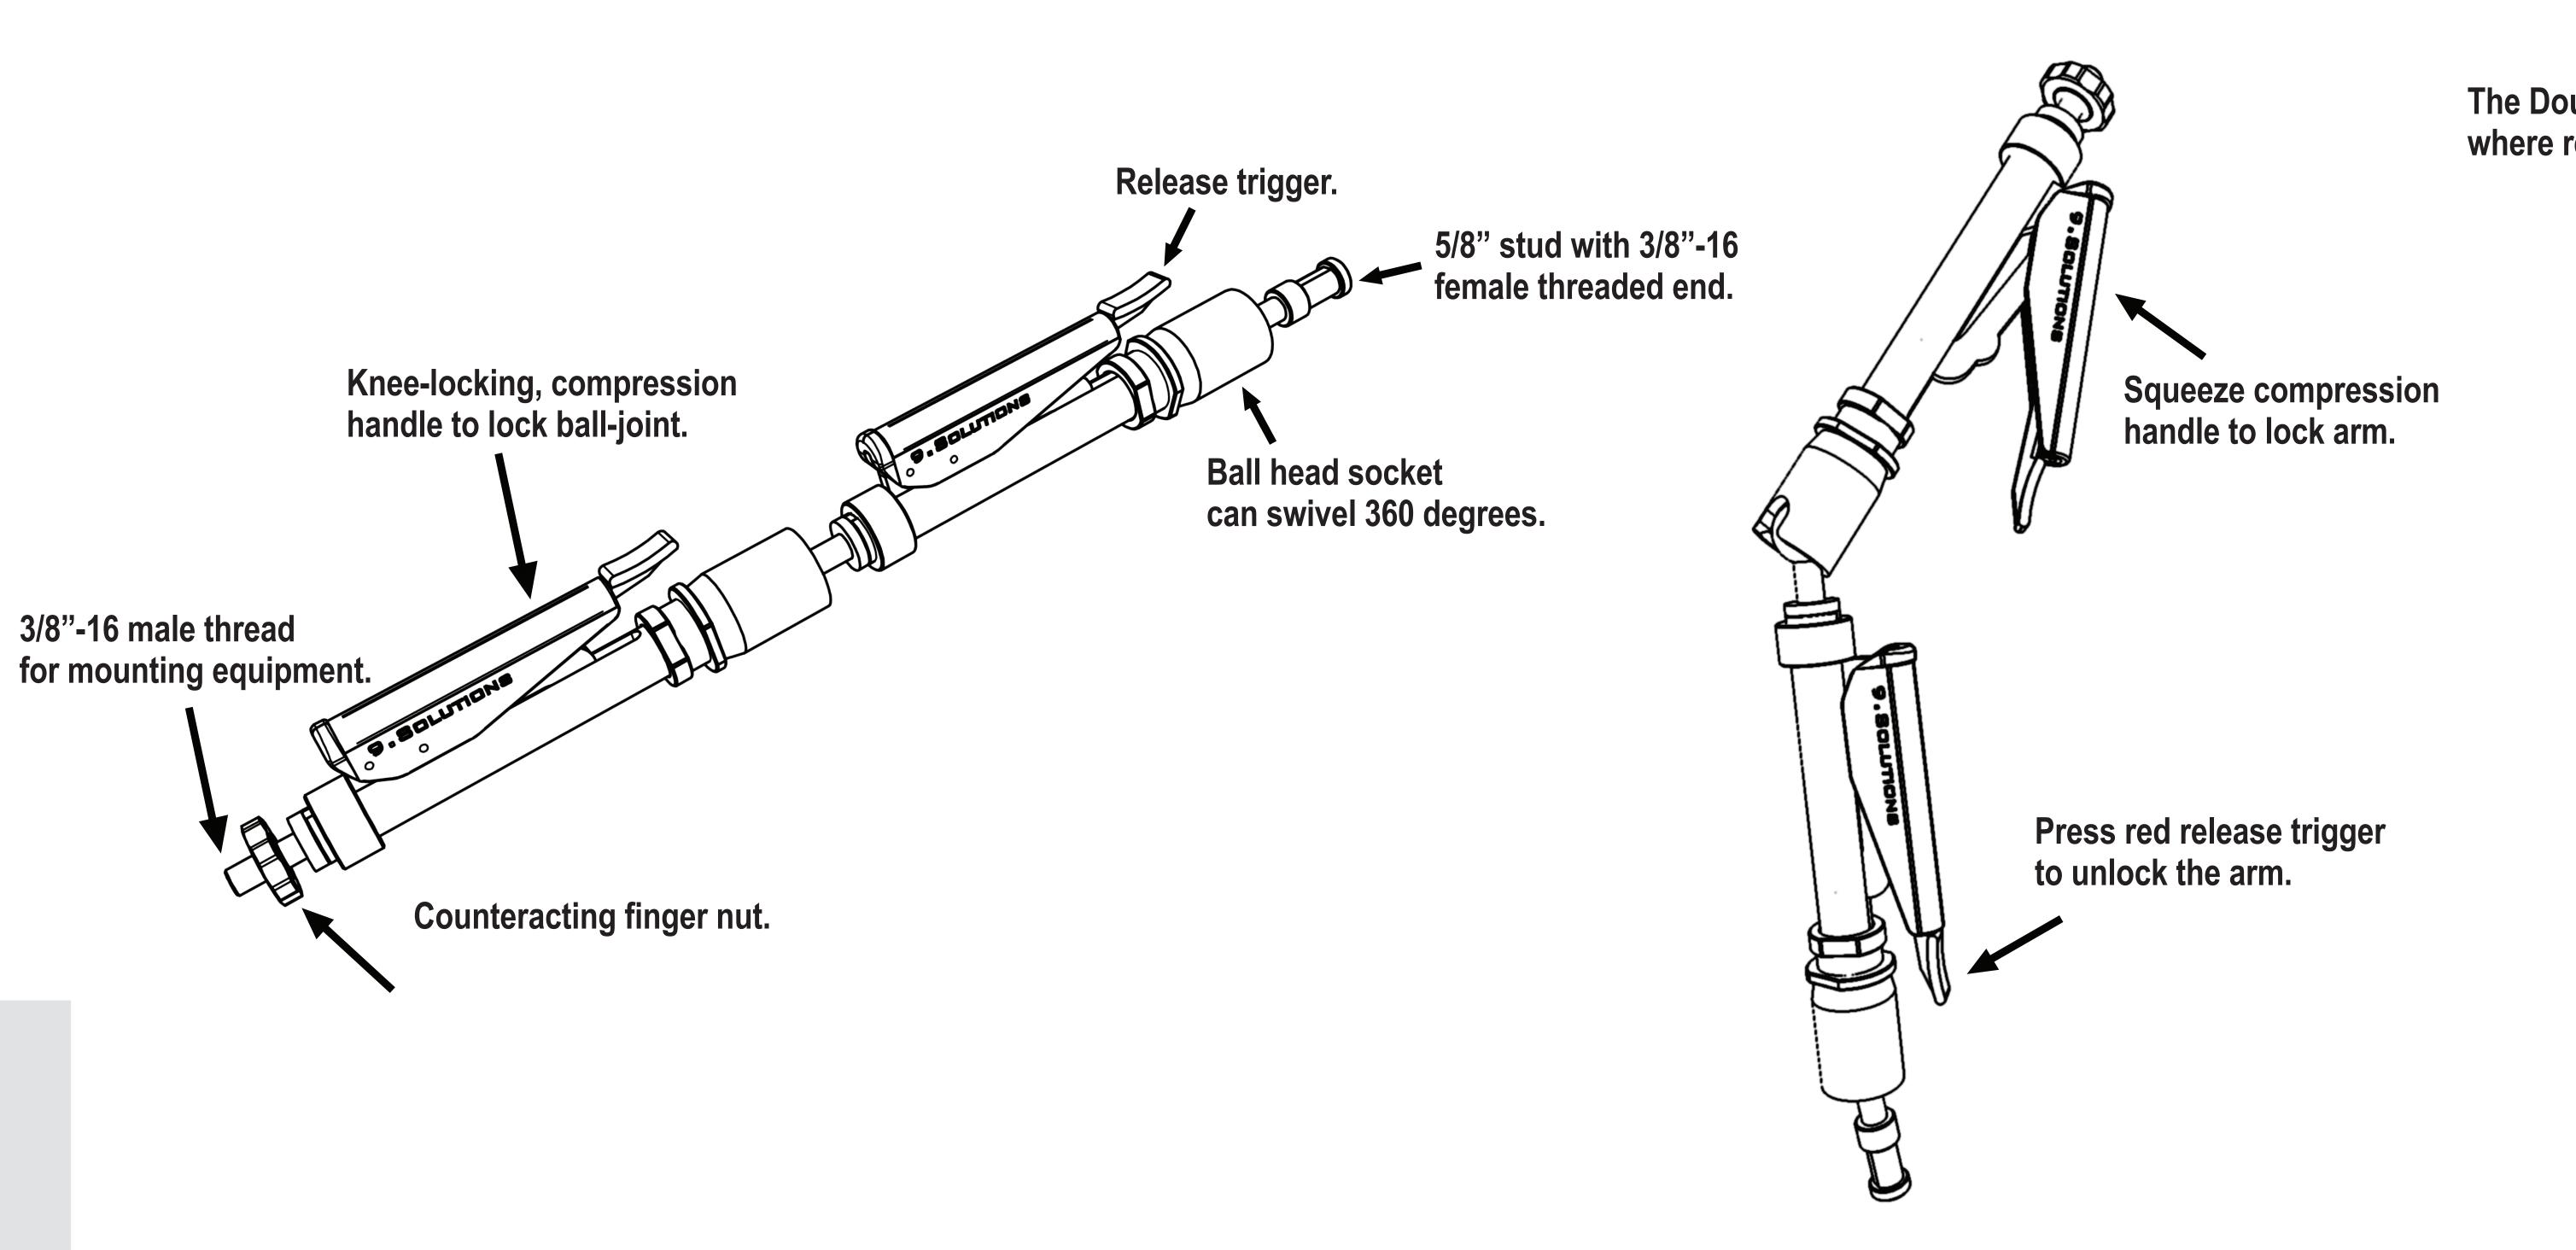

Thanks for purchasing a 9. Solutions product. With great passion, we design our products to be as versatile as possible. We hope that our products contribute to your creative vision.

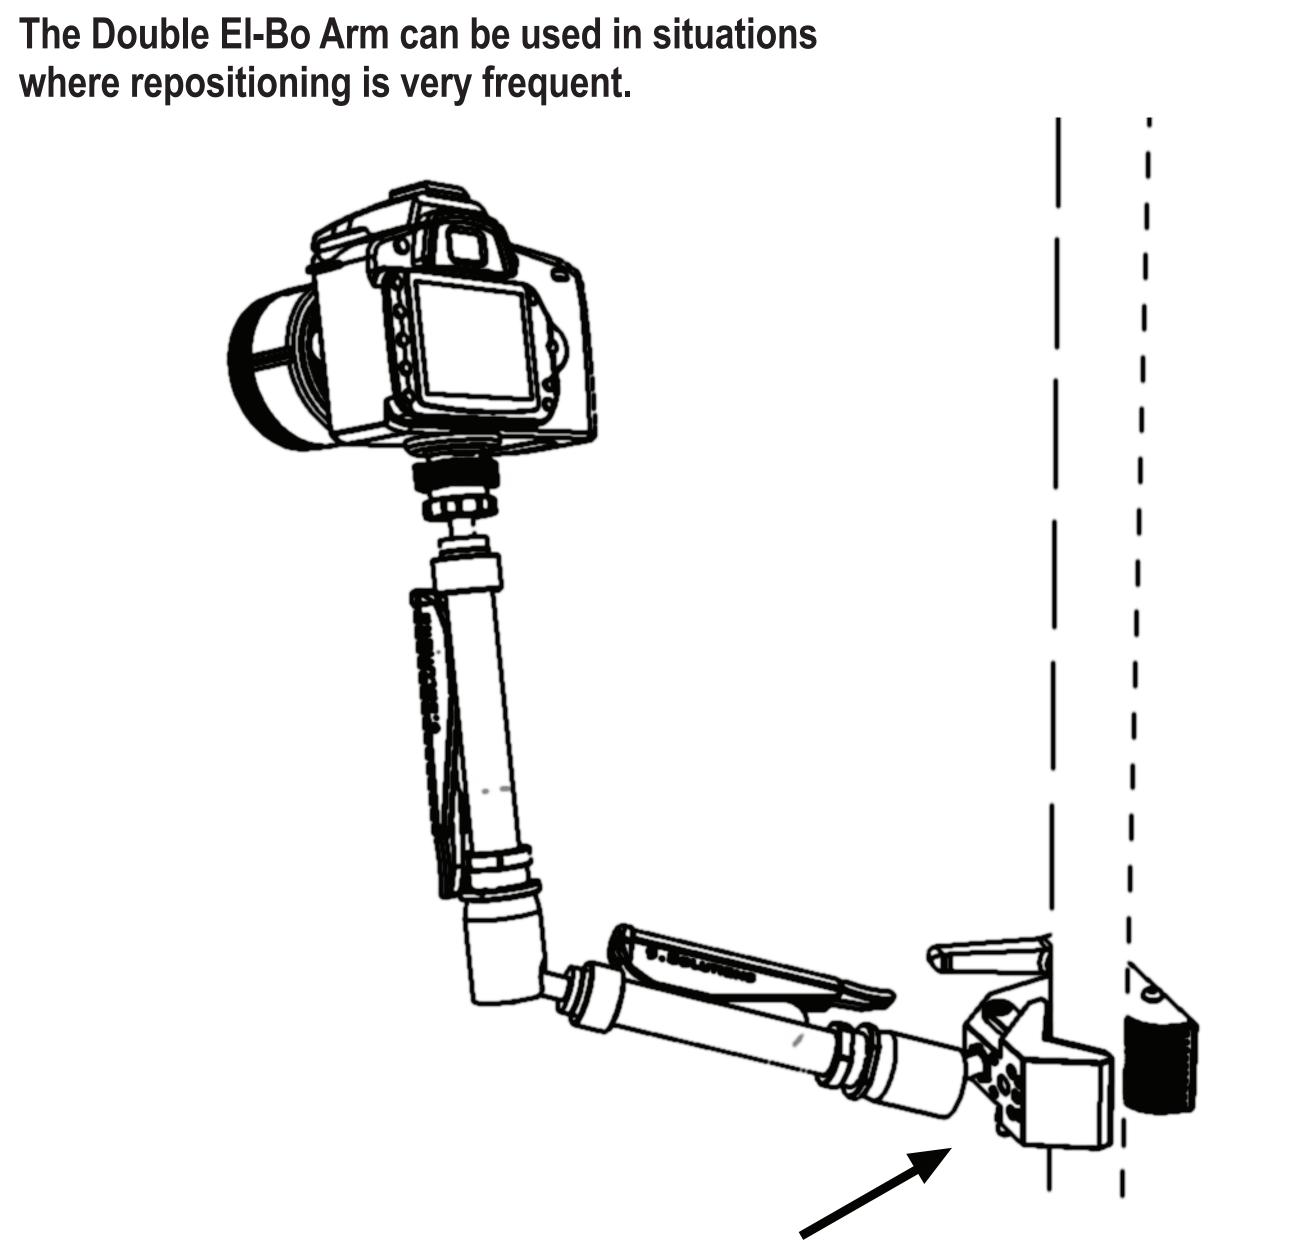

Sincerely,

The 9.Solutions Team
