

Please keep these instructions for future reference

HAY RACK INSTALLATION

Hay Rack Capacity:

Half Bale size holds up to 1/2 of a small hay bale

Full bale size holds a full square hay bale

Frame [1]

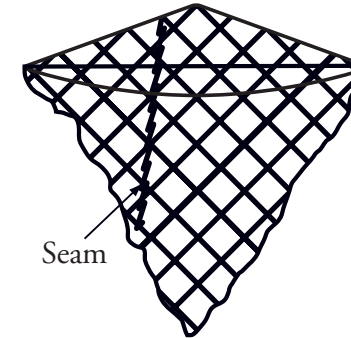

Net [1]

Yoke [4]

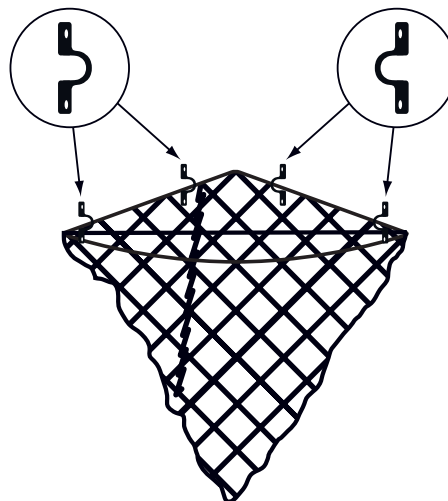

Heavy Duty
Wood Screw [8]

Tools Needed for Installation: drill, screwdriver
or screwdriver drill bit, tape measure

Note: Heavy duty wood screws require a T25 star bit.

2. Position Hay Rack in preferred corner at desired height so horse cannot eat over the top of the frame. (If your horse is shod hang it high enough so your horse cannot paw at the net.) The empty net should hang ideally at chest height. Place 2 yokes on each side of the frame and secure with included screws. You are done! Toss in your hay & walk away!
