

Gardone Val Trompia, May 4th, 2020

Dear Mrs. Gao,

In order to re-start the activities in Beretta, after the Coronavirus lockdown, we have decided and implemented a safety protocol that defines the procedures, the tools, the personal protection devices to be used in the company.

As indicated by the Health and Safety Institution, one of the most immediate and critical measure to understand the health status of the employee, coming in the company, is to check the body temperature

Ten days ago we installed the 2 IR236 systems in our main entrance gates (pls see the pictures) with the aim to have a faster and safer check instead of using the contact thermometer or another thermal camera that requires to stay in front of the camera for some seconds.

Before writing this letter, I've waited one working week to observe the functionality and the reliability of the cameras and to collect some comments from our surveillants.

The installation of the systems was easy because they arrived already prepared to be connected to the computer; the software is user friendly and allow to mask some area where there are heat sources that can disturb the measurement. The software takes pictures if the temperature of the people is higher than the alarm level.

We did some comparison with the other temperature measurement devices and we realize that the IR236 system is really able to provide the body temperature, that, in some cases, is different from the skin temperature. In fact in the morning, if the people is coming from outside where the temperature is chilly, the skin temperature is lower with respect to the body temperature. In this case, we have realized that the IR236 provides a temperature closed to the temperature measured with a contact thermometer placed in a warmer part of the body.

The measurement is also fast, the people do not need to stop, they can walk during the measurement and if the temperature is above the alarm level, the system makes a sound and takes pictures.

I can tell you that the surveillants are now fully engaged with the system.

I'd like to thank you and I hope to start a future cooperation.

Best regards
Marco Bassoli
