

# **MANAGING FIRE**

**IN THE URBAN WILDLAND INTERFACE**

## **Publisher's Note**

Before you rely on the information in this book, be sure you are aware that some changes in the statutes or case law may have gone into effect since the date of publication. The book, moreover, provides general information about the law.

Readers should consult their own attorneys before relying on representations found herein.

### **NOTICE**

This book is designed to assist you in understanding fire management law and practice. It is necessarily general in nature and does not discuss all exceptions and variations to general rules. Also, it may not reflect the latest changes in the law. It is not intended as legal advice and should not be relied on to address legal problems. You should always consult an attorney for advice regarding your specific factual situation.

## **Dedication**

*This book is dedicated to the memory of Battalion Chief John Eliff, California Department of Forestry and Fire Protection. John's passion for fire safety inspired our community and his peers to embrace the need for planning and practical implementation.*

# Chapters at a Glance

## Part One

### Understanding the Threat of Urban Wildland Interface Fire

- 1 **Significance of the UWI Fire Issue** . . . . . *page 3*
- 2 **UWI Fire-Related Concepts: A Primer** . . . . . *page 13*
- 3 **The Players—Who Should Be Involved?** . . . . . *page 25*
- 4 **Ghosts at the Table: Federal, State, and Local Provisions for UWI Fire Planning** . . . . . *page 41*

## Part Two

### Assessing the Threat and Customizing Solutions

- 5 **Choosing the Right Threat Assessment** . . . . . *page 53*
- 6 **A Detailed Look at Accepted Threat Assessment Methods** . . . . . *page 69*
- 7 **Completing the Assessment and Developing a Plan** . . . . . *page 105*
- 8 **Gathering Forces to Implement the Best Solutions for Your Community** . . . . . *page 117*
- 9 **Tools to Reduce Threat** . . . . . *page 129*

## Part Three

### Practical Solutions and Management Approaches: Best Practices

- 10 **Community Awareness and Ignition Prevention** . . . . . *page 141*
- 11 **Land Use Policy and Planning** . . . . . *page 151*

- 12 **Community Design Solutions—New Residential Development Layout** . . . . . *page 169*
- 13 **Community Design Solutions—Existing Residential Development** . . . . . *page 177*
- 14 **Community Design Solutions—Utility Locations and Capacity (Overhead Power Lines, Gas Tanks, and Water)** . . . . . *page 185*
- 15 **Community Design Solutions—Road Networks for Access and Evacuation** . . . . . *page 193*
- 16 **Community Design Solutions—Structure Design and Materials** . . . . . *page 201*
- 17 **Community Design Solutions—Domestic Landscape Fuels** . . . . . *page 215*
- 18 **Community Design Solutions—Wildland Fuels** . . . . . *page 229*
- 19 **Emergency Service Responses and Residents' Response to Fire** . . . . . *page 249*

## Part Four

### Challenges and Strategies for Implementing Solutions

- 20 **Existing Industries with Vested Interests** . . . . . *page 265*
- 21 **Environmental Challenges** . . . . . *page 279*
- 22 **Biomass Utilization and Disposal** . . . . . *page 299*
- 23 **The Challenge of Changing Human Behavior** . . . . . *page 311*
- 24 **Funding Challenges** . . . . . *page 321*

## Part One

### Understanding the Threat of Urban Wildland Interface Fire

#### CHAPTER 1

##### **Significance of the Urban Wildland Interface Fire Issue / 3**

<b>What Is a UWI Fire Threat?</b> . . . . .	3
<b>Why There Is No Agreement on “Fire Threat”</b> . . . . .	4
<b>Developing Community Definitions</b> . . . . .	6
<b>Long Evolution of UWI Fires</b> . . . . .	7
<b>Why a Proactive Mitigation Strategy Is Needed</b> . . . . .	8
<b>Need for Assessment and Solutions to Address the Threat</b> . . . . .	9
<b>Personal Responsibility for Reducing UWI Fire Hazards</b> . . . . .	10
“Burned Through, But Not Burned Out” . . . . .	10
<b>Living Compatibly     with Fire.</b> . . . . .	11

#### CHAPTER 2

##### **Urban Wildland Interface Fire-Related Concepts: A Primer / 13**

<b>Basics of UWI Fire</b> . . . . .	13
<b>Primary Fire Triangles</b> . . . . .	13
<b>Fire Types and Behavior</b> . . . . .	14
Fire types • Fire behavior	
<b>How Different Elements Contribute to Potential Damage from Fire</b> . . . . .	16
<b>Hazards Around the House.</b> . . . . .	16
Size of fuel and total volume • Depth and structure of fuel bed • Moisture level • Chemistry	
<b>Structure-Related Elements</b> . . . . .	18
Structure density • Structure construction • Structure siting	
<b>Landscape/Wildland     Vegetation-Related Elements</b> . . . . .	20
Domestic landscapes • Wildland vegetation	
<b>Elements That Affect the Ability to Suppress Fire</b> . . . . .	21
<b>Utilities and Infrastructure</b> . . . . .	21
Water supply for fire suppression services • Utility locations • Access	
<b>Community Fire Protection</b> . . . . .	22
Wildland versus structure protection • Level of service • Community involvement	

# Contents

## CHAPTER 3

<b>The Players– Who Should Be Involved? / 25</b>	
<b>In General</b> . . . . .	25
<b>Who Should Be Involved in a Community-Level Assessment and What Skills Do They Bring?</b> . . . . .	25
Planning Department •	
Building Department •	
Economic Development Department •	
Public Safety Department •	
Public Works Department •	
Parks Department	
<b>What If Your Project Doesn't Require Collaboration?</b> . . . . .	28
<b>National and State Entities That Influence Threat Assessment and Potential Solutions</b> . . . . .	28
<b>Who Are the Players and Why Do They Matter?</b> . . . . .	28
<b>National Agencies and Organizations</b> . . . . .	29
International Code Council •	
National Fire Protection Association •	
National Wildfire Coordinating Group •	
National Association of State Foresters •	
U.S. Forest Service • Bureau of Land Management • National Park Service •	
Fish and Wildlife Service • Bureau of Indian Affairs • Federal Emergency Management Agency • Tribes •	
Wildland Fire Leadership Council	
<b>California State Agencies and Organizations</b> . . . . .	32
California Office of the State Fire Marshal • California Fire Alliance •	
Western Governors Association	

<b>Identifying UWI Problems and Viable Solutions Depends Upon the Viewpoints Involved</b> . . . . .	32
<b>Range of Viewpoints</b> . . . . .	32
Suppression • Environmental management • Common sociological •	
Economic • Homeowner •	
Political • Historic	
<b>Critic, Nay-sayer, Detractor, Carper, Blamer, Quibbler, Censor, or Judge</b> . . . . .	35
Structures should be fire safe • Park lands and open space should not be sacrificed to save adjacent homes •	
Government should protect homes •	
Government should not be in the business of home protection • Let the market prevail • Let the rich people pay for their own safety	
<b>Collaboration versus “Going It Alone”</b> . . . . .	37

## CHAPTER 4

<b>Ghosts at the Table: Federal, State, and Local Provisions for UWI Fire Planning / 41</b>	
<b>Federal Agencies, Policies, and Laws</b> . . . . .	41
<b>National Fire Plan</b> . . . . .	41
<b>Disaster Mitigation Act 2000</b> . . . . .	42
<b>Findings to Congress from the National Academy of Public Administration</b> . . . . .	42
<b>Healthy Forest Restoration Act and Community Wildfire Protection Plans</b> . . . . .	43
Collaboration • Prioritized fuel reduction •	
Treatment of structural ignitability	

# Contents

<b>State Policy and Existing Laws</b> . . . . .	45
Defensible space around structures •	
Minimum fire safety regulations •	
Natural hazard disclosure on sale	
of real estate • Fire Hazard Assessment	
and Zoning Program	
<b>Regional Agencies</b>	
<b>and Local Government</b> . . . . .	48
<b>Economic Pressures</b> . . . . .	49
Insurance • Building	
industry and developers	

## Part Two

### Assessing the Threat and Customizing Solutions

#### CHAPTER 5

#### **Choosing the Right Threat Assessment / 53**

<b>Assessment Should Be</b>	
<b>Tied to Specific Needs, Goals,</b>	
<b>Objectives, and Desired Products</b> . . . . .	53
<b>What Are the Critical Questions?</b> . . . . .	54
<b>Assessment Methods</b>	
<b>Include Models That Vary</b>	
<b>from Simple to Complex</b> . . . . .	55
Simple models • Complex	
models • Data limits	
<b>What Is the Scale of the Problem?</b> . . . . .	57
<b>Is It Wildland-Urban or Urban-</b>	
<b>Wildland? Interface, Intermix,</b>	
<b>Occlusion, or Island?</b> . . . . .	58
<b>Wildland Areas</b> . . . . .	58
<b>New Development with Wildland</b>	
<b>Interface or Intermixed Wildlands</b> . . . . .	59
<b>Existing Communities</b> . . . . .	59

<b>Does the Assessment</b>	
<b>Meet Your Needs?</b> . . . . .	60
<b>Basic Components Used in</b>	
<b>Several Assessment Methods</b> . . . . .	61
<b>Fire History</b> . . . . .	62
<b>Frequency of</b>	
<b>Severe Fire Weather</b> . . . . .	63
<b>Weather Patterns</b> . . . . .	64
<b>Fire Regime</b> . . . . .	65
<b>Topography</b> . . . . .	65
<b>Fire Department Capabilities</b> . . . . .	65
<b>Water Supply</b> . . . . .	66
<b>Structure Characteristics</b> . . . . .	66
<b>Vegetation Fuel Models Used</b>	
<b>by Fire Behavior-Based Systems</b> . . . . .	66
<b>Fire Behavior Prediction</b>	
<b>System Fuel Models</b> . . . . .	67

#### CHAPTER 6

#### **A Detailed Look at Accepted Threat Assessment Methods / 69**

<b>Types of Assessments</b> . . . . .	69
<b>Limitations of</b>	
<b>Existing Methods</b> . . . . .	69
<b>Framing the Question and</b>	
<b>Determining the Approach</b> . . . . .	69
<b>Overview of Existing Standards,</b>	
<b>Codes, Research, and</b>	
<b>Assessment Methods</b> . . . . .	72
<b>Bates Bill Process</b> . . . . .	72
<b>California Building Code</b>	
<b>Hazard Severity Zone Mapping</b> . . . . .	76
<b>California Fire Alliance</b> . . . . .	77
<b>Colorado Springs</b>	
<b>FireWise Program</b> . . . . .	79

# Contents

Defensible Space Factor Study . . . . .	80
East Bay Fire Hazard Mitigation and Fuel Management Plan . . . . .	81
ecoSmart—Center for Urban Forest Research “FireWise” Component of ecoSmart . . . . .	83
Fire Behavior Prediction and Fire Growth Models— Fire Behavior Prediction System, BEHAVE, and FARSITE . . . . .	84
FireSmart . . . . .	85
FlamMap . . . . .	87
International Code Council International Urban Wildland Interface Code (2000) . . . . .	88
ISO FireLine . . . . .	89
National Fire Danger Rating System . . . . .	91
NFPA 1144 Standard for Protection of Life and Property from Wildfire . . . . .	92
NFPA 1141 Standard for Fire Protection in Planned Building Groups . . . . .	94
NFPA 1142 Standard for Water Supplies for Suburban and Rural Fire Fighting . . . . .	95
Oregon Department of Forestry—Identification and Assessment of Communities at Risk in Oregon . . . . .	96
Structure Ignition Assessment Model (SIAM) . . . . .	98
Wildfire Hazard Identification and Mitigation System . . . . .	98
Wildland/Urban Interface Fire Hazard Assessment Methodology . . . . .	101

## CHAPTER 7

### **Completing the Assessment and Developing a Plan / 105**

<b>Completing the Assessment of the UWI Fire Threat . . . . .</b>	105
Data Collection . . . . .	105
Data Analysis . . . . .	105
Outcomes of Assessment Methods . . . . .	106
<b>Devising the Best Solutions . . . . .</b>	106
<b>Variety of Options . . . . .</b>	106
<b>Involving the Community in the Deliberation on What to Do . . . . .</b>	107
<b>Creating a Fire Management Plan to Mitigate Threat . . . . .</b>	108
Types of Fire Management Plans . . . . .	109
Wildfire management plan • Pre-attack plan • Fuel management plan • Vegetation management plan • Safety element for general plan • Community Wildfire Protection Plan • Multi-hazard mitigation plan • Timber Harvest Plan	
Contents of the Plan . . . . .	110
Plan Components— Sample Plan Outline . . . . .	111

## CHAPTER 8

### **Gathering Forces to Implement the Best Solutions for Your Community / 117**

<b>Ready, Set, Implement . . . . .</b>	117
<b>Implementing a Program— Getting the Plan off the Shelf . . . . .</b>	117
Who Are the Doers? . . . . .	117
What Resources Are Available? . . . . .	118

# Contents

What Are the Incentives? . . . . .	118
Keeping the Community Motivated . . . . .	118
<b>Setting Priorities, Developing an Action Plan, and Monitoring Progress.</b> . . . . .	118
<b>Using Collaboration to Achieve Long-Term Solutions</b> . . . . .	119
Phase I—Initiation . . . . .	120
Phase II—Achievement . . . . .	121
<b>Developing Support for Solutions at All Levels</b> . . . . .	122
<b>Grassroots (Local Groups and Nongovernmental Organizations).</b> . . . . .	123
Concerned individuals • Community groups interested in fire safety • FireSafe councils • Environmental groups • Service organizations • Business organizations • Faith-based organizations • Homeowner organizations • Youth organizations • Animal groups • Emergency providers	
<b>Government Agencies— Federal, State, Regional, and Local</b> . . . . .	127
<b>Commercial Sectors.</b> . . . . .	127
CHAPTER 9	
<b>Tools to Reduce Threat / 129</b>	
<b>What Tools Are Available?</b> . . . . .	129
Tools to Reduce UWI Fire Threats. . . . .	129
Elements of Threat . . . . .	130
<b>Who Should Be Responsible?</b> . . . . .	132
Levels of Responsibility . . . . .	132

## Part Three Practical Solutions and Management Approaches: Best Practices

### CHAPTER 10

## Community Awareness and Ignition Prevention / 141

<b>Implications of a Worst-Case Scenario</b> . . . . .	141
<b>What Can Be Learned from This Scenario?</b> . . . . .	141
<b>Goals and Objectives of Best Practices</b> . . . . .	142
<b>Which Best Practices Are Most Helpful?</b> . . . . .	142
<b>Best Practices</b> . . . . .	142
<b>Engineering</b> . . . . .	143
<b>Mechanical Equipment Ignition Prevention.</b> . . . . .	143
Campfire ignition prevention • Roadside ignition prevention • Structure ignition prevention	
<b>Education</b> . . . . .	145
Enforcement	
<b>Alternative Practices— “Making Do”</b> . . . . .	147
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	148
<b>Issues Related to Sustainability</b> . . . . .	148

# Contents

## CHAPTER 11

### **Land Use Policy and Planning / 151**

<b>Implications of a Worst-Case Scenario</b> . . . . .	151
<b>What Can Be Learned from This Scenario?</b> . . . . .	151
<b>Goals and Objectives of Best Practices</b> . . . . .	152
<b>When Are the Best Practices Most Helpful?</b> . . . . .	152
<b>Best Practices</b> . . . . .	153
<b>Planning Processes</b> . . . . .	153
Land use designation and zoning ordinances • Project planning and review process • Guidelines, standards, codes, and local ordinances • General plan and safety element • Other planning-related tools	
<b>Alternative Practices–“Making Do”</b> . . . . .	163
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	164
<b>Issues Related to Sustainability</b> . . . . .	163

## CHAPTER 12

### **Community Design Solutions–New Residential Development Layout / 169**

<b>Implications of a Worst-Case Scenario</b> . . . . .	169
<b>What Can Be Learned from This Scenario?</b> . . . . .	169
<b>Goals and Objectives of Best Practices</b> . . . . .	170

<b>When Are the Best Practices Most Helpful?</b> . . . . .	170
<b>Best Practices</b> . . . . .	170
<b>Best Development Layouts</b> . . . . .	171
<b>Cluster Building Sites</b> . . . . .	172
<b>Designing Clustered Building Sites</b> . . . . .	172
<b>Alternative Practices–“Making Do”</b> . . . . .	173
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	175
<b>Issues Related to Sustainability</b> . . . . .	175

## CHAPTER 13

### **Community Design Solutions–Existing Residential Development / 177**

<b>Implications of a Worst-Case Scenario</b> . . . . .	177
<b>What Can Be Learned from This Scenario?</b> . . . . .	178
<b>Goals and Objectives of Best Practices</b> . . . . .	178
<b>When Are Best Practices Most Helpful?</b> . . . . .	179
<b>Best Practices</b> . . . . .	179
<b>Reduce Vegetative Fuel on Both Private and Public Lands</b> . . . . .	179
<b>Retrofit for Structure Survivability</b> . . . . .	179
<b>Improve Access</b> . . . . .	180
<b>Designate Shelter-in-Place and Safety Zones</b> . . . . .	181
<b>Improve Water Supply on a Community-Wide Basis</b> . . . . .	181

# Contents

<b>Alternative Practices– “Making Do”</b> . . . . .	181
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	181
<b>Issues Related to Sustainability</b> . . . . .	182

## CHAPTER 14

<b>Community Design Solutions– Utility Locations and Capacity (Overhead Power Lines, Gas Tanks, and Water)</b> / 185	
<b>Implications of a Worst-Case Scenario</b> . . . . .	185
<b>What Can Be Learned from This Scenario?</b> . . . . .	186
<b>Goals and Objectives of Best Practices</b> . . . . .	186
<b>When Are the Best Practices Most Helpful?</b> . . . . .	187
<b>Best Practices</b> . . . . .	187
Electric . . . . .	187
Liquid Petroleum Gas Tank (and other flammable fuel storage) . . . . .	187
Water Supply . . . . .	188
Water sources • Draft sites • Identification	
Standby Power . . . . .	190
<b>Alternative Practices– “Making Do”</b> . . . . .	190
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	190
<b>Issues Related to Sustainability</b> . . . . .	191

## CHAPTER 15

<b>Community Design Solutions–Road Networks for Access and Evacuation</b> / 193	
<b>Implications of a Worst-Case Scenario</b> . . . . .	193
<b>What Can Be Learned from This Scenario?</b> . . . . .	194
<b>Goals and Objectives of Best Practices</b> . . . . .	194
<b>When Are the Best Practices Most Helpful?</b> . . . . .	194
<b>Best Practices</b> . . . . .	195
Road design standards • Driveway design standards • Other key elements of the road network • Vehicle access • Street signs and addresses	
<b>Alternative Practices–“Making Do”</b> . . . . .	197
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	198
<b>Issues Related to Sustainability</b> . . . . .	199

## CHAPTER 16

<b>Community Design Solutions–Structure Design and Materials</b> / 201	
<b>Implications of a Worst-Case Scenario</b> . . . . .	201
<b>What Can Be Learned from This Scenario?</b> . . . . .	201
<b>Goals and Objectives of Best Practices</b> . . . . .	202
<b>When Are the Best Practices Most Helpful?</b> . . . . .	203

# Contents

<b>Best Practices</b> . . . . .	203
<b>Roof Coverings</b> . . . . .	205
<b>Openings</b> . . . . .	206
Window • Skylights, glazed doors, window walls	
<b>Doors</b> . . . . .	207
<b>Venting</b> . . . . .	208
<b>Chimneys</b> . . . . .	208
<b>Eaves</b> . . . . .	208
<b>Projections (decking,   porches, stairways)</b> . . . . .	208
<b>Siding</b> . . . . .	210
<b>Ancillary Components   and Buildings</b> . . . . .	210
<b>Nooks and Crannies</b> . . . . .	210
<b>Fire Sprinklers</b> . . . . .	210
<b>Smoke Detectors</b> . . . . .	212
<b>Alternative Practices– “Making Do”</b> . . . . .	212
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	213
<b>Issues Related to Sustainability</b> . . . . .	213

## CHAPTER 17

### **Community Design Solutions–Domestic Landscape Fuels / 215**

<b>Implications of a Worst-Case Scenario</b> . . . . .	215
<b>What Can Be Learned from This Scenario?</b> . . . . .	215
<b>Goals and Objectives of Best Practices</b> . . . . .	216
<b>When Are the Best Practices Most Helpful?</b> . . . . .	217

<b>Best Practices</b> . . . . .	217
Selecting plant types • Defensible space • Fire-resistive planting • Desirable plant characteristics • Undesirable plant characteristics • Fuel load reduction • Noncombustible zone • Yard zone • Transition zone • Access roads • Fencing • Strategic locations • Proper maintenance • Disposal and collection of debris	
<b>Alternative Practices– “Making Do”</b> . . . . .	225
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	226
<b>Issues Related to Sustainability</b> . . . . .	226

## CHAPTER 18

### **Community Design Solutions–Wildland Fuels / 229**

<b>Implications of a Worst-Case Scenario</b> . . . . .	229
<b>What Can Be Learned from This Scenario?</b> . . . . .	230
<b>Goals and Objectives of Best Practices</b> . . . . .	231
<b>When Are the Best Practices Most Helpful?</b> . . . . .	233
<b>Best Practices</b> . . . . .	233
General Considerations for Wildland Fuel Management . . . . .	233
<b>Management Best Practices by Vegetation Types</b> . . . . .	234
<b>Grassland Fuel   Management Strategies</b> . . . . .	235
<b>Shrub Type Fuels</b> . . . . .	236
<b>Successional Scrub</b> . . . . .	238
<b>Coniferous Forest</b> . . . . .	239

# Contents

Mature Eucalyptus . . . . .	239
Mixed Hardwood Woodlands and Forests . . . . .	241
Riparian Forest . . . . .	242
Available Techniques for Wildland Fuel . . . . .	243
<b>Alternative Practices–“Making Do”</b> . . . . .	244
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	244
<b>Issues Related to Sustainability</b> . . . . .	245

## CHAPTER 19

<b>Emergency Service Responses and Residents’ Response to Fire / 249</b>	
<b>Implications of a Worst-Case Scenario</b> . . . . .	249
<b>What Can Be Learned from This Scenario?</b> . . . . .	250
Life Safety Is the Highest Priority . . . . .	251
Learning from Australia . . . . .	252
<b>Goals and Objectives of Best Practices</b> . . . . .	253
<b>When Are the Best Practices Most Helpful?</b> . . . . .	253
<b>Best Practices–Emergency     Services Responses</b> . . . . .	253
Coordination • Response level • Information management • Initial attack capability and firefighter safety	
<b>Best Practices: Resident Response–     Evacuation/Shelter in Place</b> . . . . .	256
Community safe-to-stay areas • Checklist of best practices related to evacuation or shelter in place	

<b>Alternative Practices–“Making Do”</b> . . . . .	261
<b>Typical Reasons Best Practices Are Not Used</b> . . . . .	262
<b>Issues Related to Sustainability</b> . . . . .	263
<b>Complexity of Response</b> . . . . .	263

## Part Four Challenges and Strategies for Implementing Solutions

## CHAPTER 20

<b>Existing Industries with Vested Interests / 267</b>	
<b>Insurance Industry</b> . . . . .	267
Industry Description . . . . .	267
Stumbling Blocks . . . . .	268
Stepping Stones . . . . .	268
<b>Local Fire Departments/ Fire Protection Districts</b> . . . . .	269
Industry Description . . . . .	269
Stumbling Blocks . . . . .	269
Stepping Stones . . . . .	270
<b>Landscape Industry</b> . . . . .	270
Industry Description . . . . .	270
Stumbling Blocks . . . . .	271
Stepping Stones . . . . .	271
<b>Developers and Site Planners</b> . . . . .	272
Industry Description . . . . .	272
Stumbling Blocks . . . . .	272
Stepping Stones . . . . .	272
<b>Building Industry</b> . . . . .	273
Industry Description . . . . .	273
Stumbling Blocks . . . . .	273
Stepping Stones . . . . .	274

## Contents

<b>Real Estate Industry</b> . . . . .	274
Industry Description . . . . .	274
Stumbling Blocks . . . . .	275
Stepping Stones . . . . .	275
<b>Forest Products Industry</b> . . . . .	275
Industry Description . . . . .	275
Stumbling Blocks . . . . .	276
Stepping Stones . . . . .	276
<b>Utilities: Gas and Electric Companies, Water Companies, Communications Companies (Telephone/ Television, Cable, Internet)</b> . . . . .	276
Industry Description . . . . .	276
Stumbling Blocks . . . . .	277
Stepping Stones . . . . .	277
<b>Manufacturers and Vendors with Special Interests Related to UWI Fire</b> . . . . .	277
Industry Description . . . . .	277
Stumbling Blocks . . . . .	279
Stepping Stones . . . . .	279

### CHAPTER 21

#### **Environmental Challenges / 281**

<b>Major Environment-Related Laws and Policies</b> . . . . .	281
National Environmental Policy Act . . . . .	281
California Environmental Quality Act . . . . .	282
Federal Endangered Species Act, California Endangered Species Act, and the California Plant Protection Act . . . . .	284
Clean Water Act and Wetland Regulations . . . . .	285

<b>Clean Air Regulation and Agricultural Burning Guidelines</b> . . . . .	285
<b>Environmental Permit Approval and Agency Review: A Challenge for Fuel Reduction Projects</b> . . . . .	286
<b>Potential Environmental Impacts and Mitigations</b> . . . . .	288
Aesthetics • Air quality • Biological resources • Cultural resources • Geology and soils • Hazards and hazardous materials • Burn permit • Hydrology and water quality • Noise • Transportation and traffic	

### CHAPTER 22

#### **Biomass Utilization and Disposal / 301**

<b>When Is Biomass Utilization and Disposal Relevant?</b> . . . . .	301
<b>What Is Biomass?</b> . . . . .	301
<b>Why Are Utilization and Disposal a Challenge?</b> . . . . .	302
<b>Disposal Issues</b> . . . . .	303
<b>Overcoming Productive Biomass Use Obstacles</b> . . . . .	303
<b>Creative Approaches to Biomass Reduction and Utilization</b> . . . . .	306
<b>Current Policy, Legislative Support, and Funding Programs</b> . . . . .	307
<b>Emerging Values</b> . . . . .	310

# Contents

## CHAPTER 23

<b>The Challenge of Changing Human Behavior / 313</b>	
<b>Using the Human Behavior Triangle to Influence Change</b> . . . . .	313
<b>Motive Factors</b> . . . . .	313
Lack of awareness • Denial • Fatalism • Futility • Irresponsibility • No incentive • Insurance • Unnaturalness • Aesthetics and function • Discomfort	
<b>Means Factors</b> . . . . .	315
Costs • Lack of knowledge • Disposal	
<b>Opportunity Factors</b> . . . . .	315
Illegal • Lack of ownership

## Preface

**F**ire is a natural, reoccurring event in many wildland ecosystems. As a natural event, wildfire is not necessarily a disaster. When wildfire interacts with the human-made vulnerabilities at the edge of an urban area, however, it can result in catastrophe. Where human settlement has created communities that adjoin wildland areas, it is critical to recognize the force of fire and act to minimize the potential damage before a fire begins.

Land use decisions, building codes and standards, fuel management, and preparedness all influence a community's vulnerability. A fire's impact on human life, property, and natural resources can depend on whether the community is primarily residential or institutional and whether it adjoins a watershed, open space, or park lands. The types of structures and vegetation associated with human habitation can help determine the extent of damage from fire. Reduction of these vulnerabilities is a community-wide, multi-disciplined responsibility that is most effective when coordinated regionally.

### Goals of This Book

*Managing Fire in the Urban Wildland Interface* is intended to increase the reader's understanding of the fire problem in the UWI and to present strategies and practical solutions that can be customized for a specific community's fire threats. Designed as a reference, the book is laden with constructive examples and leading questions. It provides information on codes and laws, and includes case studies as well as tables, suggested websites, and other source material.

The goal is to present strategies and practical solutions that foster a respectful relationship to fire. Achieving this vision requires proactive strategies that focus on prevention and mitigation actions that reinforce one another. Ideally, periodic wildland fires should be able to burn through a

community without burning out the residents, destroying homes, or causing undue damage to the environment. This requires actions within the community and also in the natural environment so that both urban and wildland areas bear the burden of eliminating possible catastrophic fire.

Throughout the book we express a belief in the strength of shared responsibility and community-wide planning, as well as the need to identify issues and develop solutions collaboratively. Its goal is to be equally useful to individuals who want to reduce the threat of fire around their homes, resource managers developing a vegetation management program, or consultants writing a fire management plan for a new subdivision.

The examples draw heavily on our experiences with UWI fire in California. Many of the best practices are specific to the state's environmental conditions, legal system, land planning processes, and local attitudes. Across the nation, however, UWI fire threats may be similar, with solutions more alike than different and community values reflective of collective concerns. That said, individual communities—even if separated by only a city limit—will need to customize their approach to address their unique set of threats and develop acceptable solutions within their own legal, political, and social framework. The authors also recognize the critical value of the individual landowner and the importance of managing land in collaboration with public agencies, nonprofit organizations, and others. The book will help the reader understand various approaches that have worked successfully and how these ideas might be tailored to a specific community or fire threat.

### **How the Book Is Organized**

The book is divided into four parts that describe a sequential process:

- Part One presents an overview of the threat and key elements of UWI fire
- Part Two describes a range of threat assessment methods and illustrates the process of customizing solutions for local circumstances
- Part Three sets forth practical solutions and best practices
- Part Four focuses on strategies to overcome implementation challenges

For those who are beginning a planning process, sequential steps are presented that will help develop a collaborative community-wide program to address UWI fire threats.

### **Who Can Benefit?**

*Managing Fire in the Urban Wildland Interface* is meant to meet the needs of professionals, interested lay-people, and advocates for community fire safety and fire use. We believe that a wide breadth of disciplines should be

involved in reducing the threat from UWI fire. Until now, too few people and too few disciplines have offered their expertise and perspectives in important planning and implementation needed for fire-safe communities. This book attempts to bridge the gap between disciplines for better communication and fire safety outcomes. People who will benefit might include any or all of the following:

- State and federal agency staff
- City, county, or regional planners, as well as planning commissioners or members of a design review board active in community planning or resource planning who are updating a general plan, preparing a land management plan, developing a specific plan, involved in a CEQA or NEPA environmental review process, or reviewing new construction
- Developers, land planners, architects, or landscape architects involved in pre-planning or project-specific design for new developments
- Code officials reviewing those plans
- Individual property owners or homeowners building a new home or who have existing homes they want to renovate or better maintain
- Fire protection engineers interested in threat assessment and best management practices
- Fire chiefs, fire marshals, and fire prevention and emergency services officers responsible for community safety at an operations level
- Elected officials or their staff members who want a better understanding of wildland fire, stakeholder interests, and potential community-based solutions
- Attorneys interested in best practices, legislation, policies, laws, codes, and standards that guide UWI fire planning
- Land managers and policymakers (managers of open space, parks, or watersheds or other large landowners, etc.) responsible for managing wildlands or siting new facilities or uses
- Insurance company management interested in reducing exposure to loss from UWI fires
- Business and community leaders

### **Should You Read This Book?**

*Managing Fire in the Urban Wildland Interface* may be useful if:

- A catastrophic fire in your community provides an opportunity for new codes and practices for rebuilding structures and infrastructure
- You are proposing a new development
- Your community is concerned and has a new perception of fire threat due to fires elsewhere

- You are developing land management plans such as a general plan, specific plan, resource management plans, project-specific plans, or the safety element of a general plan
- A new development is planned near your existing community
- You are new to the area and want to know if wildland fire is an issue for you and your home
- Your fire management/mitigation plan is highly contested and you need to salvage at least part of it to get back on track
- Someone made you do it:
  - You are required to complete a Fuels Management Plan as a condition of approval for a new development
  - To receive funding, you must identify fuel reduction projects and gain approvals for a plan created by a collaborative planning process, such as a Community Wildfire Protection Plan
  - Your city wants to comply with an existing law such as the Disaster Mitigation Act 2000 (DMA 2000) to maintain eligibility for funds from the Federal Emergency Management Agency

### **Unique Features**

While many of the strategies and practical solutions discussed here are not new, the book presents a number of unique features. Readers will find useful summaries and analytical tools not found in other references dealing with UWI fire mitigation, including:

- A comparison of the many threat assessments to help find the method most appropriate for a particular setting, available data, resources, and vulnerabilities; chapters 5 and 6 describe how to choose the right method from various assessment methods that already exist
- Components of a successful collaboration; chapter 8 identifies the two phases necessary to achieve long-term solutions and offers tips to achieve the most effective process
- Ways to further reduce the potential impact of UWI fire by stretching the roles of key community members in responding to the cycle of loss; chapter 8 shows how to develop support for solutions at every level during each of the four stages in the cycle of loss
- Four separate categories of tools that can be used to reduce various elements of threat: awareness, policy planning, community design, and response; chapter 9 summarizes the tools available and describes the potential for various levels (individuals and community, regional, state, and national entities) to participate in making a community more resistant to wildland fire
- Best practices with practical solutions that can be directly applied to projects; Part Three (chapters 10 through 19) is devoted to best

practices, with each chapter not only explaining issues, goals, and objectives, but also when the practices are most helpful, potential alternatives, and issues related to adoption and sustainability

- Strategies for implementation and ways to overcome common challenges; Part Four (chapters 20 through 24) addresses issues such as vested interests, environmental challenges, biomass, behavior change, and funding
- Fuel mitigation projects and potential environmental impact; chapter 21 provides a quick checklist
- Key characteristics of different common funding strategies; chapter 24 presents various funding strategies, including “Funding Mechanisms at a Glance”
- Details the six most commonly used techniques for wildland fuel management; Appendix B describes these techniques, which encompass hand labor, mechanical treatments, tree removal, prescribed burning, grazing, and chemical treatment

## **Keys to Success**

*Managing Fire in the Urban Wildland Interface* lays out proactive mitigation strategies for achieving community-wide protection. Success hinges on a number of key factors. First, strategies have to be accepted not only at a personal level, but throughout the community, and that takes more than a few homeowners, land managers, or government officials. Secondly, the community must develop both the desire and ability to manage the inherent wildfire risk to its community and adjacent wildlands.

- Dialogue to change the traditional ways of addressing fire and its increasing risk must be fostered. This means discussing issues such as expectations for the future of adjacent wildlands and the health of that environment. Does the community want a natural fire regime? Can it accept the attendant disturbance, potential risk of damage to life and property, and a change of aesthetic?
- Aesthetics of urban sections of the community must be examined, including preferences for wood structures, dense vegetation, or narrow roads. Can the aesthetics be met by methods that also increase structure survivability and reduce landscape flammability?
- Private property rights versus established codes and rules as well as the desire to develop fire protection plans and requirements must be addressed. Is the community willing to establish new standards to reduce fire hazards that can be enforced on private land?
- Cost and the issues associated with implementation of mitigation measures should be reviewed. Is the community willing to help finance additional mitigation on public land? Can it provide new financial

aid for those on a fixed income to reduce hazardous vegetation on private property?

Finally, in the end, the actual actions a community undertakes to reduce fuels and make structures more survivable are what is most crucial in being able to live more compatibly with the risk of fire.

## About the Authors

**T**he authors of *Managing Fire in the Wildland Interface* offer expertise in a wide range of subject matters spanning from fire suppression, natural resource management, fire science, urban planning, landscape architecture, policy planning, with experience in both the private and public sector. They have delivered technical papers and presentations, both jointly and as individuals, to various audiences including local neighborhoods, the League of Cities, American Planning Association, National Fire Prevention Association, and the International Association of Fire Chiefs. It is the combination of these disciplines that make this book unique.

**Kenneth Blonski** is a Fire Chief with the East Bay Regional Park District responsible for fire management in more than 65 parks and 100,000 acres in the urban wildland interface. As a career U.S. Forest Service employee he served on the Redding Hot Shot Crew, as Fuels Management Officer on the Plumas and Lassen National Forests, Pacific Southwest Regional Fire Suppression Coordinator, Fire Planner for the region, Type I Operations Section Chief, and finally as Deputy Director Fire Management. He joined the University of California Extension to create a program that addresses urban wildland fire issues and has served on the Board of the California Fire Safe Council and the Advisory Council of the Bay Area Air Quality Management District.

**Cheryl Miller** is a registered Landscape Architect in private practice in Oakland, California. Since the Oakland/Berkeley Hills Tunnel Fire in 1991, she has been active in wildland urban interface fire planning. Her professional work extends to a wide range of construction and planning projects in the public sector. While managing multi-disciplinary teams to address complex issues, she adds her skills in resource management, public

facilitation, policy planning, and consensus building. She has served on the Board of the California Fire Safe Council.

**Carol L. Rice** is a natural resource manager and fire ecologist in private practice developing fire management plans with Wildland Resource Management, Inc. Clients range from homeowner associations, private developers, insurance companies, cities, county and state governments, watersheds, and conservancies. She has been in practice for more than 30 years based in Alamo, California. She was a founder and board member of the International Association of Wildland Fire and the Wildfire Section of the National Fire Protection Association. She is the past president of the California-Nevada-Hawaii Fire Council.
