**Touch the biggest number and count on!**

**Any number plus zero is that number!**

6 + 0 = 6

7 + 0 = 7

100 + 0 = 100

# Feed For Thought

Please read carefully and reflect about your teaching beliefs.

Current research indicates that the use of word facts may not be the most appropriate method to teach young students their math facts. Many teachers interpret the Standard within the Common Core Standards as students knowing their basic math facts with accuracy and speed. Fluency, instead, should be considered to be mathematical confidence with numbers and the understanding that numerical strategies and concepts are or can be flexible to the specific math task.

Research suggests that up to one-third of all students, especially areas and anxiety when presented with tests of basic math computation, that are slow. The process of solving math computations are held in the working memory of the brain. When stressed, the working memory becomes blocked, and students have difficulty processing information, even if it was already previously learned.

Researcher know from mapping brain images using modern technology that students do recall from memorization if it is presented in a positive way and is not the only method used. Address that allows students to strategies using number and good reasoning, along with computational tests (recognizing that a 100 timed, correct number of and symbolic concepts. Speed does not correspond with deep understanding. Automaticity can be reached through understanding of numerical relations, and advanced thinking about number strategies.

Regardless of your position or beliefs, the fact family practice included in the product, can be beneficial for all students, if presented in a fun and non-competitive manner. Students should be working to improve their own learning, and progressing at their own pace.

All students enter with fact family one and move to nine, before starting with the subtraction facts. This activity can be used twice weekly. Although the activity is not timed, do not allow students to go beyond ten minutes. The average first grader has a sustained attention span of 10 minutes.
