XL

ADULT XL

8.75" from ear to ear, 7.5" nose bridge to under the chin

To measure your ear-to-ear length without a measuring tape, take a string or ribbon and extend it from the front of one ear over the nose to the front of the other ear. Measure the string on a ruler. Your mask should range from this string's full length to about 2" shorter.

To measure your nose-to-chin length without a measuring tape, take a string or ribbon and extend it from the top of your nose over your chin and about 1" towards your neck. Measure the string on a ruler. Your mask should range from this string's full length to about 1" shorter.

Our masks are made by humans so their measurements may vary slightly between each cut by 1/4" or so, but they will always cover the nose, mouth, and cheeks comfortably to keep you protected.

If in doubt, order up a size. The elastic straps can be tightened, but the mask size is fixed.
