"I hit a home run when I found the Murano Mahogany ceiling panels;
it had the perfect Yachty style and a great acoustic rating"

Ray Lewis, Director, Balboa Yacht Club

MURANO ACOUSTICS SERIES

SURFACE OPTIONS

Natural wood veneer selection consisting of six species – White Oak, Maple, Cherry, Sapele, Bamboo Natural and Bamboo Caramelized. Custom wood veneers may be available at an additional cost.

MANUFACTURE

The Murano Acoustics panels consist of a natural wood veneer laminated to an ECOBoard or MDF substrate and black acoustic SoundTex™ felt adhered to its back. Panels are 18 mm thick and are manufactured with a tongue and groove edge profile, creating a perfect finish when installed. Panels are normally attached to wood furring strips.

DESIGN CONSIDERATIONS

The Murano Acoustics product line is very conducive to almost any environment. Because of their wood foundation, the Murano Acoustics panels cannot be supplied as curved panels. However they can be indexed or stepped around a gentle radius giving the appearance of a slow staggered curve. The radius should be greater than 16 feet to achieve this curved effect.

FIRE SAFETY

When requested, the Murano Acoustics panels are fabricated using class A fire rated materials. The panel cores and/or finish coatings shall comply with fire code requirements. Submittal data is based on supplier tests. Due to the variety of patterns and veneer combinations available that differ on a project-by-project basis, panel composite testing has not been completed.

Murano Acoustics offers five options of panel construction based on the requirements of the installation:

Option 1: Non fire rated MDF substrate, natural wood veneer panel face and clear finish coating.

Option 2: Non fire rated MDF substrate, natural wood veneer panel face and clear fire retardant varnish.

Option 3: Class A fire rated ECOBoard substrate, natural wood veneer panel face and clear finish coating.

Option 4: Class A fire rated ECOBoard substrate, natural wood veneer panel face and clear fire retardant varnish.

Option 5: Class A fire rated MDF substrate, natural wood veneer panel face and clear finish coating.

Prices vary depending on the selected option.

WEIGHT

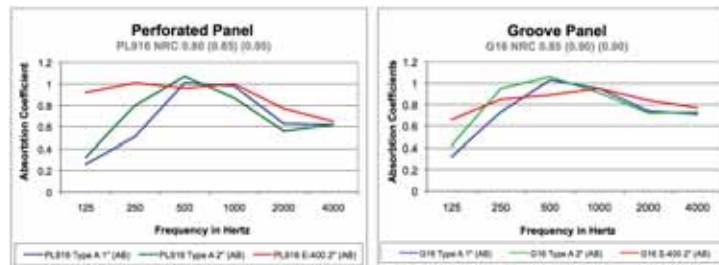

Normal panel weight: depending on the pattern, up to 3 pounds per square foot.

MAINTENANCE

The Murano Acoustics panels are very easy to maintain. Panels can be cleaned with non-abrasive cleaners which are suitable for wood veneers.

ENGINEERED FOR SOUND CONTROL

The Murano Acoustics product line is one of the most advanced, durable and beautiful absorbing products available today for reducing reverberant noise levels in many environments. Most patterns are performance-tested by a U.S. national certified lab.

With a wide array of styles and finishes to choose from, you can achieve the space you've envisioned for your clients at a price they can afford with Murano Acoustics' Series.

Contact Murano Acoustics or your authorized dealer today for more information and/or free sample panels. We look forward to serving you and becoming your partner in creating acoustically superior, breathtakingly beautiful interiors.
