## Yellow Cream Patch

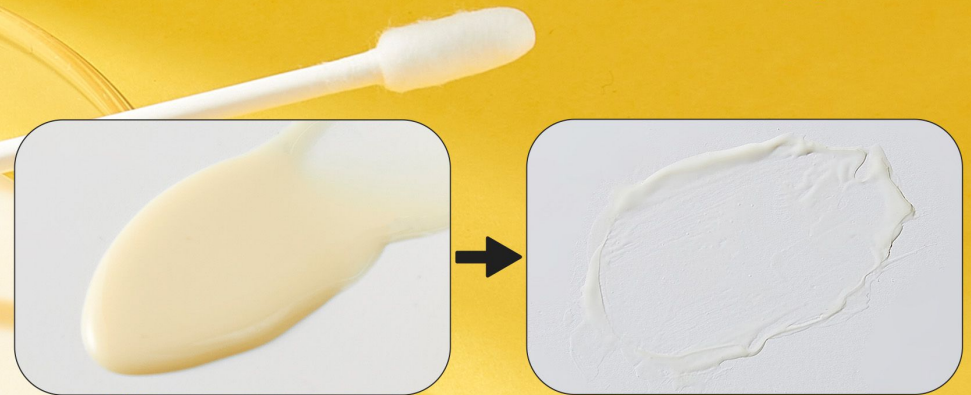

*Cream-to-film formula for effective trouble care*

*A new paradigm of spot treatment,  
cream-to-film cellulose patch*

*Korea's leading beauty app, Hwahae,  
awarded our patch first place in  
the face patch category for  
the second half of 2022.*

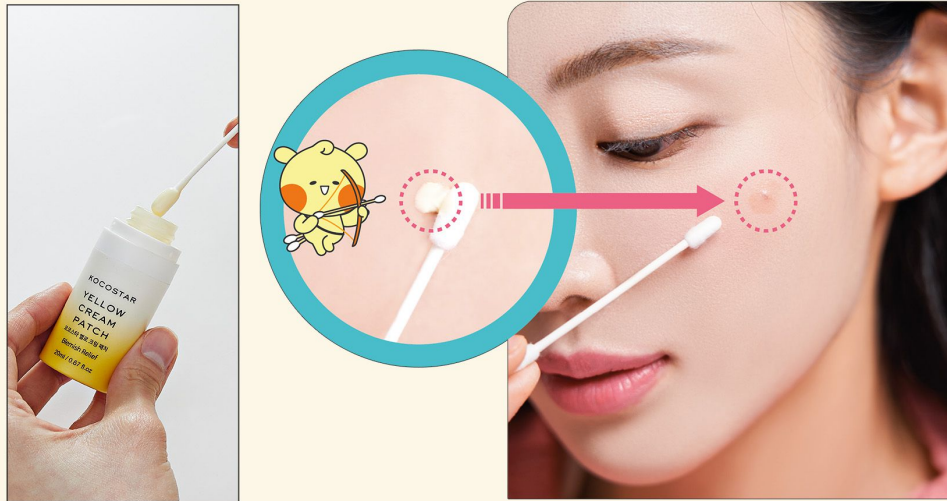

**Fragrance Free  
Film-forming Cream**

*" the all-in-one blemish solution you've been waiting for! "*

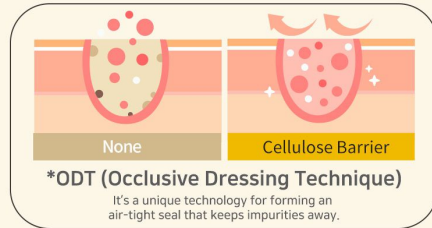

# The Next Generation of Blemish Relief

Yellow Cream Patch contains patented cellulose extracted from a natural source. When applied to blemish, it forms a thin and flexible barrier that helps active ingredients enter the epidermis for fast and effective soothing.

The barely visible film stays firmly on the skin throughout the day (without adhesive!) and protects the troubled spot to promote healing. It doesn't curl on the edges like plastic dot patches.

“ Creamy formulation transforms into a transparent barrier in 5 minutes and delivers active ingredients to soothe and control blemishes. ”

# Say goodbye to sticky dots! Here's **Yellow Cream Patch** the film-forming solution

## Point 01

Forms a clear cellulose film that works as a barrier

## Point 02

Effectively soothes troubled skin with a gentle formula

## Point 03

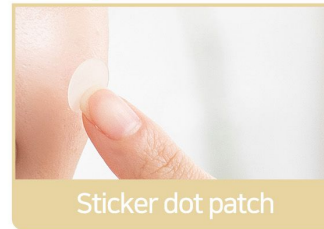

Clinically proven to reduce blemish and prevent new breakouts

## What differentiates KOCOSTAR #YellowCreamPatch from sticker dot patches

Unlike spot treatment patches with uniform size, our new blemish solution allows you to create a soothing barrier in custom size and shape.

**For best results, apply when you notice a slightly reddish spot.**

	Function	
Covers breakouts	Helps prevent breakouts and protects the affected area	✓
Thick sticker-type difficult to put on makeup	Cream-to-film solution suitable to use before makeup	✓
None or minimal amount	Packed with cellulose, sulfur, salicylic acid, and tea tree leaf extract	✓
Adhesive layer may cause irritation	Clinically proven hypoallergenic	✓

# Hwahae Consumer Review

Participants: 296 verified users

Survey period: Sept 21 - Oct 7, 2022

**95%** agree the formula is gentle

**92%** reported they didn't feel any irritation on the skin

**89%** are satisfied with the results

**89%** are pleased with the skin absorption rate

## 01 Testimonial

I was frustrated to have breakouts the day before my wedding, but they were gone by the next morning!

## 02 Testimonial

My skin always gets irritated during my period. With this product, however, I can soothe it without having to worry.

## 03 Testimonial

I have naturally sensitive skin, and it has been a hassle to hide blemishes. Now I can confidently reveal bare skin.

\*Individual results may vary, and testimonials are not claimed to represent typical results.

## Sterile Cotton Swab (50ea) OEKO-TEX® Certified

*The transparent barrier stays on your skin for 7 up to 8 hours, allowing you to confidently wear makeup throughout the day. Simply dab with a sterile OEKO-TEX® cotton swab for best results.*

## How to Use

1. Cleanse the affected area.
2. Take out a sterile cotton swab from its packaging.
3. Dip the cotton swab into the solution.
4. Dab on the surface of blemish.  
*[Tip] It's easier to remove later if you apply a thick layer.*
5. Wait until the solution dries clear. It usually takes 5 to 10 minutes.  
*[Tip] Feel free to put on makeup afterward. If using before bed, remove the film the next morning by softening it with warm water.*

## FAQ

- **The product remains even after cleansing my face. What should I do?**  
Cellulose film has excellent adhesion to provide the optimum environment for your blemish to heal. Soften it with warm water and gently roll from edges.
- **Why does the product bottle come with two lids?**  
We used a double-lid system to prevent the loss and contamination of active ingredients. Pull the first one and turn the second one clockwise to open.
- **What scent does the product have?**  
The product is fragrance-free to ensure safety on sensitive skin. You may notice a unique smell of cellulose and other ingredients because there is no masking scent.
- **How thick should I apply?**  
There is no correct answer. If applying a thick layer, it will be easier to remove later. We recommend doing so at night before bed (Please lay down after it completely dries).  
If applying in the morning, evenly spread a small amount to make it less noticeable.
- **Can I use it on spots ready to pop?**  
Our product is designed to use in the early stages of blemish. Avoid using on emerging spots filled with puss as you may feel a sting or minor irritation.
