

SINCE 1948

Heath Tile

Specifications and Pricing | Issued June 2024

Our love of beautiful materials finds its purest expression in Heath Tile. Perfectly imperfect tiles reflect an intention, a pride in craft, the truth of quality, and the beauty in simplicity. They are made by real people, glazed using traditional techniques, and fired and finished in our San Francisco tile factory.

About Heath Tile

Heath Tile first earned wide recognition when Edith Heath won the prestigious AIA Industrial Arts Medal in 1971 for her installation at the Norton Simon Museum in Pasadena. Her approach to design—which we continue to carry forward—celebrates the natural character of our brown California clay body and the inherent unpredictability of glaze chemistry. Heath Tile's iconic aesthetic supports truly unique and varied installations, ranging from home environments to large-scale public spaces. Today, Heath Ceramics is a B Corp and has earned certifications from Declare and the California Green Business Network.

As a B Corp, Heath Tile is part of a global community of businesses that meet high standards of social and environmental impact.

Heath Tile is certified by Declare for chemical transparency, making it an excellent fit for LEED, WELL and Living Building Certified buildings.

Our Tile Collections

Heath Tile is Made-to-Order: you pick your size, shape, and glaze, we make it just for you. Made-to-Order tile has a lead time that varies based on collection and production queue.

Classic Field p. 10

21 sizes, 90+ glazes, 36 patterns

Our Classic Field collection offers 21 shapes and sizes. Depending on context and choice of pattern, glaze, and grout, the look can range from quiet and meditative to dynamic and vibrant.

Mural p. 13

2 patterns, 15 colorways

Kinetic and subtly dimensional. Mural is our series of pre-configured pattern combinations of matte and glossy tile. Designed for large-scale installations, and equally at home in more modest spaces.

Dimensional p. 15

5 shapes, 90+ glazes

Our most characterful shapes. Four were reintroduced in 2003 after 30 years of lying dormant in the Heath factory, while our latest—Crease—was designed in 2009 in collaboration with One & Company Design. Sculptural, three-dimensional surfaces make an installation with our Dimensional collection as much a stunning and unique art piece as it is functional.

Stan Bitters Tile p. 16

3 shapes, 8 glazes

The word “monumental” is often used to describe Stan Bitters’ ceramic sculptures. But even at a small scale, this legendary American artist’s expression has a rare boldness. The Stan Bitters tile line represents the kind of collaboration we love—an opportunity to bring a sculptor’s work to life in a format that fits the home. Bitters’ tactile, dimensional approach is truly one-of-a-kind, and our expanded glaze palette adds new shades to our earthy originals.

Dual Glaze p. 17

6 sizes, 7 glaze blends

Taking variation and contrast to a new level, multiple glazes are overlaid on a single tile, creating the illusion of varying tile sizes within a single installation. Offered on both rectangular and triangular tile sizes, compelling in a random blend or arranged into geometric patterns.

Looking For Inspiration?

Visit heathceramics.com/tile or come into our showrooms to review samples and inspiration boards in person and meet our showroom team. If you are ready to take your project further, connect with a tile specialists for a consultation.

Dimensional

Stan Bitters

Trims

*Premium sizes.

** Lengths up to 12" available. Please contact a Tile Specialist for more information.

† Nominal tile dimensions are derived from the L x W of the rectangular module the shape fits within.

†† Not intended for use on wall corners.

NOTE: Drawings not to scale.

A Guide to Tile and Glaze Qualities

TILE QUALITIES

The tile we make is perfectly imperfect. We celebrate the variation inherent in our product. Because each piece is unique, it's important that we share a few tips to keep in mind as you develop your project to help ensure your Heath Tile installation is successful and meets expectations.

Applications

Heath Tile is very durable and thus suitable for most interior and exterior applications, including warm and cold climates, residential and commercial floors, walls, counters, showers, baths, swimming pools, spas and fountains.

Size and Length Variation

Our manganese clay tile shrinks about 10-12% in the production process. Heath Tile is a handmade product, and as such variability is inevitable. Differences in size and length will be more apparent on longer tiles. You can expect between 1/16" and 1/4" of length tolerance, see table to the right for tolerances specific to each tile size. Length tolerance means the tile can be larger or smaller than the average tile size by this amount. This length tolerance amount reflects an order that includes 20% overage. To achieve an installation layout that requires less length variation, increased overage is recommended. See how nominal sizing relates to grout spacing on page 6. Please contact a Tile Specialist for more details.

Lengthwise Bowing

If you force an elastic material, like clay, into a mold, it will attempt to regain its original shape as it moves through the production process. For this reason, you can expect your tile to have what we deem to be an acceptable amount of lengthwise bowing, especially in our longer shapes. This can be accommodated by a wider grout line and thoughtful placement during installation.

Surface Undulation

Surface undulation can occur for the same reason that bowing occurs — an elastic material is forced into a flat mold. Undulation can occur anywhere on the surface, and could include a slightly raised corner or edge.

Modularity

Not all of our tile sizes are modular with themselves or with other sizes. Additional overage may be necessary to achieve your design.

Tape Mounting

Nothing beats a hand installation of handmade tile, however some of our smaller tiles can be ordered tape-mounted onto adhesive sheets (rather than the more common mesh backing) — set patterns apply. Our clear tape mounting should be considered as a visual guide for assembling tile pieces, not a modular assembly. Adjustments do need to be made during installation (pre-grout), including slicing/moving of individual pieces and/or partial modules in order to achieve optimum grout spacing and variation blending.

Tile Dimensions + Performance		
type	+/-	tile size
size/length	1/16"	1x3", 2x2", 3x3", little diamond, 3.5" hex
size/length*	1/8"	2x4", 2x6", 3x6", 4x4", 6x6", wide hex, half hex, 4" right triangle, 5" hex
size/length*	3/16"	2x8", 2x9", 3x9", 4x8", dimensional shapes
size/length*	1/4"	2x12", 3x12", 6x12", Stan Bitters Tile
thickness (5/16")	1/16"	all except Stan Bitters Tile
thickness (1/2")	1/16"	Stan Bitters Tile
lengthwise bow	up to 1/8"	2x8", 4x8", 2x9", 3x9", 2x12", 3x12", 6x12"
<p>Water Absorption - .5%-3% average (impervious = .5% or less, vitreous = .5%-3%)</p> <p>Weight - approximately 3 1/2 lb per sq.ft. Classic Field (5 lb per square foot for Dimensional Collection, 5 1/2 lb per sq.ft. for Stan Bitters tile)</p> <p>Bond Strength - ASTM C482-20; 295 psi average (50 psi required)</p> <p>Breaking Strength - ASTM C648-20; 805 lb average (250 lb or greater required)</p>		

* Tile sizes longer than 6" in any direction may require additional order overage if size variation presents an issue for intended layout. Please contact a Tile Specialist for more information.

A Guide to Tile and Glaze Qualities

GLAZE QUALITIES

Use this guide in combination with the glaze palette tables on the following pages.

Glaze Variation

Variation in the glaze color/texture is rated 1-5+. Glazes rated 1 exhibit very little variation; higher ratings show very high tonal, textural, hue, and finish shifts. For glazes with a variation of 4 or above, it is recommended to request several samples to accurately depict the effect the variation will have on the installation. Variation in color and finish cannot be specified. Glossy and matte formulas are unique to each glaze.

Acid Resistance

Some glazes are not acid resistant and may change over time with repeated/prolonged exposure to acidic materials. "Good" glazes are recommended for all applications. "Medium" glazes may require additional care or annual sealing depending on the application. "Sensitive" glazes are not recommended for high-traffic or heavy-use applications. Please contact a Tile Specialist for more information.

Pools

Glazes NOT recommended for use in pools (without a +) can discolor when exposed to acidic materials and/or common pool chemicals.

Residential Floors

Softer glazes and glossy finish glazes are not recommended for flooring as they are slippery when wet and will show scratches more readily.

Commercial Floors

Commercial floors generally require a high slip-resistance rating based on industry standards. While matte glazes would be more suitable for commercial use, individual testing must be performed on a case by case basis. Please contact a Tile Specialist for more information.

Crazing

Crazing is the development, over time, of small surface cracks that do not affect the structural integrity of the tile. No guarantee is made against crazing.

INSTALLATION + GROUTING CONSIDERATIONS

No tile installations look good before grouting. Here are our top tips for ensuring a successful installation. Visit our website at heathceramics.com/tile for additional installation advice and ideas.

Planning

Meticulously plan your layout. The time taken for prep and placement will greatly impact the finished result. Pre-sort tile by size, color, and finish. Blend or strategically place. To achieve a leveled surface, use a deeper comb of mortar or thinset to allow for variations in tile thickness and architecture.

Grout Release and Sealing

Matte, crackle glazes, and unglazed tile will benefit from applying a grout release product or pre-grout sealant before grouting to aid in grout haze removal and prevent staining from saturated grout colors. Be sure to follow the manufacturer's instructions for these products and test before applying to your installation. Once installed, textured matte, crackle glazes, unglazed, and acid-sensitive tile should be sealed after grouting to protect the grout and glaze, and potentially re-sealed annually if in a wet location or food prep area. This is particularly important for crackle glazes as the crackle will continue to develop.

Grout

Grout is the glue that pulls the entire installation together. Give special consideration to choosing the right color and be sure to use a sanded grout formulated for 1/8 - 1/4" spacing (and no smaller or larger). Some sanded grout may contain large/sharp aggregate that can scratch tile. If you're grouting glossy tiles, we recommend testing the grout prior to grouting your installation. Every bag can be unique so if your installation requires multiple bags, test each bag. Be sure to follow the manufacturer's instructions for mixing and applying grout. Stan Bitters Tile should be installed without grout. More installation details can be found on page 13, or ask a Tile Specialist for additional advice.

Grout Spacing

Heath tile sizes are nominal—length and width varies from tile to tile. Thoughtful grout spacing can compensate for tile variation. Tighter grout spacing will require more tiles than the listed square footage and can also result in installation failure due to expansion and contraction. In some cases, a wider grout line may be necessary to achieve the best overall look depending on tile characteristics and installation. Don't rely on one size spacer; shimming will help maintain level lines throughout the installation. See how grout spacing relates to size and length variation on page 5. Please refer to the guide below for our minimum recommended grout widths, and ask a Tile Specialist for additional advice.

Recommended Grout Spacing Guide	
tile size	min. suggested grout width
1x3, 2x2, 3x3, 3.5" hex, little diamond, half hex, wide hex	1/8"
2x4, 2x6, 2x8, 2x9, 3x6, 3x9, 4x4, 4" triangle, 4x8, 6x6, 5" hex	3/16"
2x12, 3x12, 6x12	1/4"
crease in, crease out, dimensional triangle, dimensional diamond, oval	3/16"-1/4"

Terms of Sale

Please review quotes carefully, as they become sales contracts upon signing.

A signed contract and deposit are required for an order to be processed. Orders under \$10,000 require payment in full for the order to be processed; orders over \$10,000 require a 50% deposit. Payment is due in full prior to release of the order, including shipping & handling charges. We accept credit cards, payment by wire transfer, and first party checks (mail checks to Heath Sausalito, allow 7-10 days for check processing prior to order release).

Prices are F.O.B. factory, applicable sales taxes extra.

A storage fee of \$75 a pallet/day may be applied to orders held longer than 15 days.

Cancellation of a signed quote will incur a 15% cancellation fee. Once in production, orders cannot be cancelled. All made-to-order tile is final sale.

Shipping and Handling

For orders under 25 sq.ft., small package service will be quoted.

Orders over 25 sq.ft. will be shipped on pallet via Heath's preferred carrier. There is a \$25.00 charge per pallet used.

Freight fees are passed on at cost, with a \$10.00 pallet charge per pallet used.

General

Due to the handcrafted nature of our tile, actual size and color variation should be expected.

Price quotes are valid for 30 days. Lead times are re-quoted upon conversion of quote to sales order.

Prices are subject to change without notice.

We recommend ordering up to 20% extra material depending on specifics of your tile specification and installation design. Please consult with a Tile Specialist for more information.

Job completions have a minimum order of 4 sq.ft. They are priced at full retail price plus a \$100 order completion fee per line item.
