

FIXED LOOP EXTENSION

The introduction of the Compact Clew to the Wave and Crossover sails in 2009 has resulted in the collection having shorter luff lengths overall and consequently more sails rig on the 370cm mast than ever before.

Every NeilPryde sail specified to use 370 mast (*except the Solo which has a Vario-top*) has an additional extension loop in the sail bag to enable you to use a 400 mast, if necessary. This loop is located in the clear compartment inside the top of the sail bag.

NEILPRYDE

1) Simply remove the mast end-fitting from the sail by sliding it off the top webbing.

1

2

3

2) Loop the extension loop through the sail top webbing.

4

5

6

- 3) Rig the sail by pushing the 400 mast in front of the sail top webbing and using the top fitting attached to extension loop.
