Handwriting Without Tears
Wide range available

2018

Proudly providing quality sensory products and services

14 Years

Registered NDIS Provider
Sensory Tools® offers leading-edge treatment courses and products that specifically address issues associated with Sensory Processing, Autism, Asperger’s, ADD/ADHD, Learning Difficulties, Behavioural and other Developmental Challenges.

Sensory Tools make this commitment to children, families and professionals:

* Seeing the gifts in the children we care for
* High-quality courses and workshops (both national and international)
* Online seminars
* Cutting edge information and resources
* Products that lead the field in supporting children ‘from the inside out’

How To Order

The easiest way to place an order is through our secure website www.sensorytools.net which will accept Visa/MasterCard and PayPal payments.

Government and non-government schools and organisations who require payment by invoice can fax the order through using their official order form, where applicable.
For queries regarding quantities and shipping cost etc, please call our office.
The items ordered will be sent with an invoice payment (14 days)

Payments may be made by:
* Credit card (Visa or Mastercard)
* PayPal
* Cheque made out to Sensory Tools®
* Direct deposit, as per details on the invoice.

Should you require a quote or have questions regarding a product, please contact us by email or phone.

E-Mail: salesau@sensorytools.net
Phone: (02) 4578 6123
Fax: (02) 4578 6115

Product Use
Please note that items sold by Sensory Tools® are for therapeutic use and should be used under adult supervision.
Lori Lite is a parenting stress expert and author. Lori has created an award winning line of books, CDs, and lesson plans designed to help children, teens, and parents decrease stress, lower anxiety, and control anger. Her sought-after practical tips provide parents with real-time solutions. Her personal parenting challenges with getting her children to sleep were the catalyst for her stories. She has the unique ability of communicating how to integrate stress management techniques and self-esteem building activities into your family’s life.

The techniques that are woven into the stories are diaphragmatic breathing, visualizing, progressive muscle relaxation, and affirmations or positive statements. Lori was the first to weave adult level, research-based techniques into a storytelling format. This method allows children to follow a story along in a relaxed organic way while experiencing actual stress and anger management techniques. Lori’s stories also expose children to the power of self-esteem building affirmations and positive statements.

The book, How Does Your Engine Run® A Leader’s Guide to the Alert Program® for Self-Regulation (Williams & Shellenberger, 1996), describes an innovative program that supports children, teachers, parents, and therapists to choose appropriate strategies to change or maintain states of alertness. Students learn what they can do before a spelling test or homework time to attain an optimal state of alertness for their tasks. Teachers learn what they can do after lunch, when their adult nervous systems are in a low alert state and their students are in a high alert state. Parents learn what they can do to help their child's nervous system change from a high alert state to a more appropriate low state at bedtime.

Also available in a 5 pack (excluding game)
Resources

Information and helpful advice related to the understanding and needs of special people.
Selected guides for therapists, teachers, parents and everyone tasked with and concerned for the wellbeing, treatment and care of our people with special needs.
There are literally thousands of books on the subject of Special Needs and we at Sensory Tools have selected the ones we feel are resourceful and have the most value.

Genevieve Jereb OT is an Australian-born paediatric occupational therapist who has lectured on sensory processing disorders, both nationally and internationally. Most recognized as a children’s singer and songwriter, Genevieve uses the principles of sensory processing theory to create music, songs and rhythmic activities for children with attention, motor and regulation difficulties.

For more information, prices & ordering
www.sensorytools.net

Favorite Kids’ Rhythms for Calming, Cool Downs and Bedtime Routines
Cool Bananas was created to provide children with a selection of strong, regulated rhythms to support a state of calm, organization and regulation in their nervous systems. Enchanting favourite children’s songs sung at 50 to 70 beats per minute support the dis-regulated child as background music during therapy, classroom and home activities (e.g., table top time, play time, bath time, car rides).

The songs and rhythms are designed to be playful and engaging, reaching for the “gleam” in the child’s eye. Australian sing-a-longs and story telling add a unique flair to the overall flavour of the music. The CD is completely interactive from beginning to end, using call and response sing-a-longs, “Kid Power” chants, full body movement and dancing. Songs to calm and organize are also provided to support regulation for the nervous system biased toward defensiveness.

It’s a great gift for the child with Sensory Integration Dysfunction, Autism, Pervasive Developmental Disorder, Asperger’s Syndrome, Attention Deficit Disorder/Attention Deficit with Hyperactivity, and other regulatory disorders.

Jumpin’ Jellybeans is inspired by and dedicated to Gen’s “Cabin 12 Kids” at Camp Avanti in Wisconsin. This collection keeps kids involved in directed activities to enhance attention and alertness, provide rhythmic entrainment, improve body awareness, and strengthen overall patterns of respiration. And kids will have loads of fun along the way! The 24-page full color booklet includes lyrics to all the songs, with many activities detailed in the text alongside.

The songs are also meant to provide therapists, teachers and parents with ideas for how to structure a child’s day and implement easy but powerful opportunities for sustaining focused attention, organised movement and effective interaction.

The CD is organised into different “therapeutic” categories, including songs for Arousal, Routines, Transitions, Postural Organisation and Oral/Respiratory Needs. The CD booklet contains the words to the songs and describes the intended actions to the words. The CD booklet also gives general principles of sensory modulation and entrainment and explains the therapeutic rationale behind what seem to be free-spirited children’s songs.

Therapeutic Listening System
Sensory Tools® is proud to be an Australian distributor of Therapeutic Listening® headphones. Listening plays a vital role in the sensory integration process. In fact, some believe that the auditory system is the ‘missing link’ in sensory integration modalities. Both research and clinical experience have shown that using sound-based interventions for clients with sensory processing difficulties can increase treatment effectiveness. Listening is a function of the entire brain; when we listen, we listen with the whole body.

Respiratory

Tools designed to go in the mouth, whistles, noisemakers, bubbles and other blowing tools to encourage lip closure, breath control and tone. Whistles are a good example of therapeutic tools with multidimensional therapeutic value. They involve multiple sensory motor experiences, whistles offer many opportunities for integrating oral, ocular motor, eye-hand, auditory and respiratory function that in turn supports posture, modulation and general sensory motor and psychosocial development.

**Tools for Beginning Blowing**

- Lip Siren Whistle
- Magic Flute Straw
- Mini Harmonica
- Trumpet Whistle
- Three Tone Whistle
- Siren Whistle
- Riverboat Whistle
- Saxophone Whistle
- Rubber Razzer

**Tools for Power Breath** invites more push behind the breath that often causes an involuntary release of a fixed diaphragm

- Blow Dart
- Train Whistle
- Duck Whistles
- Space Whistle

**Tools for Resistive Blow** Strengthens weak diaphragm

- Balloon Animals
- Balloon Ball Cover
- Mini Puffermalls
- Balloon Boat Whistle
- Balloon Helicopter Whistle
- One Way Valve

Fidget Tools

Fidget tools explore a variety of sensory and educational experiences for children to enjoy under adult supervision. The aim of these tools is to delight, excite, explore, engage and learn about how to calm up or calm down and try new sensory experiences whilst engaging with subject matter of interest. We hope parents and educators will use these with imagination and encourage engagement with the child both emotionally and environmentally.

For more information, prices & ordering
www.sensorytools.net
Sensory Tools® ‘Star Fidget’ Exclusives

Designed and manufactured in Australia—exclusive to Sensory Tools Australia. Designed specifically with therapists and their clients, with sensory issues, made from grades of resistant latex free tubing ideal for stretching and developing fine motor skills.

What are Wikki Stix? They look like pipe cleaners but they’re not! They are waxy and stick to themselves to create 3D objects. They adhere to almost all smooth surfaces with just fingertip pressure and they are a unique hands-on teaching tools.

Fine Motor

Our Theraputty is ideal for developing hand-muscle strength and increasing endurance. To gently increase range of motion or reduce stiffness. As strength increases, gradually increase the resistance of putty. Varying resistances are indicated by colour.

The Handwriting Without Tears® curriculum draws from years of innovation and research to provide developmentally appropriate, multisensory tools and strategies for your classroom. The program follows research that demonstrates children learn more effectively by actively doing, with materials that address all styles of learning.

It teaches effectively with joy. Handwriting Without Tears have figured out easier, happier ways for children to master handwriting. Handwriting Without Tears is dedicated to developing excellent materials for children and training for teachers. As a result, millions of students have successfully used the program. The result truly is handwriting without tears!

FORBRAIN

FORBRAIN headphones leverage high frequency vibration to help the user create and process sound.

The Patented electronic dynamic filter blocks out environment noise-isolating and amplifying the users voice, giving the nervous system a solid sensory workout.

It also enhances long vowels and other sounds critical to the construction of language. The resulting sound is delivered through the bones and bone conduction, not the ears or air conduction, to the nervous system and the brain.

Toobaloo and Headset
This colourful 64-card deck features fun-filled activities that help children develop their sensory motor skills while refocusing, calming down and regaining energy.

For use at home, at school or in the clinic, these cards are a handy tool for parents, teachers and therapists!

With the Sensory Processing Measure (SPM), you can obtain a complete picture of children's sensory functioning at home, at school, and in the community. Recognizing that sensory processing problems often manifest differently in different environments, this set of three integrated rating scales assesses sensory processing, praxis, and social participation in primary school children. The assessment's unique multi-environment approach allows you to see, for example, why a child who functions well in a highly structured classroom may have problems in a more relaxed setting. For more info please visit www.sensorytools.net

Available Kits
- Sensory Processing Measure - Home Autoscore Forms (W-466A) (25)

- Sensory Processing Measure Comprehensive Kit - Main Classroom (SPM W-466)
- Sensory Processing Measure Comprehensive Kit - Preschool (SPM-P W-466)
- Sensory Processing Measure - Preschool - Quick Tips (W497)
- Sensory Processing Measure - Quick Tips (W466)

The Therapressure brush is the sensory brush designed by Patricia Wilbarger. This oval shaped brush is easier to use than regular sensory brushes in that it comes with an attached handle and has a more ergonomic design that makes it fit comfortable in your hand. According to Patricia Wilbarger, “the high density of the bristles makes it an ideal brush for the body.” For specific instructions on brushing therapy its best to speak with an occupational therapist or therapist trained in the Wilbarger Protocol. The Therapressure brush is the preferred brush for the Wilbarger protocol and is available in white only.

The Wilbarger Protocol is a therapy program designed to reduce sensory or tactile defensiveness. Children who exhibit symptoms of tactile defensiveness are extremely sensitive to touch. They often fear or resist being touched, have difficulty transitioning between activities, and may be lethargic. This therapy was developed by Patricia Wilbarger, MEd, OTR, FAOTA.
For anyone who wants to measure and manage time more effectively, Time Timer® is an innovative visual timer designed to “show” the passage of time through the use of a patented red disk that disappears as time elapses. Unlike traditional timers that fail to make the abstract concept of time concrete, the award-winning Time Timer’s visual depiction of “time remaining” provides stress-free time management at work, school and home to make every moment count.

www.sensorytools.net
Weighted creatures are a great addition to any sensory therapeutic routine. Holding the weighted creature provides deep calming pressure to the body and relaxes the central nervous system and stimulates the brain.

**Weighted Sensory Creatures**
- Turtle - 1.2kg
- Snake - 1.7kg
- Platypus - 2.1kg

**Sensory Diet**
Percy available in Furry or Plush

For the under sensitive, the vibration can provide necessary input to help calm and regulate the system. For the oversensitive, it can help increase the tolerance to tactile input. Its uses within the scope of a sensory processing disorder are invaluable.

**Pressure Vests**
Deep pressure input can be very therapeutic to children with autism, sensory processing disorder, ADHD and other neurological disorders. Increased pressure provides the child with unconscious information from their muscles and joints which may help the child to better integrate sensory information, achieve a calm state, become more organized and improve their ability to concentrate.

Available in various sizes

For more information, prices & ordering
www.sensorytools.net
**Superior Quality and Design**

Compression clothing designed to calm children & regulate behaviour

Suitable for children with ASD, ADHD, ADD, Sensory Processing Disorders, Anxiety & Behavioural Disorders

Calm Fit Clothing help children regulate their body and filter sensory information, which enables them to stay calm, help with body awareness, listen and learn. Designed to wear all day, every day to keep the sensory system calm. Reassuring gentle pressure gives proprioceptive feedback (information received from muscles and tendons, concerning body movement and position.)

Allows your children to wear their favourite clothing, or school uniform, while enjoying the calming benefits and minimising meltdowns.

It is a very **High Quality** milk polyester fabric.

It has excellent compression and recovery because of the very high spandex count.

It is very important that the fabric is breathable and you can **Wear it to bed**

The stitching is done with an overlocker and the **Seams on the OUTSIDE** offer less irritation to the skin.

The fabric has a very soft silky feel but at the same time it is a very strong fabric.

What’s it made of?

73% soft milk polyester
27% spandex
4 way stretch
Warp knit fabric
250 GSM

Measure around chest under armpits when exhaled for best size.
During the seasons of the year you can easily adapt the weighted blanket to suit the needs of the user.

**SUMMER**
Use blanket without a cover

**AUTUMN / SPRING**
Place inside a doona/quilt cover

**WINTER**
Place inside a doona/quilt cover with doona/quilt

Suggestions only

All weights sized at 140cm x 210cm to fit inside a single bed quilt cover

All Seasons Weighted Blankets do not come with covers.

All weights sized at 140cm x 210cm to fit inside a single bed quilt cover

Weighted blankets are like warm hugs; they provide opportunity for deep pressure calming input. The weight of the blanket serves as a deep touch therapy, stimulating deep touch receptors all over your body that promote a more grounded and safe feeling to the individual.

Weighted blankets have traditionally been used by occupational therapists as a means to help children with sensory disorders, anxiety, stress, or issues related to autism, and research continues to support this practice.

When used correctly a weighted blanket can be a powerful addition to anyone's sensory tool box.

All weights sized at 140cm x 210cm to fit inside a single bed quilt cover

All Seasons Weighted Blankets do not come with covers.

Weighted Lap Blanket

Lap blankets have been shown to be beneficial in many areas and may help if the following is happening:

- Restless moving, tapping of feet, kicking during sitting times
- Enjoys pressure on legs with objects such as blankets, toys or books
- Difficulties calming in situations such as in the classroom or at dinner time

Lap blankets provide opportunity for deep pressure calming input. The weight on your lap serves as a deep touch therapy, stimulating deep touch receptors that promote a more grounded and safe feeling for the individual.

This weighted product has traditionally been used by occupational therapists as a means to help with sensory disorders, anxiety, stress, or issues related to autism, and research continues to support this practice.

Lap blankets are versatile, not only for the lap, it can be rolled up and used as a shoulder comforter, placed over the chest when lying down or using it like a shawl to use weight across the back of the body.

For more information, prices & ordering
www.sensorytools.net
The Engine Room is like a specialised gym. It uses certain activities and equipment to give the body vestibular (movement) and proprioceptive (pressure) input. Said to be an organised way of providing intensity.

The room must be tailored to one’s specific sensory needs just the same as, for example, you purchase a mattress and/or pillow. Some people will prefer a firm mattress and firm pillow, some prefer a soft mattress and soft pillow, and some prefer a combination, soft mattress with a hard pillow or vice versa.

The reason for this is because it will become therapeutic depending on how, when, and why the equipment or activities are used. The professional guidance needs to come in regards to how, when, and why... it can then benefit anyone on opposite ends of the sensory processing continuum.

Based on the Alert Program® which is detailed in the book called “How Does Your Engine Run?”

**Principals**

Close to the ground  
Uneven Surfaces  
Movable Surfaces  
Up slide Inclines  
Pushing and Pulling  
Swings to push and pull incorporates heavy work.  
Body Socks, whilst crawling etc form a heavy work out without the user realising

Always use rhythm to match the intensity of your movement session and always allow time to cool down at the end with breathing activities

Therapy also improves a child’s modulation, or ability to regulate neural messages in such a way they can respond to stimuli appropriately. The benefits of therapy are often physical, but also psychological.

**The physical benefits of therapy include:**

- Balance responsivity – over responsivity and under responsivity  
- Gravitational security  
- Hand-eye coordination  
- Improved motor-planning  
- Improved sleep cycles  
- Language development  
- Posture

**The psychological benefits of therapy include improvements in:**

- Attention  
- Confidence  
- Emotional outbursts and frustration  
- Moodiness  
- Procrastination  
- Restlessness  
- Socialisation

Items to consider...

- Crash Mats  
- Body Socks  
- Swings  
- Genevieve CD’s  
- Kazoos  
- Incline Mats  
- Landing Mats  
- Ball Pits

Thank you Towradgi Public School for images

www.sensorytools.net
Lycra Tunnels

This lycra resistance tunnel can provide proprioceptive feedback and help the child develop and/or practice their bilateral co-ordination, motor planning, body awareness, tactile discrimination, gross motor skills and core body strength. Medium resistance can be achieved by a child crawling through by themselves, while a heavy resistance load can be experienced when a child pushes a 55cm ball through the tunnel. Deep Pressure Touch Stimulation (DPTS) can stimulate the release of serotonin in the brain, in turn helping children and adults to be calm, relaxed, concentrate on a task and moderate their sensory input. The pressure provided by the lycra around the child’s body, can give this deep pressure stimulation.

Move & Sit

The Move & Sit is an air-filled seat that is similar to sitting on a Gym Ball (or balloon). Used when sitting in a chair, the unevenness of the cushion adds an element of instability, keeping your body in motion and enhancing stomach and back muscles. It is designed to promote active sitting. The active sitting motion uses more stress on your stomach muscles rather than your lower back. Overtime, the stomach will be much stronger and be able to absorb the pressure on the back that sitting for long periods of time can cause.

Vestibular Movement & Swinging

The vestibular system is stimulated when the head changes position such as when a child turns in circles, hangs upside down, runs or swings. Rotary movement is one of the most powerful forms of vestibular stimulation because it causes rapid changes in head position. It is so powerful it can cause nausea or dizziness. However, when used under the supervision of an occupational therapist, spinning on a piece of suspended apparatus such as a swing is a treatment activity that can promote sensory integration.

The motion of swinging restores balance to the vestibular system, provides proprioceptive input (deep pressure) and generally helps autistic-spectrum children feel more “in balance”. The soothing motion of swinging soothes, relaxes and increases concentration. Children who have trouble focusing on tasks such as reading or math, might find it easier to concentrate sitting in a hammock chair, their bodies engaged in a soothing motion.
Gross motor skills are important to enable children to perform every day functions, such as walking, running, skipping, as well as playground skills (e.g. climbing) and sporting skills (e.g. catching, throwing and hitting a ball with a bat). These are crucial for everyday self-care skills like dressing (where you need to be able to stand on one leg to put your leg into a pant leg without falling over).

Gross motor abilities also have an influence on other everyday functions. For example, a child's ability to maintain table top posture (upper body support) will affect their ability to participate in fine motor skills (e.g. writing, drawing and cutting) and sitting upright to attend to class instruction, which then impacts on their academic learning. Gross motor skills impact on your endurance to cope with a full day of school (sitting upright at a desk, moving between classrooms, carrying your heavy school bag).

Various Balance Board exercises and routines are used to develop rhythm, sequencing, motor coordination, visual and auditory processing. The Balance Board also helps to release the effects of emotional stress and trauma. Significant shifts in behaviour have also been noted, along with enhanced self-esteem.

www.sensorytools.net
Body Socks are designed for spatial awareness and interaction. Each pillow-case-like sack is made from a translucent Lycra material with a reinforced entrance. Body Socks can help children with sensory processing disorders to work on "position in space" skills. They must kinesthetically feel what their bodies are doing and how they are coordinating their body movements. Watching themselves in a mirror, or creating shadows, will help them develop this proprioceptive sense, which is often dysfunctional in children with sensory integration dysfunction / sensory processing disorders.

S - 68cm W x 100cm H
M - 68cm W x 120cm H
L - 71cm W x 142cm H
XL - 74cm W x 165cm H

Playaway Toy Company, Inc. has brought the fun indoors with the Rainy Day™ Indoor Playground. Used successfully by parents and therapists, the Rainy Day™ Indoor Playground offers a unique suspension system. At the centre of the system is the Support Bar, easily suspended in any doorway. Choose one of our attachments, hang it up and you have instant recreation!

Why? To enhance early childhood development such as balance, early speech, and coordination. Striving to make learning fun! You’ll be amazed as you discover for yourself the wonderful difference the swing makes in your life. Unique in construction, this product is fun and brightly coloured changing frowns into smiles; durable craftsmanship to be enjoyed for many years. The Rainy Day Indoor Playground line balances and coordinates a child as he or she swings and uses the attachments.

www.sensorytools.net
Designed for youngsters and crawlers, the Soft Play range is a soft yet sturdy assortment of foam shapes and activities which promote imaginative climbing and play within a controlled and safe environment. This is as great for youngsters who are just ‘finding their feet’ as it is for the quieter children who just simply want to sit and interact with others, or mum & dad. The Soft Play range is suitable for use in supervised, controlled environments such as play centres, pre schools, engine rooms or tots play areas in monitored settings.

The Traffic Jam
In My Brain

Course Description
This presentation is designed for therapists, teachers, parents, caregivers and other professionals who are interested in understanding the fundamentals of sensory processing and its impact on attention, behaviour, social engagement, creative thinking, purpose driven play and learning.

Genevieve Jereb OT offers practical and powerful tools to help support children to “learn and thrive from the inside out.” Participants will be able to add beneficial experiences to the sensory diets of the children for whom they care.

Respiration and its effects on behaviour, learning and attention will be presented along with practical tools to support the breath at home, in the classroom or in the social environment. Participants will be exposed to a multitude of activities involving rhythm and movement to implement immediately when leaving the workshop.

A relationship based approach to interacting with your children to support problem solving, motor planning, creative thinking, building bridges between ideas and social connectedness will also be presented.

Ms. Jereb will address how sensory processing difficulties affect many children, both with and without the diagnosis of Autism Spectrum Disorders, Asperger’s Syndrome, ADHD, ADD, learning challenges and other developmental and neurological challenges.

Sensory processing differences in children, both recognized and undetected, can significantly impact social and emotional relationships, behaviour, attention and learning in the classroom, home and clinic.

Who Should Attend
* Parents
* Educators
* Care Givers
* Pre-School Teachers
* Child Care Workers
* Occupational Therapists
* Speech Pathologists
* Physical Therapists
* Physicians
* Paediatricians
* Other Professionals who work with children

Objectives
* To describe sensory integration, sensory modulation and sensory discrimination and the role they play in the learning process.
* To identify the essential ingredients of an effective “sensory diet.”
* To gain awareness of associated problems relating to sensory processing challenges (i.e., difficulties impacting attention, behaviour, learning and social engagement).
* To participate in, and learn to generate, activities and inputs designed to support children who are “traffic-jammed.”
* To gather ideas to take back to the classroom, home or clinic to use with all children whether they present with sensory processing challenges or are developing typically.
* To increase strategies for effective engagement and connection to support overall emotional regulation, social relationships, focuses, attention, problem solving and motor planning abilities.

About Genevieve Jereb:
Genevieve Jereb, OT is an Australian-born paediatric occupational therapist who presents on sensory processing disorders worldwide and online. She has worked with leading USA clinicians and lecturers, collaborating with the well-known international lecturers, Carol Stock Kranowitz, Patricia and Julia Wilbarger, Sheila Frick and Colleen Hacker.

During her ten years in the USA Genevieve was co-owner of the cutting edge treatment facility, Therapeutic Associates. With over 25,000 CDs sold, her released recordings, including No Worries, Say G’day!, Cool Bananas, and Jumpin’ Jellybeans provide parents, professionals, caregivers and educators with fun and engaging, ready-to-use rhythmic songs and activities to support self-regulation for children whose brains are “traffic-jammed.”
