

1. Slide rail system(s) over the existing round tube rail on the John Deere Gator plastic bed. Ensure that the ends of the rail system with the plastic cap is at the rear of the rail system.

2. Using the round tube attachment, included in the box, secure the attachment to the opposing bed rail bracket that is welded to the rail system. Assemble these brackets together using the (2) allen bolts and the allen key that is included in the packaging.
