

Thank you very much for purchasing from M&R. We strive to provide a great product that is made by truck enthusiasts for truck enthusiasts.

2019+ Ford Ranger Dual 30s Light Bar Kit

INCLUDED

- (2) 30in Light Bars
- Mounting Brackets
- Mounting hardware

Step 1

In order to install this kit, the front grille of the truck needs to come off. It seems intimidating but it's not if you follow this tutorial. Take a look at grille removal videos on YouTube. There is a bunch. We think this one is pretty good.

Step 2

For the lower lightbar use the factory push pins that are installed on the truck. Use the trim removal tool to take them out without breaking. Slide M&R bracket under after push pin removal and reinstall.

Step 3

For the upper lightbar use the factory bolts that hold the plastic radiator trim pieces that are installed on the truck. Use M&R "L" brackets in order to tighten them back and have the desired width to fit the lightbar bolts.

Step 4

Each Lightbar has 2 wires coming from the rear.

Red wire → positive

Black wire → negative.

The lightbar has 6.5ft of wiring. You will need to buy a generic wiring harness on Amazon/Ebay.

Step 5

Now its time to reinstall the grille in reverse order.

ENJOY YOUR ADVENTURE!
