21105	VIVID-1HD	VIVID deck light, head only, 5000K

Thank you for purchasing your new LED VIVID, Please take the time to read and understand the instruction sheet below. Failure to do so may void warranty.

The VIVID deck light/kit is designed for recessed applications such as decks, path lighting and or step lighting. It has an IP67 rating and has been specifically designed for external application although this product may also be used internally. When installing outside please pay special attention to installation in the ground such as path or outside patio areas. Although designed to be exposed to the outside elements the VIVID deck light/kit is NOT designed to have permanent water sitting behind the fixture. Water pooling behind the fitting without drainage will cause permanent damage to the fixture over time. This will NOT be covered under our normal replacement warranty conditions.

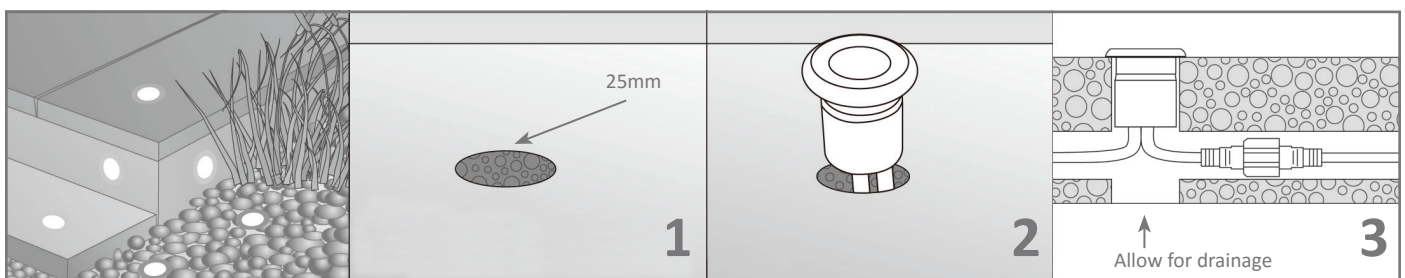

The VIVID deck light/kit has a simple PLUG & PLAY system which allows easy connection between the fittings. The VIVID deck light/kit comes complete with 5pcs x heads and a LED driver which is also designed for exterior use. The LED driver used within the kit allows for an additional 5pcs to be connected. These can be ordered separately.

The VIVID deck light/kit utilises a high lumen LED. If this is too bright for your application an optional RF hand held dimmer can be used to reduce the light output to suit your application (DIMMING CONTROLLER)(21100).

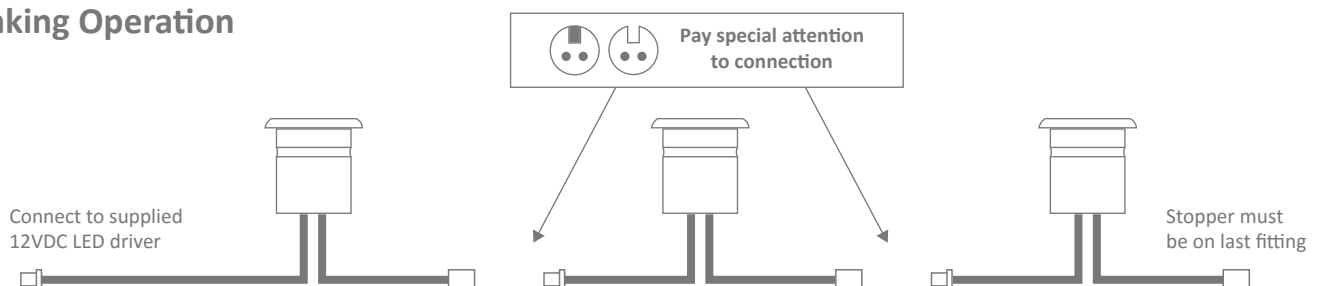

Warning: Any use other than its intended use will void warranty. Any changes to the factory supplied kit (including cutting of the existing wiring loom) will void any warranty.

For any further information please refer to your place of purchase or contact Domus lighting directly.

### Installation Instructions

### Linking Operation
