

Vent-Axia PureAir Room 260X

- Advanced 6 stage filtration system
- Air quality display
- Portable
- Suitable for any habitable room
- Filter replacement reminder
- Timer setting
- 3 speeds
- Sleep mode
- Auto mode
- 2 year warranty

Vent-Axia PureAir Room 260X

We spend more than 90% of our time indoors breathing air that is up to 5 times more polluted than outdoor air. Indoor air can contain over 900 chemicals, particulates, biological materials, viruses and bacteria. Each of us breaths 9000 litres of air each day and poor indoor air quality affects the health of everyone in your home.

The Vent-Axia PureAir Room is an advanced multistage air cleaning system which removes these harmful particles and neutralises bad smells, purifying the air you and your family breathe for a fresher and healthier indoor environment.

1. 2. 3. 4. 5. 6.

The Vent-Axia PureAir Room is not only suitable for your home, but for all types of indoor environments such as hotels, offices, schools, public environments and where high quality air purification is required.

1. Washable Pre-Filter

The pre-filter is a washable coarse particle filter which collects the larger particles from the air flowing through it. This process additionally protects the HEPA filter from these particles and thus increases the service life of the following filters.

2. HEPA Filter

The 'High-Efficiency Particulate Air' filter removes 99.9% of particles in the air including diesel, pet allergens, pollen, viruses, mould and bacteria by trapping them inside the filter material.

3. Activated Carbon Filter

The activated carbon filter has a huge surface area which removes volatile organic compounds (VOCs), odours and other gaseous pollutants from the air by trapping the gas molecules in the charcoal.

4. Cold Catalyst Filter

The cold catalyst filter speeds up the decomposition of organic compounds in the air, breaking them into molecules such as H_2O and CO_2 , which are harmless to the human body.

5. Ultraviolet Light

Ultraviolet light technology is used as a disinfection method using short-wavelength ultraviolet light to inactivate bacteria and viruses sanitising the air around you.

6. Ionizer

The ionizer is the last stage of the filtration process, generating negatively charged ions which adhere to small particulate materials statically charging them. This attracts other particles creating larger clusters, that can then be absorbed by the filter at the start of the cycle.

Purify your indoor air for a healthier home environment

Indoor air can contain
900
chemical particles and bio materials

Poor air causes
81%
of respiratory conditions

65%
of Australian homes are at risk of poor indoor air quality

PureAir Room cleanses the air and removes unpleasant and unhealthy airborne matter commonly found in the home. With its advanced 6 stage filtration system the PureAir Room filters out the following:

Mould

Mycotoxins released by mould spores can cause headaches, eczema & lung conditions such as asthma.

Dust

Household dust can be an irritant to our skin and lungs. It is also perfect food for dust mites which produce allergens.

Viruses

Bacteria and viruses spread easily around the home in the air causing cold and flu like symptoms.

Odour

Odour can be unpleasant; but odour also caused by pollutants like aerosols and air fresheners are detrimental to health.
