

LOOK ONCE

This flower brightens up meadows in summer.
Some people think it has a black eye.

LOOK AGAIN

The black-eyed Susan's dark center is brown, not black. It looks like a bull's-eye so insects can find it. They eat the flower's sweet-smelling nectar.

This flower is also called "brown-eyed Susan," "brown Betty," and "yellow daisy."

LOOK ONCE

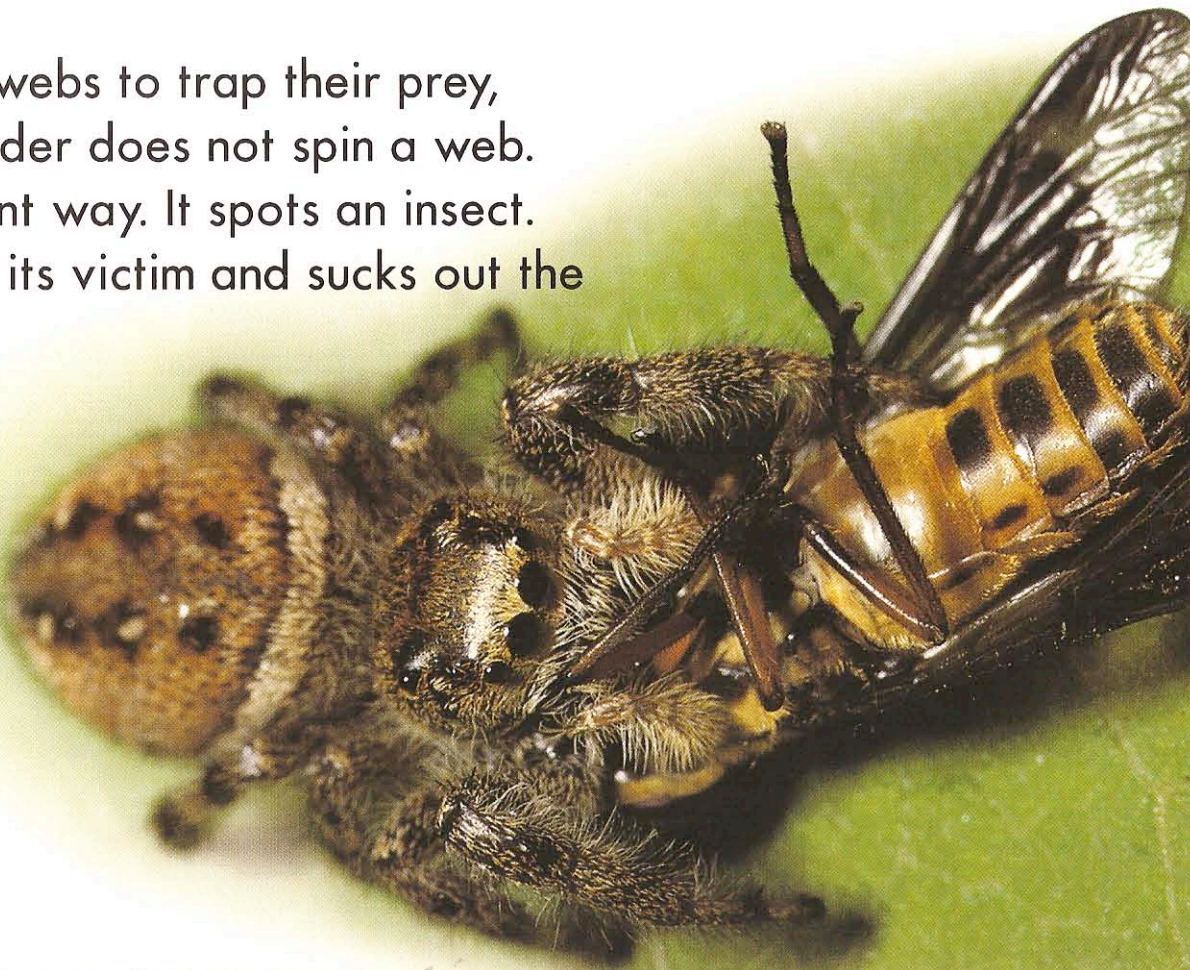

You have two eyes and two legs. This creature has *eight* eyes and *eight* legs!

LOOK AGAIN

Some spiders spin webs to trap their prey, but this jumping spider does not spin a web. It hunts in a different way. It spots an insect. Then it pounces on its victim and sucks out the insides of its prey.

Spiders do not chew their food. A spider's mouth works like a straw, sucking up food like a milkshake.

LOOK ONCE

Oh dear, oh dear! Who has spots all over its coat?

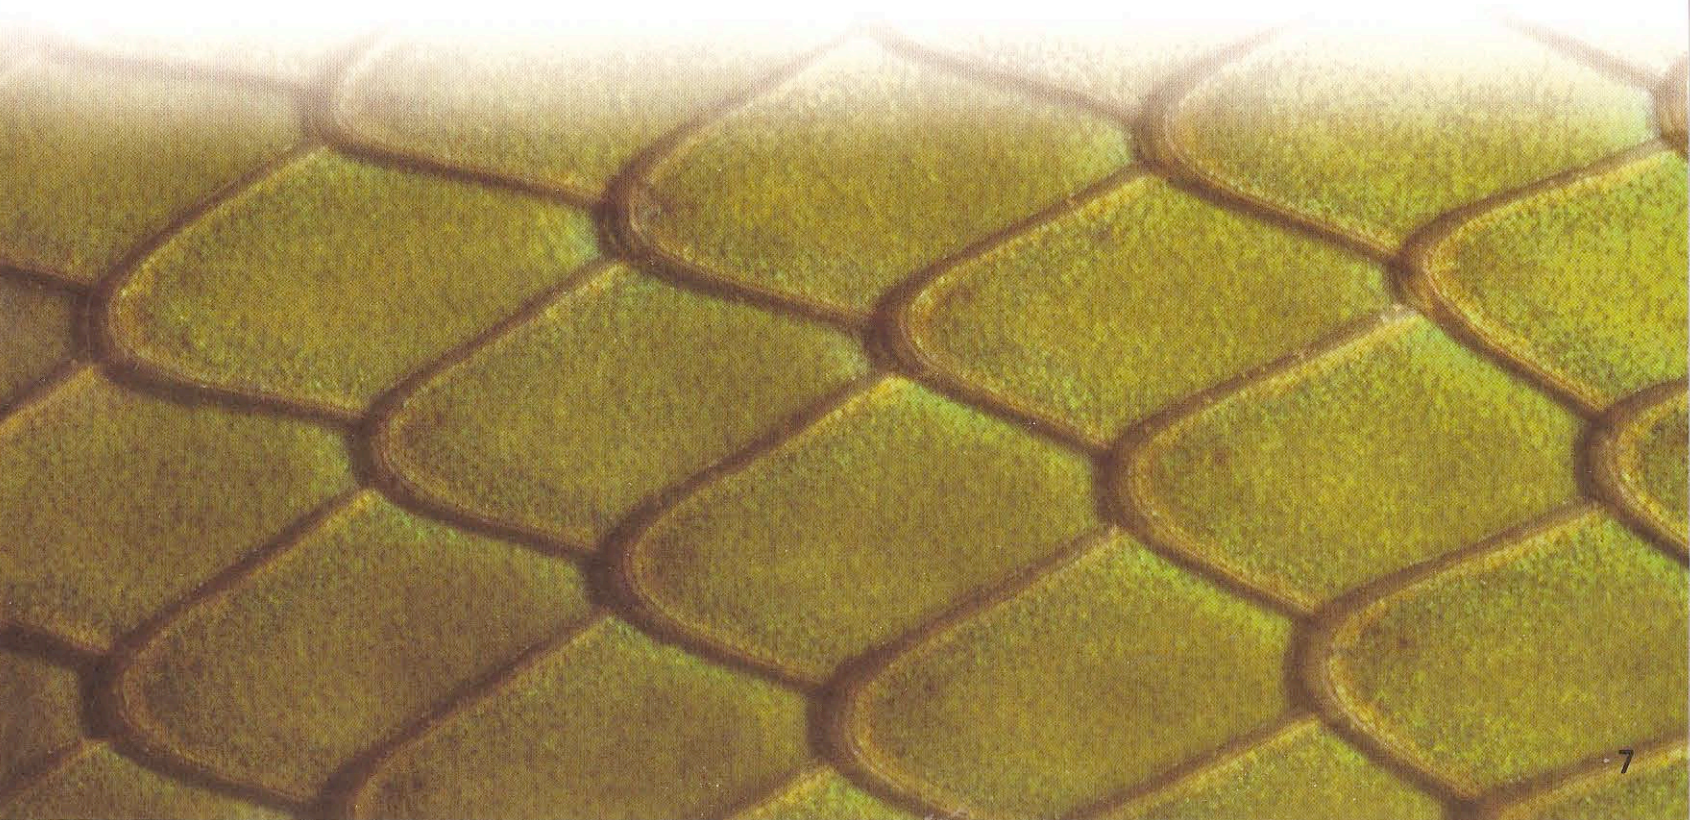

LOOK AGAIN

It's a baby deer. A baby deer is called a "fawn." Spots help to camouflage the fawn so it can hide in a meadow full of flowers. As the fawn grows, its spots disappear.

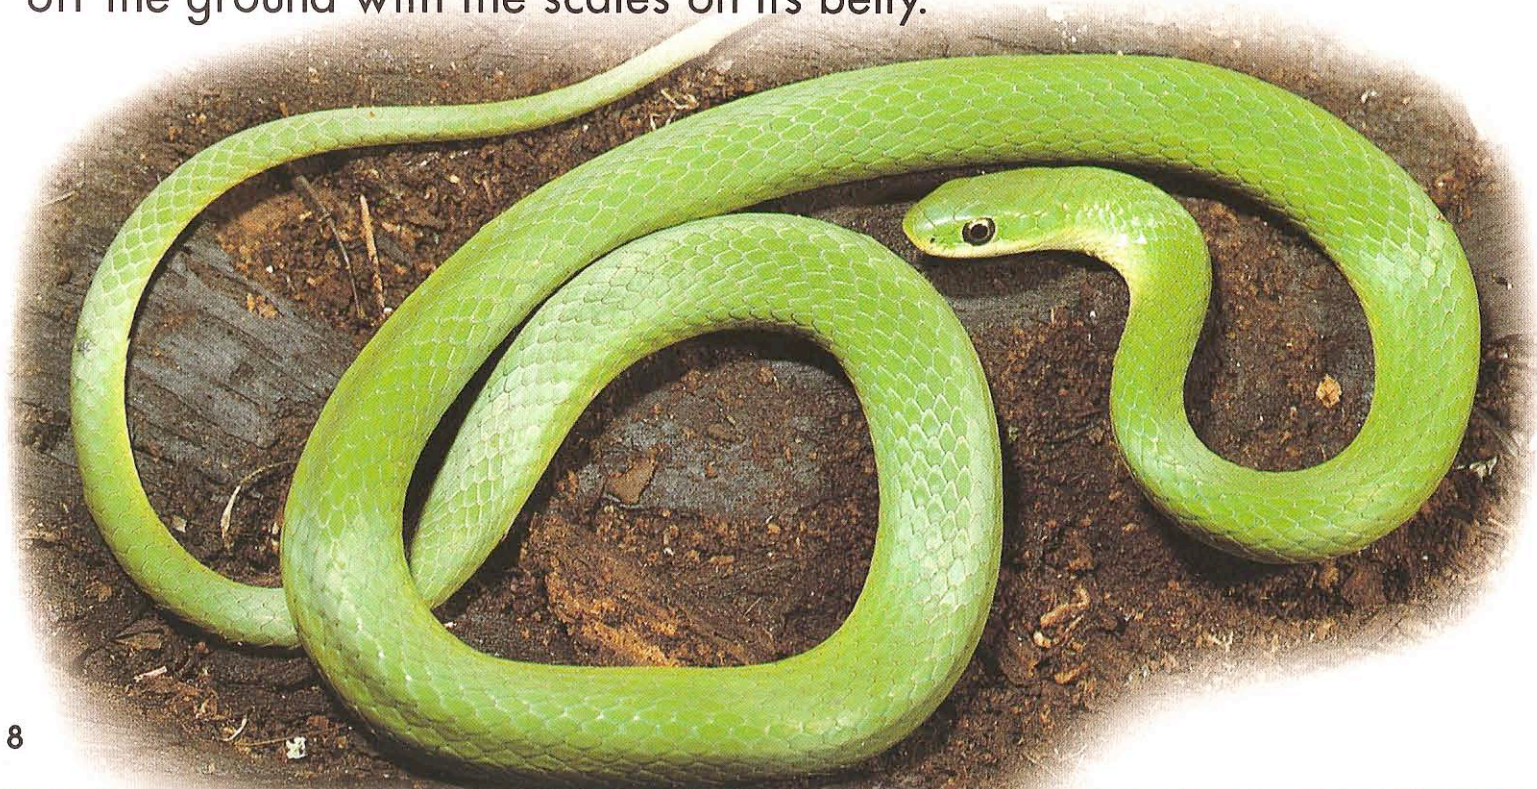

LOOK ONCE

These hard, shiny scales help this animal slither away.

LOOK AGAIN

This snake is called a smooth green snake. A snake does not have legs, but it has many scales. Its skin is made of scales. The snake pushes off the ground with the scales on its belly.

LOOK ONCE

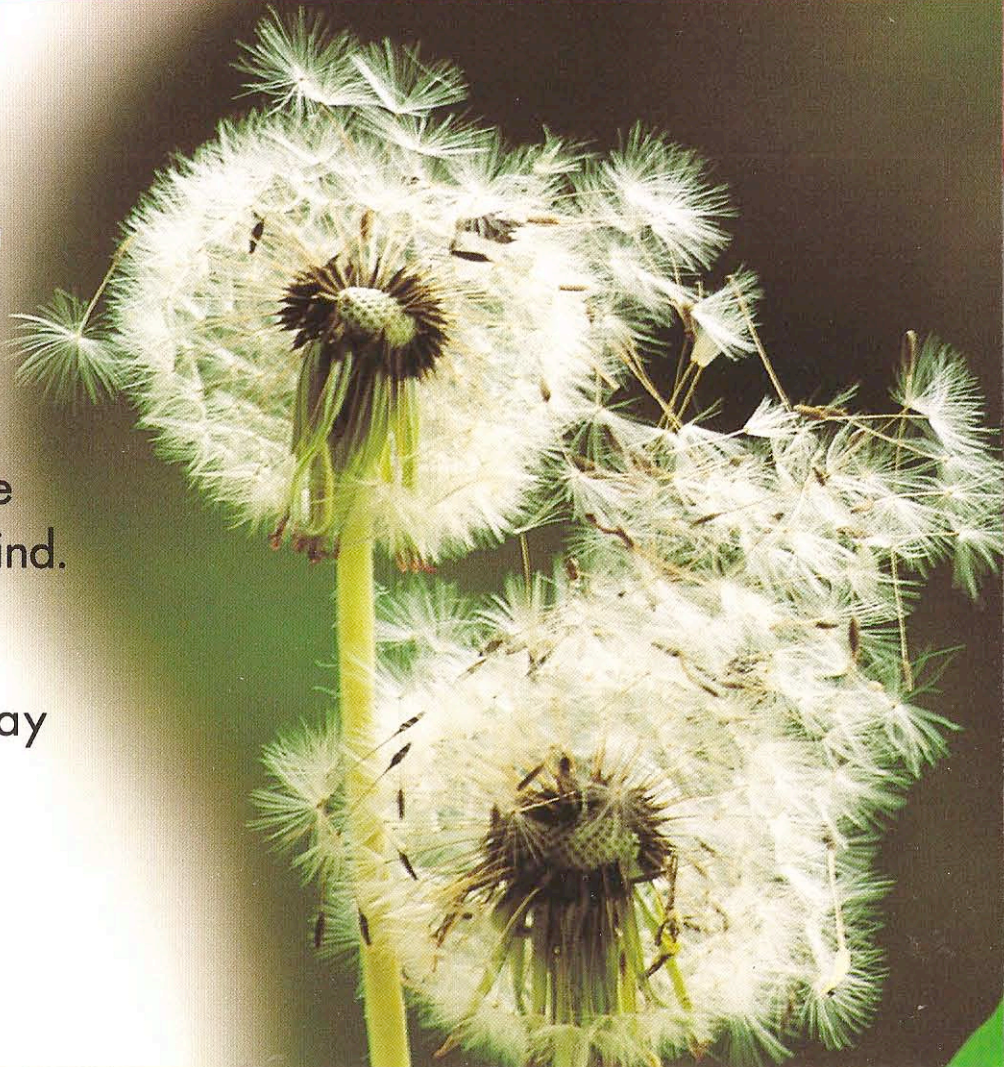

These little “parachutes” didn’t fall out of a plane.
They came from a plant.
Blow on them and they will fly through the air.

LOOK AGAIN

They are the seeds of a dandelion. Yellow dandelion flowers become soft, fluffy seed heads. Each seed has its own parachute. When the wind blows, these seed parachutes ride the wind.

No one knows where the seeds may land. They may land in another meadow where they can grow into more dandelions.

LOOK ONCE

This leg is made for hopping—
hopping in the grass.

LOOK AGAIN

A grasshopper springs into the air with its powerful legs. The back legs have spines. These spines grab onto plants. The grasshopper holds on while it eats a grassy meal.

A grasshopper "sings" by rubbing its wings to make a loud noise. This is how male grasshoppers attract mates.

LOOK ONCE

What animal has a white tip
on its red tail?
If you know,
you're as clever as a . . .

LOOK AGAIN

. . . fox! The red fox uses its tail for balance when it runs through the meadow.

It looks for a red tail with a bright white tip when it wants to find another red fox.

The red fox covers its nose with its tail when it goes to sleep.

LOOK ONCE

A.

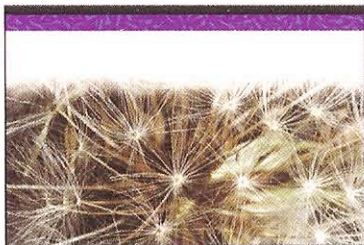

B.

C.

D.

E.

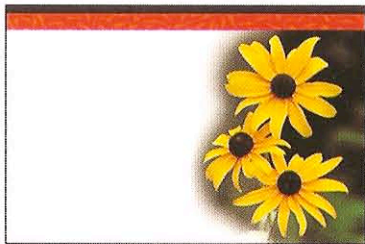

F.

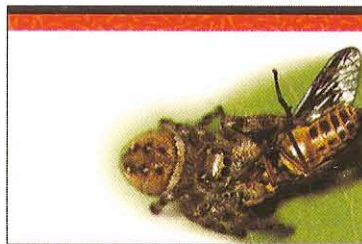

G.

Look closely. Can you name these plants and animals?

LOOK AGAIN

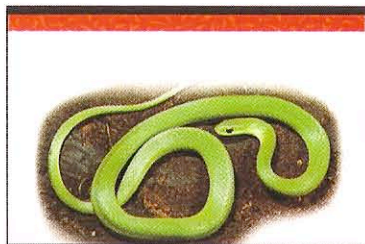

A. Black-eyed Susan

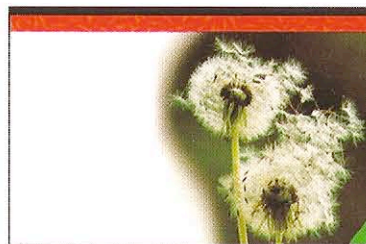

B. Jumping spider

C. Fawn

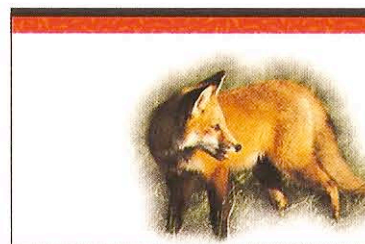

D. Smooth green snake

E. Dandelion

F. Grasshopper

G. Red fox
