We Test is Australia's first approved at-home urine test that detects ketones, dehydration, glucose, protein, vitamin C, pH levels, white blood cells, nitrite, urobilinogen and blood. We Test® provides information about your urine in a similar way to a pregnancy test - one quick wee on a strip provides information on several different health indicators. The strip can be also placed in a nappy for testing little ones.

* Three tests are included in each pack.
