SCANNER SETUP GUIDE

Product Description

Charge the scanner

Connect Scanner with your host through USB cable (provided by Netum) or take a DC plug and charge it on an electrical wall outlet.

- Red Light - Charging
- Green Light - Fully charged
- Improtant Notes: DC Plug: V: 5V; A>500mA

Warning Tone:

Low battery warning - 2 beeps, LED in red flashing twice

Running out of battery - 5 beeps, LED in red flashing 5 times

Scanning will not read any barcodes when it's running out of battery.

Get Battery Volume

By scanning below command barcode will get rough battery volume.

Firmware Version

Read below command barcode to check scanner firmware version.

Barcode Programming

Netum barcode scanners are factory programmed for the most common terminal and communications settings. If you need to change these settings, programming is accomplished by scanning the bar codes in this guide. An asterisk (*) next to an option indicates the default setting.

Connection Way

Characters can be transmitted to your device via bluetooth, USB receiver or USB cable after each scanning, you can choose one of the connection ways to connect scanner with your device.

USB Wired Connection

1. USB HID Wired Connection

By default, the scanner is in HID mode as a Keyboard device. It works on a Plug and Play basis and no driver is required.

Steps on how to transmit characters via Type-C cable:

- 1) Connect scanner with your computer via type-C cable.
- 2) Press the power button.
- 3) Setup keyboard language,refer to page 7.
- 4) Locate cursor on the place where you want scanner to output the characters then you can start to scan.

*USB Cable as Keyboard (HID)

2. USB COM Port Emulation

If you connect scanner to the Host via a USB connection, by scanning below command barcode the USB COM Port Emulation feature allows the host to receive data in the way as a serial port does (no driver need for win 10 or above).

USB Cable as Virtual COM

USB Wireless Connection

1. USB Wireless connection (HID Mode)

Steps on how to transmit characters via USB Dongle (HID Mode):

- 1) Plug USB dongle into your computer.
- 2) Press the power button.
- 3) Setup keyboard language,refer to page 7.
- 4) Locate cursor on the place where you want scanner to output the characters then you can start to scan.

*USB Dongle as Keyboard(HID)

2. USB DONGLE AS VIRTUAL COM

Plug the USB dongle into your device, by scanning below command barcode, the USB COM Port Emulation feature will allow the host to receive data in the way as a serial port does. (no driver need for win 10 or above).

USB Dongle as Virtual COM

Bluetooth Connection

Steps on how to transmit characters via bluetooth HID mode:

- 1) Press power button.
- 2) Scan "Bluetooth Transmit".
- 3) Turn host device's Bluetooth on and find "E barcode scanner" from your bluetooth list, tap it and pair.
- 4) Setup keyboard language, refer to page 7.
- 5) Locate cursor on the place where you want scanner to output characters then you can start to scan.

Important Notes:

Make sure the device is in range with Bluetooth turned on.

If a connection is made, the blue light will stop blinking and turn solid.

If a connection is not made after several attempts, the scanner will emit a long beep (and the blue light will turn off).

Bluetooth Transmit

1. Bluetooth Basic Mode (HID) *

- NO software installation needed
- Connects to most devices
- Scanner interacts with host device like a keyboard

AT+MODE=2

2. Application Mode (Apple Specific Serial Profile)

- For iOS Devices

- If you have an iOS application that supports our Scanners this is the mode to use.

AT+MODE=3

3.Application Mode (Serial Port Profile)

- For Android or Windows
- Software installation is required.
- If you have an application that supports this is the mode recommended.

AT+MODE=1

Transmission Speed Via Bluetooth Connection

By scanning the appropriate barcode will change bluetooth transmit speed

AT+HIDDLY=10

High transmit speed

AT+HIDDLY=45

Low transmit Speed

Scanning Mode:

*Trigger Mode (Default)

Scanning this bar code will enable the scanner to enter manual trigger mode.

Trigger Mode

Auto Sense Mode

Scanning this bar code will enable the scanner to enter auto sense mode.

Auto Sense Mode

Continuous Mode

This mode enables the engine to scan/capture, decode and transmit over and over again.

Continuous Mode

Keyboard Language

For example If you use French Keyboard, scan command barcode of "French keyboard". If you use a US keyboard you can ignore this step.

Data Uploading Mode

If you are heading for a working area which lies outside the Bluetooth signal range, you may activate scanner's store mode, following steps described below. Under this mode, all scanned data will be stored directly into the buffer memory of the device. Furthermore, the data entries will be permanently saved in the buffer memory prior to the manual upload into the working station, so that you may upload them when you are near your working device.

Quit Offline Mode

By scanning the following barcode, the device leaves the offline mode, normal mode will be reinitialised.

*Quit Offline Mode

Offline Mode

By scanning the following barcode, the offline mode will be activated

Offline Mode

Output Stored Data

By scanning the following barcode, all data entries in the buffer memory can be manually uploaded after reconnecting to the working station.

Output Stored Data

Output Total Entry

By scanning the following barcode, the gross quantity of the uploaded data entries will be summarised .

Output Total Entry

Clear Memory

By scanning the following barcode, all data in the buffer memory will be deleted.

Clear Memory

Get Battery Volume

Scan below command barcode to get battery rough volume

%BAT_VOL#

Set Length Range for Code39

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for Code 39 may be set for any length, one or two discrete lengths, or lengths within a specific range.

NOTE When setting lengths, single digit numbers must always be preceded by a leading zero.

One Discrete Length

This option limits decodes to only those Code 39 symbols containing a selected length. Lengths are selected from the *Numeric Bar Codes* in appendix. For example, to decode only Code 39 symbols with 14 characters, scan Code 39 - One Discrete Length, then scan 1 followed by 4. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix.

Code 39 - One Discrete Length

Two Discrete Lengths

This option limits decodes to only those Code 39 symbols containing either of two selected lengths. Lengths are selected from the *Numeric Bar Codes* in appendix. For example, to decode only those Code 39 symbols containing either 2 or 14 characters, select **Code 39 - Two Discrete Lengths**, then scan **0, 2, 1**, and then **4**. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix.

Code 39 - Two Discrete Lengths

Length Within Range

This option limits decodes to only those Code 39 symbols within a specified range. For example, to decode Code 39 symbols containing between 4 and 12 characters, first scan **Code 39 - Length Within Range**. Then scan **0, 4, 1, and 2** according to *Numeric Bar Codes* in appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix

Code 39 - Length Within Range

Any Length

Scan this option to decode Code 39 symbols containing any number of characters

Code 39 - Any Length

Code 39 Check Digit Verification

When this feature is enabled, the scan engine checks the integrity of all Code 39 symbols to verify that the data complies with specified check digit algorithm. Only those Code 39 symbols which include a modulo 43 check digit are decoded. Only enable this feature if your Code 39 symbols contain a module 43 check digit.

Verify Code 39 Check Digit

*Do Not Verify Code 39 Check Digit

Transmit Code 39 Check Digit

Scan this symbol to transmit the check digit with the data.

Transmit Code 39 Check Digit (Enable)

Scan this symbol to transmit data without the check digit.

*Do Not Transmit Code 39 Check Digit

Enable/Disable Code 39 Full ASCII

Code 39 Full ASCII is a variant of Code 39 which pairs characters to encode the full ASCII character set.

Enable Code 39 Full ASCII

1020110

*Disable Code 39 Full ASCII

NOTE Trioptic Code 39 and Code 39 Full ASCII cannot be enabled simultaneously. If you get an error beep when enabling Code 39 Full ASCII, disable Trioptic Code 39 and try again.

Set Lengths for Code93

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for Code 93 may be set for any length, one or two discrete lengths, or lengths within a specific range.

One Discrete Length

Select this option to decode only those codes containing a selected length. For example, select **Code 93 One Discrete Length**, then scan **1, 4**, to limit the decoding to only Code 93 symbols containing 14 characters. *Numeric Bar Codes* is in appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix

Code 93 - One Discrete Length

Two Discrete Lengths

Select this option to decode only those codes containing two selected lengths. For example, select **Code 93 Two Discrete Lengths**, then scan **0, 2, 1, 4**, to limit the decoding to only Code 93 symbols containing 2 or 14 characters. *Numeric Bar Codes* is in appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix.

F2010A0B023700011

Code 93 - Two Discrete Lengths

Length Within Range

This option sets the unit to decode a code type within a specified range. For example, to decode Code 93 symbols containing between 4 and 12 characters, first scan **Code 93 Length Within Range**, then scan **0, 4, 1** and **2** (single digit numbers must always be preceded by a leading zero). *Numeric Bar Codes* is in appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in appendix..

Cancel Barcode

To change the selection or cancel an incorrect entry, scan the barcode below.

Cancel

Hide Prefix or suffix digits

The start/middle/end of barcode chars can be hidden. After scan below hide set barcode, scan a double-digit hexadecimal number that you want to hide char length(00~FF e.g. hide length 4, scan 0, 4).

\$SCAN#5

Hide Barcode Start Chars

\$SCAN#6

Hide Barcode Middle Char Start

\$SCAN#7

Hide Barcode Middle Chars

\$SCAN#8

Hide Barcode End Chars

Output Format

To change the Scan Data Transmission Format, scan one of the eight bar codes corresponding to the desired format.

\$DATA#5

Enable Hide Barcode Start Char

\$DATA#4

Enable Hide Barcode Middle Char

\$DATA#3

Enable Hide Barcode End Char

To Hide chars of barcode Start/Middle/End: Procedures

1. Scan the Hide Barcode Start / Middle Start / Middle length / EndChars symbol.
2. Determine the hex value for the length you wish to enter(hide 4 chars, scan 0,4; hide 12 chars, scan 0,C).
3. Scan the 2 digit hex value from the **Numeric Bar Codes**
4. Scan the output format to enable or cancel hide char function.

Custom prefix and suffix

Maximum 20 prefixes and 20 suffixes can be added to scan data for use in data editing. To set these values, scan a double-digit hexadecimal number (i.e. two bar codes) that corresponds to ASCII values. See the [Table 1](#) and [Numeric Bar Codes](#) in appendix.

To Add a Prefix or Suffix:

1. Scan command barcode of " Add Prefix" or" Add Suffix ".
2. Check the prefix or suffix hex value from the ASCII Chart.
3. Scan the 2 digit hex value from the Numeric Bar Codes
4. Repeat Steps 2 and 3 for all the prefix or suffix that you want to add.
5. Scan the output format to enable or disable prefix/suffix output.

\$SCAN#2
