

Ceiba

design Luis Arrivillaga

Coat-hanger composed by four "C-shaped" elements, of various heights, joined together by means of a central pin that, thanks to a "compass" opening, allows to place each element in various positions; the minimum recommended opening angle between elements is 90°. The structure, realized by a CNC machine, is in solid ash wood, Ø30mm, with acrylic painting finish: natural or charcoal dyed. The spacer rings, Ø 30mm, placed between each element, are in black phosphate coated steel. Floor support secured by plastic feet.
