

Resort

design : Metrica by Bruno Fattorini, Robin Rizzini

Flexible, modular architectural structure that can be used both as a wide parasol and for the creation of articulated covered passageways.

Structure: shaped profiles made of aluminium, matt varnished in the colours in the collection; ground support bases in moulded cast iron varnished in the same colour of the structure and provides with adjustable spacers.

Upholstery:

- white polyester fabric
- Madras fabric
- Tamil fabric
- Thuia fabric.

Notes:

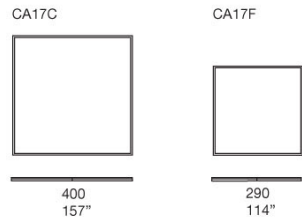

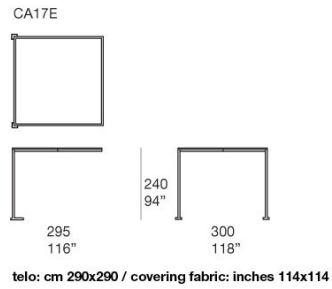

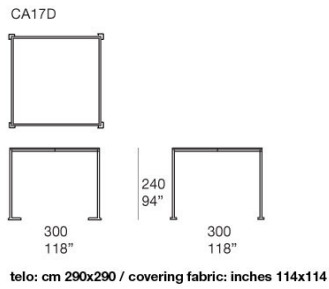

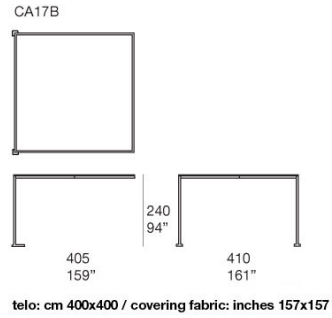

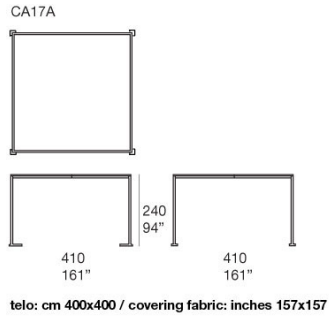

Resort can be freely placed on the ground or can be anchored to bearing surfaces.

Resort elements can be independently positioned side by side or can be joined together to create large sheltered spaces. It is possible to build articulated structures with single Resort elements and extensions that are hooked to the main structure and are provided with two further bases.

The elements can be connected also through a bridge element that joins them without necessity of further bases.

The covering is fastened to the structure by means of a profile in thermoplastic rubber, that guarantees its prompt release in case of excessive wind load.

With polyester covering, the structure is always matt varnished in avorio colour.
