

K-THRIVE™ FORMULA D

WHERE IT COMES FROM AND WHY IT IS SAFE

BLOOD ORIGIN

K-Thrive is made from spray-dried blood proteins hygienically collected from USDA-inspected abattoirs located in the United States.

SPECIES

Only porcine blood components are used in making K-Thrive.

PROCESSING

The blood proteins used in K-Thrive are processed under strict USDA and FDA regulations in Iowa.

SAFETY

Multiple safety stages in the WINPRO production process assure that it is free from harmful bacteria, salmonella, coliform and E. coli

BLOOD IS FOOD

Blood is found in most fresh meats and fish and in some sausage products, along with most dry and wet dog and cat foods.

BLOOD BENEFITS

The blood proteins used to make K-Thrive contain highly beneficial nutritional components including IgG, IgA, serum, plasma and albumin.

THE CIRCLE OF LIFE

We use livestock animal blood to create products that help dogs live more fully. Plus, using the blood keeps it from going to rendering or into landfills.

BLOOD & DOGS

Dogs are by nature carnivores and they are attracted to the blood in meat. In addition, fresh meat diets for dogs continue to increase in popularity.
