- **MAKE YOUR STATION PUBLIC**  
Create and manage your charging station and make it available via the public network.

### Available solutions

- EVduty-40 Wall Terminals
- Single Pedestal
- Double Pedestal
- Level 3 Charging Terminal

## Effectively manage your energy consumption with the power link function between multiple terminals

The owner of several EVduty EVC30 charging stations (all equipped with a Smart-Home or Smart-Pro Module) installed inside the same charging station can configure them in power sharing mode. This power sharing configuration is named "Link". There may be several "Liaisons" per charging station.

This function allows a group of terminals to share the available power depending on the capacity of the protection circuit breaker that protects the terminal supply and the number of terminals currently supported. This function offers two levels that can be used separately or simultaneously.

### History of activities

By using the EVduty mobile app, the station manager or the owner of a charging station can view the history of activities that took place on his charging station. It can be the start / stop of a recharge session, an error, etc.

## Plan your commercial installations

### New constructions

From the beginning of your new construction project, plan the necessary components for the installation of charging stations.

### Hotels and Restaurants

The installation of a charging station in your company creates new business opportunities for a new clientele. Join this new segment of the market with EVduty products and Elmec's expertise.

### Workplace EV charging

When multiple employees opt for an electric car, proper planning and refueling strategy is required. Innovate with a competitive advantage to retain your connected employees and those of tomorrow.
