

GFT100 Body-Solid Functional Trainer

Body-Solid[®]
Built for Life

GFT100 Functional Trainer

The Body-Solid GFT100 Functional Trainer is a versatile, reliable and space-saving functional trainer for home and garage gyms and fitness facilities.

The dual weight-stack design provides isolateral movements and balanced training. The Body-Solid GFT100 features a 1:2 stack to resistance ratio allowing for smaller incremental weight adjustments and an amazing range of motion. Add an optional Body-Solid bench or stability ball for even more workout variety. Fully-adjustable, swiveling pulleys offer complete workout freedom; and the included attachments (aluminum stirrup handles, triceps rope, chin & dip belt and double swivel bar) will give users a near-unlimited number of workout options. Use the included accessory rack to store each of these items and keep workout spaces clean and organized.

Weight: 633 lbs
