## **Multifunction Tester**

- Two and three wire non-trip loop testing for RCD protected circuits
- Type-B RCD and 3-phase RCD testing for industrial applications with no Earth
- 3-terminal earth test and stakeless testing for electrode resistance measurement
- Internal memory and Bluetooth® communications
- EN61010 CAT IV safety rating and tough IP54 case
- **■** Megger Loop impedance **Confidence Meter™**
- RCD coil impedance immunity

### **DESCRIPTION**

The MFT1701 series is a range of 4 instruments for testing low voltage electrical installations to BS7671. They provide all the tests required to complete the necessary electrical certification for industrial, commercial and domestic fixed wiring installations, including:

- TRMS System voltage and frequency measurement
- Insulation test at 100 V\*, 250 V, 500 V and 1000 V Including input protection against live circuits up to 600 V even when insulation test is locked-on
- Continuity resistance at 200 mA or 15 mA
- Automatic start no need to press TEST so leaving both hands free to hold probes
- Resistance range up to 100 kΩ with fast continuity buzzer at selectable thresholds
- Earth loop test
- 2 and 3 wire non-trip range
- 2 wire Hi current including phase to phase
- Prospective fault current measurement up to 20 kA
- RCD testing including:
  - Type AC, A, S, B\* and programmable RCDs
  - 3-phase RCDs\*
  - Auto-test routine
  - Fault (Touch) voltage display
- Earth spike testing
  - 2-pole/3-pole\*\*
  - ART\*\*
  - Stakeless techniques \*\*
- \* Model dependent
- \*\* Optional accessories required

The MFT1741 also includes:

- Confidence Meter™ An adaptive loop test and display method for electrically noisy circuits
- Enhanced loop testing hardware To remove the effects of RCD on loop impedance values

The Confidence Meter™ technology is ideal for enhanced Earth Loop Impedance testing in electrically noisy environments. Traditional Loop Impedance methods are susceptible to circuit noise during the measurement phase. If the AC waveform changes during this period, from noise or harmonics, the distortion can create significant variation from test to test.

The Confidence Meter™ analyses and adjusts for these variations and provides a far more stable result every time, removing the need for repeated tests.

In addition, the MFT1741 also supports a hardware measurement technique, removing the influence of any RCD or RCBO on the measured loop impedance value.

All instruments are IEC 61010 CAT IV 300 V rated for connection to low voltage systems with no protective device, so safe for connection anywhere on the system right up to the source transformer without risk of damage from large transient spikes.

The unique modern styling allows it to be operated while stood on the floor, a ladder-shelf or platform, hung around the neck or handheld. Dual TEST and LOCK buttons - one pair at each end - makes the testers easy to operate left or right handed.

Quick to pick up and use, the controls are colour coded to make range selection easy and fast. They also reduce the chance of using the wrong function or range.

www.megger.com

### **Multifunction Tester**

The large crystal clear backlit display uses the patented Megger digital/analogue arc, providing indication of fluctuating readings while the dual digital readout shows precise values of key measurements simultaneously with the test parameters, such as the output voltage on insulation testing as well as the resistance value in  $M\Omega$ .

Visible and audible safety warnings are paramount when testing high-energy systems and the MFT1701 series includes full input protection and safety warnings when a hazardous voltage is present. If live voltages exist on a circuit during insulation or continuity testing, the voltage is displayed on the screen. If this voltage exceeds a safe level, further testing is inhibited and a warning beep sounds.

The MFT1731 features internally rechargeable batteries and charger with a charge time of less than 4 hrs.

Fully compliant with all requirements of IEC 60364 derived standards including VDE 0100 and BS 7671, the MFT includes all the latest measurement technology in a light-weight compact design, fully protected and usable on single phase and 3 phase installations.

Key measurement functions include two and three wire non-trip loop test technology for fast repeatable results, comprehensive testing of RCDs including type B, and integrated 3-terminal and stakeless clamp techniques for earth electrode testing.

The MFT1731 and MFT1741 include built-in memory and Bluetooth® communications for uploading test results to CertSuite Certification Software (Visit **CertSuite.info**).

The MFT1701 series has been designed for tough environments and ultimate reliability. Features include a rubber over mould for extra protection and grip, IP54 protection against dust and water and an EN61010 CAT IV safety rating. Its class leading input protection ensures the MFT can withstand accidental misuse and voltage transients when other testers can't.

All this in an intuitive and easy to use instrument with no hidden menus or complicated screens. Tests are easily selected using the colour coded rotary switches with results clearly displayed on the high contrast, dual measurement, backlit display. Included with the instrument: standard 3-wire leadset and a mains test lead, a switched probe for fast and easy testing\*, a full 12-month calibration certificate and warranty upgradeable to 3 years. The MFT1711 and MFT1721 are supplied in a robust moulded case, and the MFT1731 and MFT1741 is supplied in a large soft pouch with plenty of additional space for optional extras like a few tools and the earth electrode test kit, comprising 2 spikes and 3 long test leads.
