

After printing, make sure to measure the control dimension shown below first. This must be exactly 5cm long (including start end marking). If the measurement is not correct, please check your printer settings - A4 portrait format, no page margins, no page adjustment, print size 100% - and make another printout.
With the correctly printed ring template you now have the possibility to determine the ring size of your partner.

Size determination with a ring from your partner

Place a ring, which your partner often wears, at the bottom of the matching circle. The inner circumference must be flush with the outer edge of the circle.
