

Congratulations! You are moments away from enjoying the benefits of Flip-It® Caps. The time consuming and frustrating days of pounding, shaking, cutting, and balancing bottles upside down in an attempt to extract their thick contents are now behind you.

Parts are easy to identify:

SEALING GASKETS: Sized to fit each part precisely, these are used INSIDE EVERY BASE CAP AND ADAPTER for leak proof seals. Take a moment to familiarize yourself with the different sized gaskets.

BASE CAPS: These have 3 legs and a push/pull valve on the bottom.

Use alone for bottles with this size neck.

OR

With an adapter for bottles with smaller necks.

ADAPTERS: Threaded inside and out, these are used to adjust the thread size of the Base Cap for bottles with smaller necks.

Assembly instructions:

Step 1.

Prepare a **BASE CAP** by inserting the appropriate, pre-cut gasket and pressing it down completely.

BASE CAP is now ready to be used on bottles with this size neck thread. **NO ADAPTER REQUIRED**, simply screw onto the bottle and flip. Within moments the product will arrive at the valve, ready to be used. Leave the bottle upside down until you've used up all the contents.

Step 2.

AS NECESSARY, for bottles with smaller necks:

Choose the **ADAPTER** which fits the particular bottle you want to flip, and **insert** the appropriate pre-cut **gasket into the adapter**. Press down completely. Screw the ADAPTER into the BASE CAP, then screw onto the bottle and flip.

Use instructions:

Pick up the bottle and gently pull the valve down to open. Squeeze the bottle to dispense as much product as you need, then push the valve up to close. If the valve is not closed, most bottles will topple over, to alert you that the valve is still open. If this happens, make sure to close the valve, then the bottle will stand properly.

Prior to Food use, as you would with any food contact item, common sense suggests you wash all parts in warm soapy water, rinse, then allow to air dry. All parts are top rack dishwasher safe. The valve tips are removable with a gentle wiggle and tug in order to do the most thorough cleaning.

Made from inert and durable plastic, the BPA free, Food Safe parts (including the gaskets) can even be placed into boiling water without fear of damage. Allow to cool and dry prior to use.

Flip-It caps can remain on your bottles as long as you need them to. Once a bottle is emptied, remove the Flip-It, and repeat the cleaning process if required. The Flip-It is then ready to be used again, either on the same size bottle, or on a different size bottle with an adapter change.

It is our suggestion that Flip-It's used for non-food applications not be used for foods.

PLEASE MAKE SURE TO USE ONE GASKET INSIDE EACH BASE CAP AND ANOTHER INSIDE EACH ADAPTER. IF YOU ARE EXPERIENCING LEAKS, CHANCES ARE YOU HAVE NOT USED GASKETS.

Plastic bottle neck threads are standardized around the world. Occasionally, however, a manufacturer will create a custom thread design that the basic Flip-It caps will not work with. Not designed for snap caps, only for threaded caps. Flip-It parts fit the most widely used, popular thread sizes.
