

Tarmac Reviver 5L

Tarmac Reviver is a blend of thick bitumen and filler that dries to a black, low sheen finish.

Stained and weathered tarmac can spoil the appearance of your property, so spruce it up with this easy-to-apply dressing.

- + Avoid costly resurfacing – refurbish instead
- + Cover up unsightly stains
- + Extend the life of your asphalt

Why

Cover up exterior stains and disguise the damage caused by weathering on asphalt or tarmac drives, paths or anywhere else by giving it the Tarmac Reviver treatment. Paint it on and you'll be amazed at how new your asphalt looks.

Tarmac Reviver is based on bitumen and over a period of years it will very gradually weather down to grey as all asphalt does.

Prepare It

All you need to do is to ensure that the surface is clean, dry and free from loose material. Scrape off any moss that might show through. If the area is really mossy then you may need to pressure wash it first.

Apply It

Load up a roller with the mixture and you're away. Don't flood the surface with the dressing as this will lead to a longer drying time and the possibility of an uneven finish. This will also reduce the coverage. Use a paint brush on the edges and, as with the roller, don't overload it. If you find the surface is pitted then make your own mortar with Tarmac Reviver and dry sand. Firstly, prime the pits with Tarmac Reviver and then trowel in the mortar you've made. Do not apply at a surface temperature of less than 5°C.

You'll need

9" Roller and Tray.

Cover It

Coverage is 5-10m² per 5 litres depending upon the substrate. You only need one coat under normal conditions.

Dry It

At temperatures between 5°C to 20°C the product will dry in 2-5 hours. Rain will increase the drying time, so we recommend that you don't let rain get on the surface for at least 30 minutes after you've applied it.

Important...

Tarmac Reviver is a surface dressing only and won't repair or strengthen a damaged surface. We only recommend its use on bitumen surfaces, at least 3 months old, as it could soften any surface containing coal tar.

If in doubt, test a small area and wait 24 hours to see if any softening has occurred.

Store It

The shelf life of Tarmac Reviver, if unopened, is one year. Do not allow to freeze.

Disposal and Safety information

Please see the Material Safety Data Sheet at www.paintpeople.co.uk for safety information.

Availability

Tarmac Reviver is supplied in 5 litre containers. Available from www.paintpeople.co.uk
