

Utility Floor Paint 2.5L

Utility Floor Paint does all sorts – it seals the floor, along with dustproofing it and the gloss finish is easy to keep clean. It's a single pack polyurethane which is hard wearing (unusually so for a single pack coating) and simple to apply. A real benefit of a single pack paint, is that you can use as much or as little as you like and save the rest for touching up any damaged areas at a later date.

- + Hard wearing polyurethane coating that will transform dull concrete
- + Tough enough for utility rooms and more
- + Single pack paint which means you can use as much as you like when you like
- + Gloss finish is easy to keep clean and maintain
- + Versatile – you'll find so many uses for it
- + Can go on to concrete, wood, bare floors, existing (well bonded) paint and most metal surfaces (but check with us first)

Where

Utility rooms, storage areas, playrooms, sheds and outhouses.

Prepare It

Apply PaintPeople™ Concrete Etchant to a bare, relatively clean concrete floor. This will both clean and roughen it up at the same time to give it a good enough 'key' to paint. Also use it if your concrete is new, (at least 8 weeks old) - it gets rid of dust, reduces any alkalinity that may be present in the concrete and, as once again, it provides a 'key'. If the floor is greasy clean it with our Oil & Grease Remover, making sure you remove any weak, loose paint or heavy deposits of dirt first. You can do this just by scraping it off with a long handled scraper or something similar. For previously painted floors remove any loose paint particles by abrading it with a wire brush or sandpaper. Also, if the paint is glossy, again abrade it to dull down the shine and to leave a sufficient 'key'. Good preparation is so important if you want the job to go well and the paint to last.

Apply It

First of all give the Utility Floor Paint a good stir. Apply it with a roller or a brush. You should apply this in warm, dry conditions with good ventilation. Don't use it if the temperature goes below 15°C.

You'll need

- 9" Roller and tray
- 2" Brush
- 5" Brush

These products are available on our website and can be shipped with your order for Utility Floor Paint so you can get the job done quickly.

Dry It

The first coat should be left for 16 hours before applying the second coat (based on decent drying conditions as mentioned before). If more than 5 days elapse, the first coat should be lightly abraded before the second coat is applied. Depending on conditions, the area will be ready for foot traffic (but not heavy foot traffic) in around 16 hours, and ready for full use in around 36 hours - (just make sure it's fully cured before you really put it through its paces!).

Cover It

If you are using a roller and applying two coats you can expect coverage of 20m² per 2.5 litres per coat. You will get less if you are using a paint brush for cutting in.

Clean It

White Spirit should be used to clean applicators and spillages.

Don't use:

For areas where cars are parked. If this is the case use our Garage Floor Paint as it is better suited for this.

Outside.

If the intended surface is very smooth, such as power floated concrete. If you don't know whether it is power floated or not, do the 'water test'. Simply tip a cup of water on the floor, if it disappears then it's porous enough to paint.

Do Use:

Concrete Etchant, if your concrete is smooth or new (at least 8 weeks old), where chemical hardeners have been used, or where there is laitance (dusty cement particles).

Oil & Grease Remover. This is solvent free and virtually odourless and is great at removing grease before painting. Can be used in concentrated form for heavy grease or oil, or you can dilute it 50:50 with water to remove lighter deposits or as a general maintenance tool.

Store It

Store at temperatures above 10°C. The shelf life of Utility Floor Paint, if unopened, is one year. Do not allow to freeze.

Disposal and Safety information

Under certain conditions the surface can become slippery.

Please see the Material Safety Data Sheet at www.paintpeople.co.uk for safety information.

Availability

Utility Floor Paint is available in 2.5 litre units from www.paintpeople.co.uk

Colour Range

While great care is taken with the colour samples shown, no guarantee can be given that they represent exactly the colours offered.
