

ROPE RATCHET TENSIONING DEVICE

Net System Tensioning System

** In your system instructions, please disregard references to the Net Tension Strap.*

The enclosed Rope Ratchet Tensioning Devices have been designed to improve the ease of assembly and adjustment of your volleyball system. Please note the following supplemental instructions for the use of this improved device.

1. Place the rope through eyelet on the net side tape and wrap rope around pole connecting carabineer clip to loop end of rope.
2. Once the net is tight, even and/or centered on court, the excess rope can be removed. (REMEMBER to leave enough rope to get started) Heat seal end of rope after excess is removed.
3. If rope falls out of the Rope Ratchet Device, take note of the orientation in the figure below and feed rope through device and around metal spool.
