

# VB92

## Installation of Volleyball Wall Brackets

1. Choose an appropriate place for the mounting of your wall brackets.
2. If desiring to store your poles vertically, the upper bracket should be located approximately 9'7" from the floor.
3. Attach the bracket with a wall anchor suitable for your specific needs.
4. The lower bracket should be located directly below the upper bracket approximately 4" above the floor. Anchor this bracket the same way as in Step 3.
5. Alternately you can also mount the brackets to allow the poles to be stored horizontally at a convenient height and approximately 9'3" apart.
6. Your brackets are now ready to be used. If you have chosen vertical storage, lift the pole into the top bracket until it is just above the lower one, and then insert the pole into the lower bracket. Repeat for the second pole.
7. If you choose a horizontal storage position, insert a pole into either bracket and into the position closest to the wall. Then repeat for the second pole.
8. To remove the poles, just reverse the process in Step 6 or 7.
