COBALT BLUE Australasia provides the information submitted in this Product Information Sheet based on our current knowledge and experience. In view of the many factors that may affect processing and application, these data do not relieve users from the responsibility of carrying out their own tests and experiments; neither do they imply any legally binding assurance of certain properties or of suitability for a specific purpose. It is the responsibility of those to whom we supply our products to ensure that any proprietary rights and existing laws and legislation are observed.

Product: SAW

Description: ACID DESCALER for REMOVING SCALE and RUST from EQUIPMENT.

FEATURES

- SAW is a clear pale yellow liquid. It is a strong acid for removing scale and rust off equipment.
- SAW is a concentrated product so a little goes a long way. It is based on phosphoric acid, a strong acid that doesn't have unpleasant fumes like hydrochloric or nitric acid.
- SAW contains a low foaming detergent to aid in penetration of soils for more effective descaling

HOW & WHERE TO USE

- SAW is normally used at dilutions from 1:10 to 1:100 dependent on the amount of scale or rust to be removed.
- It can be used to descale commercial dishwashers. Add from 500 ml to 1 litre to wash tank and run for a few cycles. Then empty, rinse out and refill.
- To descale urns, bain-maries, kettles, etc. use at concentrations from 1:10 to 1:100 and allow to soak for a few hours.
- If descaling aluminium equipment use dilute solutions and do not soak for long periods. Rinse with plenty of water afterwards.
- SAW can also remove barnacles and scale off boats, and cement off brick work. Use at 1:5 and scrub carefully over surface. Wear chemical resistant goggles and protective clothing.
- It can also remove heavy rust deposits from old tools. Simply soak in a solution until rust is removed.
- SAW can cause burns. Avoid all contact with skin and eyes, and wear suitable chemical resistant clothing.
