Connecting To A Vehicle Battery continued

Getting Started
1. Press the POWER button to turn on your inverter
2. When powered on the Input Voltage LED is green

Setting Up Your Inverter
Cobra Pro Power Inverters are equipped with (2) settings to accommodate battery run times for both professional trucks and other vehicles. From the factory the inverter defaults to a 11.5 Volt Low Voltage Alarm setting for professional trucks. It using a Cobra Pro Power Inverter with other vehicle types such as a car, van or RV, run time can be extended by changing the default Low Voltage Alarm to the alternate setting at 10.5 Volts.

Instruction For Changing Low Voltage Alarm Setting
1. Turn Power Inverter on
2. Press and hold the POWER button for 5 seconds or until Input Voltage LED turns blue
3. Once blue, the Low Voltage Alarm will be set to 10.5 Volts. The setting will not change when the inverter is turned off or the battery is disconnected (to go back to the default 11.5 Volt Low Voltage Alarm Setting, follow steps 1 and 2)
Thank you for purchasing the Cobra PRO 2500 Watt Inverter (Model CPI2500W)

The PRO 2500W is ideal for cross-country professional drivers, travelers, campers, RV enthusiasts or for when a power outage occurs.

Count on Cobra for Power Where You Need It.

Connecting To A Vehicle Battery (Please Refer To Diagram on Next Page)

1. Mount the inverter inside the vehicle in a well-ventilated location close to the battery.
2. Disconnect the NEGATIVE (-) or black battery terminal of the vehicle.
3. Route cables close to the battery.
4. For Items 5 and 6, you are installing (3) cables. (2) cables are needed for the PRO 2500 Watt Inverter.
5. Install the insulated terminal boots on the inverter end of the power cables (RED = positive, BLACK = negative).
6. Connect each BLACK Cable to the NEGATIVE (-) terminal on the inverter.
7. Connect each RED Cable to the POSITIVE (+) terminal on the inverter.
8. Connect the other end of the RED cable to the (+) terminal on the vehicle battery.
9. Visually inspect and make sure the red wire or its connectors are not touching any metal parts of the vehicle or the black wire connectors.
10. Connect the other end of the BLACK cable to the (-) terminal on the vehicle battery. Caution: There is normally a spark at the point of contact at the negative terminal.
11. Check all connections making sure the RED cables are connected to the POSITIVE (+) terminals and the BLACK cables are connected to the NEGATIVE (-) terminals.
12. Go to GETTING STARTED section.
