

RAD 480i Firmware R10 Release Notes

What's New in Firmware R10

Cedar Electronics is happy to announce the release of version R10 firmware for RAD 480i. We have developed several key improvements in this release which should continue to improve your experience with RAD 480i.

- Added K Low band option (detects K down to 23.95 GHz).
- This is only intended for international users where this type of radar is used. Note that enabling K Low will increase the amount of K band false alerts you receive. We strongly recommend not enabling this function in the US.
- Changed the default SEN mode to Medium

Previous firmware releases also include improvements to fix screen freezing, BlueTooth Communication, and general fixes.

How to Get the Update

Manual downloads are available via USB connection with your PC using the Cobra Software Update Installer from our website: **Update Your Device (cobra.com)**. If you have any questions, please contact our customer care team at 800-543-1608. A Mac version of the software is forthcoming.
