Difficult level 1 2 3 4 5 6 7 8 9 10

1.- Remove the front bumper off the car first. By remove all the tabs on the radiator cooling panel and the headlight eyelid molding.

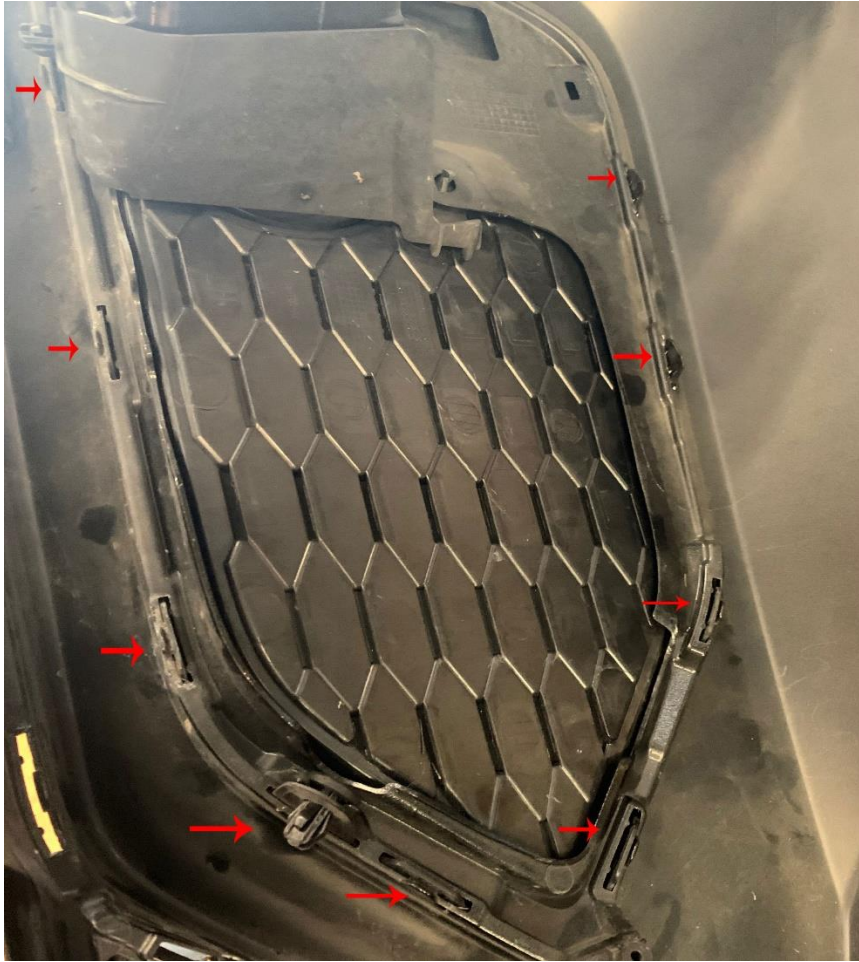

2.- After bumper removed from the car. Put it on a any surface to work on it.

3. – Remove the new Type-r Lip out of the package.

4.- Next step is to remove the foglight cover. Use a flat head screw driver to pry the tab and push the cover out. In order to remove the center grill. You need to remove the foglight cover first.

5.- After remove the foglight cover. Then you can unscrew the center grill screw then take the grill out.

6. Install the new grill on the bumper. Reuse the original screws and put the grill into the bumper tabs.

7. –Install the Type-R front lip on the bumper next. By align the mounting point with the grill. Then tight down the lip by using supply screws. Do not over tight by power tools. Make sure the screws not puncture through.

8. After that install the under panel with the front lip.

9.- Attach the under panel to the front lip. Using screws. Note do not puncture the screws through. There are two spot cut out does not need to be screw in.

10. After attach under panel and the lip together. We are ready to put the bumper back on the car now.

11. Next step is to attach the under panel to the bottom of the car using original tabs and bolts. Some holes might not require to use.

12. Last step is to do finish touch by apply the red vinyl tapes on the lip. We do carry the red tapes on our website if you would like to purchase extra.

Enjoy the FK8 Type-r Style Front Bumper.
