

# RESET GUIDE

Congratulations on completing your investigation!  
If you're preparing to regift your game for someone else to enjoy, here's a handy-dandy guide to repacking your copy of Best Served Cold in 5 easy steps.

## **STEP 1: REPRINT THE TIMELINE**

Your investigation timeline sheet is likely awash with annotations - time to replace it! You will find the replacement copy on the last page of this document.

## **STEP 2: REBOX THE EVIDENCE CARDS**

Pack all your evidence cards back into the box with the back of the cards facing up, remembering to shuffle the deck to ensure that all the correct evidence isn't located at the top.

**NOTE:** Keep the Victim and Culprit cards separate, they belong in File 1 and the Case Closed envelopes accordingly.

## **STEP 3: REPACK THE FILES**

With only a few exceptions, the 3 manilla files and the red 'Case Closed' envelope house all of the game's documents and ephemera. To know what belongs where, turn to the itemized contents list inside each file - you'll find them on the right-hand side. These lists detail all the documents you should place inside each file before repacking the box.

**NOTE:** The order of the documents inside each file isn't critical, since the next player has the freedom to explore the content of a given file at their leisure.

To avoid spoilers the red Case Closed envelope doesn't list its contents, but when repacking it should contain the following:

Case Closed Police Report  
Completed Timeline  
Confessional Interview Transcript

## **STEP 4: RESET THE CADAVER**

Due to the nature of the materials, and the process of performing the autopsy for the first time, the cadaver's head and chest cavity's perforations will inevitably be separated during your investigation. Don't panic! It can still be rendered sufficiently replayable for another detective. The cadaver's most important feature is the internal contents of its head and chest cavities. To ensure the game will play correctly a second time, use the list below to ensure all the anatomical components have been placed back inside the corresponding cavity. Once 'reassembled', you can close the perforated flaps and seal the openings with a small strip of transparent sticky tape.

**NOTE:** It's not critical that the organs be replaced in their original order or orientation inside the cadaver. So long as all the anatomical components are placed inside the right cavities, the autopsy will function correctly for future playthroughs.

### **Head Cavity**

5x Skull fragments

### **Chest Cavity**

Heart

Liver

Large Intestines

Small Intestines

Bladder

Lungs

Stomach

Kidneys

Pancreas

With everything back in place and the openings lightly tapped closed, the cadaver can be folded and placed back inside the Coroner's Office body bag.

### **STEP 5: LEFTOVERS, & PACKING THE BOX**

After you've refilled Files 1 - 3 and the Case Closed envelope, you'll have 3 items left over. These should be:

Final Report Questionnaire

Introductory Internal memo (1/5)

Toe Tag

The Final Report Questionnaire should be clipped or placed on top of the red Case Closed envelope. The Internal memo (1/5) should be clipped or placed on top of the Instruction Booklet. Lastly the Toe Tag should be hung from the big toe inside the Instruction Booklet.

Now that all the documents have been returned, let's repack the box!

Final Report Form clipped to Case Closed Envelope (Bottom of box)

File 3

File 2

Evidence Card Deck

Body Bag & Cadaver

File 1

Internal memo (1/5) clipped to Instruction booklet (Top of box)

Now you're all set to assign this case to the next detective.

Remember to visit [mysteriouspackage.com](http://mysteriouspackage.com) for future Body of Evidence cases, and much more in the meantime. Thanks for playing!
