Specifications :

It's the new Lumihome® sensor driven strip led designed to deliver high quality lighting to a kitchen work surface or inside a dressing room. Its automatic switching system provides high freedom and optimal comfort. This strip is equipped with a sensor that allows managing to turn on/off the lights either by motion sensing (very convenient above a work surface) or by presence sensing.

If an object or a mass is located within a perimeter of less than 6 cm, the strip will not turn on.

As soon as the obstacle lies outside the perimeter the led will switch on (ideal for drawer and cupboard).

The 24 led SMD 2835 provides a powerful very nice warm white light while providing an ultra-low energy consumption of 5W only.

Made of excellent quality materials, this 50cm strip can be completed with an extension (optional with connectors that are included) in order to achieve an extended and/or angled lighting system. 3 additional strips can be added to this kit.

Installation is easy thanks to its fixing system by screw and its included transformer.

Features :

Consumption: 5W

Power: 400 lumens

Lighting: warm white 3000K

Dimension (l x h x p): 500x2x9mm

Warranty: 2 years

Gencode: 8423599991276 (Complete kit)

Gencode: 8423548757335 (Extension)
