

Datasheet

RS Lighting Controller Detector, PIR, Ceiling Mount, 230 V ac, 76mm Diameter

Stock Number: 711-8561

PIR Sensor

Detects movement within the unit's detection range (Fig.3), allowing load control in response to changes in occupancy.

IR Receiver

Receives control and programming commands from an IR (infrared) handset.

Light Level Sensor

Monitors the ambient light level, allowing load control based on minimum and maximum Lux Level and also for providing Maintained Illuminance (constant light) control.

Status LEDs

These flash Red and/or Green to indicate the following:

Power Input & Switched Output Connector (Channel 1)

Used to connect mains power to the unit and to connect a switched load.

Dimmable Control Output Connector (Channel 2)

Used to connect DSI/DALI controllable ballasts and transformers for dimmable loads.
