Chronic Venous Disease (CVD)
8 out of 10 patients that you see each day have Chronic Venous Disease. The prevalence of Chronic Venous Disease is 83.6%.

**Leg elevation is useful in treating Chronic Venous Disease**
- Increases venous blood flow
- Lowers venous pressure
- Reduces swelling
- Increases fibrinolytic activity
- Increase microcirculatory flow in liposclerotic skin

**Benefits of leg elevation**
- Lower risk of Deep Vein Thrombosis
- More rapid resolution of clots
- More rapid healing of venous ulcers

**Designed with the patient in mind.**
This leg rest is very comfortable and easy to use. Unlike other treatment methods, patients look forward to using the Venous Relief Elevation Device.

You sell it. We ship it. Your patients enjoy better venous health.
