

# MULTIMIC

## How to Choose the Right Connector?

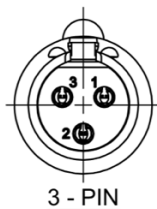

Thankfully, with our latest development, we have made this a lot simpler! We've changed the game, with the new, **world first MultiMic!** Basically, if the Aeromic, Cyclemic or EMic plug fits, it will work, regardless of the brand of transmitter. All you need to do is select the right connector type.

### How many pins does my transmitter and/or microphone have?

If it has **4 pins** and is shaped like the below pictures, then you need to select a T4 MultiMic which suits all brands of T4 connectors including Fitness Audio, Shure, Chiayo, Mipro, Toa, JTS, EV, Telex and many more.

If it has **3 pins** and is shaped like the below picture, then you need to select a T3 MultiMic which suits all brands of T3 connectors including AKG, Samson, Redback, Okayo and many more.

Alternatively, if your brand of transmitter is an Audio Technica or a Sennheiser, then simply select this option in the drop-down box.
