HAT MEASURING GUIDE

We recommend that all our customers have their head size professionally measured in our London shop or take this measurement themselves at home. Do not simply order your Herbert Johnson hat in your usual size as we cannot guarantee the accuracy of other brands hat sizes.

- 1.** Place a flexible measuring tape or string around the widest part of your head so that it sits 1cm above the ear and across the mid-forehead, completely circling your head. The tape should be held firmly but not too tight.

- 2.** Measure your head where you want the hat to sit. For example, if you prefer to wear your hat on the back of your head, this is the measurement you need to take. Measure in centimetres and do not convert measurements.
- 3.** If your measurement falls between sizes, round up to the nearest half centimetre.
- 4.** Take photos from the front and side with the tape around your head and email them to us. This assists our hatter in checking that you are measuring correctly and also provides additional details that our hatter can use to best craft your hat to your features.

For best accuracy, do this in the mirror or with a friend to assist and repeat the measuring process several times. If you have any queries contact our hatter who will be happy to help.
