

World's leading wax technology for over a hundred years

Ski performance has been improved for hundreds of years. It began with natural materials like using tar. The Vauhti brand was established in the 1910s with its revolutionary Salaisuus (Secret) ski wax which at that time was a technological innovation to improve ski glide.

The development work that begun from Salaisuus wax laid the foundation for the Vauhti ski wax company that continues to be a pioneer in the industry.

The Vauhti products and the technology behind them is based on rigorous and long term testing in both laboratory and field conditions. The product development team has a passion to achieve complete knowledge and understanding of that thin layer between ski and snow where the ski's performance is optimized in all possible weather conditions. During its history Vauhti has discovered several innovations - the most recent is the raw materials used in Vauhti fluorocarbon free PURE collection. The company has succeeded in obtaining several patents and its products are used by the world's top skiers.

Finnish culture, the will to win, passion, perseverance, integrity, and the newest technology in the industry are the values that drive Vauhti products.

RESPONSIBILITY BASED ON TECHNOLOGY

Waxing should be easy so that one does not necessarily need separate waxing facilities.

Vauhti liquid products are developed with the same accuracy as the wax combinations used by the world's top skiers. With Vauhti you can enjoy cross country skiing and alpine skiing in forests mountains and fells.

A respect for man and nature is the basis for Vauhti. No one can ignore climate change and environmental issues anymore. By promoting sustainability in developing environmentally friendly products we can provide our children the opportunity to enjoy skiing in the years to come.

Vauhti products are manufactured for snow sports. It's important for us to bear our responsibility for our environmental and economic footprint. That is why Vauhti has compensated all carbon emissions contained in its production since 2015. Since 2020 Vauhti has also compensated all the carbon dioxide emissions caused by its production and travel.

The new Vauhti 360° products will move ski wax collection into an environmentally friendly direction where raw materials and packaging materials are coming from nature resources.

OUR HISTORY

1912

1930

1960

1990

Vauhti is originally established by Finnish Ski Champion Mr. Eetu Niska who invented Salaisuus wax at 1912 (Salaisuus means Secret in english).

The Legacy of Eetu Niska was maintained by Mr. Aulis Tolsa in 1930's. Aulis also had the passion for skiing and he developed the manufacturing process. The main ingredient was Tar and all the other essential components were gathered from the Finnish nature.

Cooperation between Vauhti and World's top skiers was the essential part of R&D late 1960's. All the famous names in Nordic countries participated to the product development by providing important information.

In 1991 Olympic medalist in X-country skiing Mr. Aki Karvonen acquired Vauhti after Mr. Tolsa's retirement. Karvonen's ultimate goal was to develop the best ski waxes in the world. He started the cooperation with VTT - The Technical Research Centre of Finland to modernize the product range. It became the Fundament of Vauhti Wax technology.

2010

2020

2014 was the year for next Century on the historical timeline of Vauhti. Our target is continuously develop ski wax technology and to take the business to next level. PhD. Esa Puukilainen was hired as Head of R&D to strengthen technological knowhow.

2015 Vauhti invested heavily into the production facilities at Joensuu factory. New automatized production for both liquid and solid glide waxes were installed.

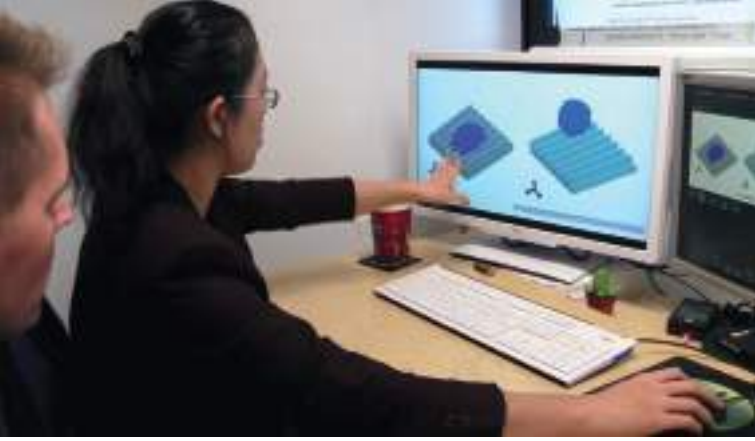

2016 Vauhti started joint research project with Nokian Tyres plc and University of Eastern Finland to guarantee the latest knowhow for product development and to drive innovations to next level. Skin Ski Cleaner and Skin Ski Care products were developed and launched. Patents were granted to these innovated two products later 2019.

2018 Second automatic liquid wax bottling unit was invested, which ensures daily production capacity up to 12.000 bottles.

2019 Vauhti's long-term and systematic product development to find new replacing raw materials for fluorocarbons successfully ended to patent application and launch of fluorocarbon free Pure Collection.

2020 Vauhti Sport & Medi hand sanitizer production starts to fight against COVID-19.

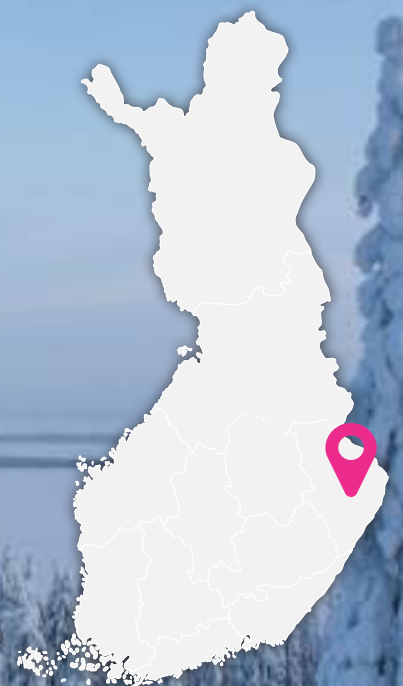

2021 Vauhti Launch environmental friendly and sustainable ski wax collection with innovative raw materials from nature. Vauhti's new 360° products will reform the ski wax market and move the product selection into a environmentally friendly direction where raw materials used are coming from nature

RESEARCH TOGETHER WITH THE UNIVERSITY OF EASTERN FINLAND GUARANTEES A COMPETITIVE ADVANTAGE TO THE WORLD'S OLDEST SKI WAX BRAND

Various materials and their behavior is a key factor in our daily lives. Material surface is typically made of polymers, the properties of which can be controlled and tailored to a wide range of different uses. Surface material performance is often critical to the functionality of the products and their physical and environmental safety. Vauhti Speed Oy engages in continuous research collaboration with the University to Eastern Finland, where the products can be tested in laboratory conditions and environment in order to find smallest factors to improve its characteristics and functionalities.

VAUHTI FACTORY IS LOCATED IN THE CITY OF JOENSUU EASTERN FINLAND WHERE LONG WINTER PROVIDE OPTIMAL TESTING SEASON

TECHNOLOGICAL KNOWHOW AND MODERN PRODUCTION FACILITIES GUARANTEE HIGH QUALITY

The strategic objective of Vauhti is to be a leading operator in the field of wax technology. Vauhti wax factory located in Joensuu Finland and it is the most modern ski wax factory in the world.

Modern equipment and technology will ensure the high quality of the products. Glide waxes and grip waxes are produced in automatic process, wherein each wax will possess optimized production parameters. The automation will monitor the manufacturing processes and casting temperatures of each product at a precision of one tenth of a

decimal place. The casting itself is taken care of by an automatic production robot. The process ensures that the resultant products from a production batch are identical, and prepared and casted exactly at the same temperature.

Vauhti's liquid waxes and products are also manufactured with the same precision. The products are prepared in four completely sealed digitally controlled production reactors, from where they are transferred to an two bottling line.

CARBON COMPENSATION

Vauhti Speed Oy compensates all the carbon contained in Vauhti's ski waxes produced in 2015 to 2019 after a change in ownership.

In 2020, Vauhti continues to annually compensate all the carbon dioxide emissions caused by its production and traveling. The carbon sequestration is provided by Evergreen Finland, who plants and protects forest in the middle and eastern parts of Finland, due to optimal growth conditions.

EVERGREEN
FINLAND

CARBON NEUTRAL

"I come from the mountains where nature and snow are an integral part of the living environment. That's why the Vauhti PURE products are not only my choice, but also nature's choice"

- Dorothea Wierer, Biathlon World Cup winner

PROUD PARTNERS OF VAUHTI

FLUOROCARBON FREE

PURE

A GROUNDBREAKING NEW FLUORINE-FREE SKI WAX FOR THE TOP OF THE WORLD

Vauhti's Pure collection is completely fluorine-free ski wax and care product line that covers product categories up to the race skiers. A cleaner and more responsible ski wax is Vauhti's answer to the needs and values of today's consumers.

The Pure collection is a result of long-term and systematic product development and it is based on completely new and fluorine-free additives. Zinc stearate, polydimethylsiloxane with aliphatic groups, and mixtures thereof improve the performance of hydrocarbon waxes and paraffins used in glide waxes in all snow conditions. Zinc stearate compacts and hardens the ski base, reduces the sliding friction and improves wear resistance, especially in cold and dry snow conditions. Polydimethylsiloxane with aliphatic groups improves the water repellency and the performance of the glide wax in both humid and wet snow conditions.

Chemical nature of the additives enables their processing and complete mixing with the hydrocarbon waxes and hydrocarbon solvents. The amount and ratio of additives as well as the type of wax raw materials can be optimized extensively according to the requirements of different snow types.

GLIDE WAXES

Glide waxes and grip waxes are produced in automatic process, where in each wax will possess optimized production parameters. The automation will monitor the manufacturing processes and casting temperatures of each product at a precision of one tenth of a decimal place. Waxes are based on ingredients from the highest level of chemical research. Modern equipment and technology will ensure the high quality of the products.

FLUOROCARBON FREE

PURE

PURE RACE OLD SNOW GLIDE WAXES

PURE RACE OLD SNOW glide waxes are processed with powder form raw materials and used as high performance coating powder. High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellence performance and good durability to the products in all weather conditions. Especially for old and artificial snow.

Anti-ice agent for crown & zero skis. Use always on new snow close to zero temperature.

341-LGGCZ GRIP & GLIDE FOR CROWN & ZERO SKIS

-2/-20°C | 20/-4°F

Grip & glide for crown & zero skis in cold snow.

MAINTENANCE AGENTS FOR SKIN SKIS

Vauhti Skin Ski products have been developed especially to clean and maintain skin skis. The present compositions do not comprise aliphatic and aromatic hydrocarbon solvents as their presence even in small amounts could lead to detachment of the skin strip from the base of the ski. Regular maintenance of the skin strips guarantees the performance and extends the lifetime of the skis. Patents have been granted for both Skin Cleaner (F1127921B) and Skin Care (F1128011B) products.

341-QSC / 341-QSC200 SKIN SKI CLEANER

Unique composition for cleaning skin strips of skin skis from any build-up dirt such as grip waxes from the ski track during ski use.

341-SSCR80 SKIN SKI CARE RED

+10/-5°C | 50/23°

For wet and dirty snow, also damp snow to zero degrees. It reduces build-up of impurities from the ski tracks to skin strips, and prevents the risk of icing of skin strips, thus maintaining and improving both grip and glide of the skin skis.

341-SSCB80 SKIN SKI CARE BLUE

-2/-20°C | 28/-4°F

For all snow types on cold conditions. It improves the glide on cold and dry snow.

341-SSCC80 SKIN SKI CLEAN & CARE

For cleaning and maintenance of the skin strip of the skin skis.

SKI WAX FROM NATURE

360°

FROM NATURE TO NATURE

Core philosophy of Vauhti is to respect people and nature. No one can close their eyes to climate change or environmental threats anymore. Vauhti want to promote sustainability by developing environmentally friendly products, so that also our children have opportunity to enjoy skiing. Vauhti took decision to compensate all carbon contained in ski waxes produced since 2015. From year 2020, vauhti continues to compensate all the carbon dioxide emissions caused by its production and traveling.

Development work of new vauhti 360 series is based on our two fundamental pillars:

- (1) Passion to create innovative and functional ski waxes and
- (2) Respect of nature and sustainable values.

Majority of the raw materials used in the products are from natural recourses. We did not want to focus development work only to raw materials of waxes and therefore we put ourselves an ambitious goal that also the packaging materials of the 360 series are from natural resources. We managed to achieve more than 90% of the composition of the final product from natural based materials.

360°-Bottles are made of bioplastic instead of petroleum-based plastics. Sugarcane-based plastic is used in the bottles. Solid paraffins are packed in recycled cardboard and kits in linen bags. Ingredients to waxes and maintenance products are coming from vegetal resources. We use rice, corn and sugarcane based waxes and our solvent is bio-ethanol.

Environmental footprint of natural based materials is lower than petroleum-based since while growing those capture CO₂. Those are renewable since they regenerate quickly.

We hope that vauhti's new environmentally friendly 360 product range will offer the skier unique emotional experiences in nature on ski tracks, slopes, and mountains. Pure nature is full of joy. Let us nurture and respect it so it also gives us its share now and in the future.

Naturally from nature to nature!

360° GLIDE WAXES

60g | 2.1oz

51100-360C60
360° COLD GLIDE WAX
