TECHNOLOGICAL INNOVATIONS

GLIDE WAX COLLECTION

The Rex N-Kinetic³ glide wax collection offers an option for every weather condition and every price range. The latest additions include innovative coatings of the NFX series and also the extremely durable long-distance SISU powders and SISU wax.

THE REX ADVANTAGE

What makes glide waxes extremely fast, durable, and easy to use? Explore the secrets of Rex ski wax technology.

Rex POWER POLYMERS™ is a new generation polymer wax blend that forms a strong bond with the UHMWPE base material used in race skis, ensuring good durability.

Rex UHW™ is an ultra-hard polymer wax blend for the most abrasive conditions. It is only possible to apply in liquid or powder form. The polymer forms a strong bond with the UHMWPE base material used in race skis, ensuring good durability. It is utilized in all Pink/Green waxes, in Glide Cleaner, and in SISU powders.

Rex N-KINETIC™ is the name of our fluorocarbon free dirt-repelling and glide-enhancing technologies. N-KINETIC™ is constantly evolving, and already at its third generation. This is what makes our glide waxes so darn fast.

The core of our liquid wax technology. Advanced 2-STEP CARRIER™ is a solvent and an unique manufacturing process that enables the temporary liquid state transformation of new-generation polymer waxes — a liquid wax without compromises.

The latest nanotechnology that elevates the performance of our NFX line-up to a new level. It forms a low surface energy nano matrix coating on the ski base, providing exceptional glide and durability.

NFX TOP COATINGS AND GLIDERS

Uncompromising performance and cutting-edge nanotechnology. A completely new range of fluor-free race waxes for World Cup tracks. For 25/26, the new NFX Ultra Tuned liquids complete the series.

NFX TOP COATINGS

WORLD CUP WINNING POWDERS AND BLOCKS WITH ADVANCED ADDITIVE TECHNOLOGY

The brand new NFX N-Kinetic powders and blocks set a new benchmark for racing top coatings of the post-fluor era. In addition to the N-Kinetic³ additives, the powders also contain specific NANO-TK nanoparticles that elevate their performance and durability to a new level.

NFX 11 #4705 +10...-5°C

Glide powder for wet conditions to mild frost. From mixed to old snow. Based on a NF-level micronized Rex Power Polymer wax blend, with added extra N-Kinetic³ nanoparticles that are embedded in the surrounding powder matrix. Developed especially for wet and moist snow.

NFX 21 #4706 -2...-10°C

Glide powder for all snow types in mild freeze. King of the legendary Rex Blue range of glide waxes. Based on a NF-level micronized Rex Power Polymers wax blend, with added extra N-Kinetic³ nanoparticles embedded in the surrounding powder matrix. The mixture is developed especially for new and mixed snow and snow with relatively high humidity.

NFX 21G #4707 +3...-8°C

The unique mixture of NFX 21g is developed especially for new and mixed snow and snow with relatively high humidity. Based on an NF-level micronized Rex Power Polymers, with added extra N-Kinetic³ nanoparticles that are embedded in the surrounding powder matrix. In addition to the standard new snow additives used in NF 21g, the NFX 21g adds additional nanoparticles for an extra performance boost on new snow.

NFX 41 #4708 +10...-20°C | UHW

A glide powder for old, coarse, and artificial snow in all temperatures. It contains Rex UHW-Ultra Hard Waxes, which glides exceptionally well on coarse slush and slow, squeaky snow. Based on an NF-level micronized UHW wax blend, with added extra N-Kinetic³ nanoparticles that are embedded in the surrounding powder matrix. The additive mix on this powder is specially designed to boost performance on wet and moist snow.

NFX SISU WHITE #4712 ALL TEMPERATURES ALL SNOW TYPES BEST FOR TRANSFORMED SNOW

Durable long-distance UHW race powder. Use as the final layer or as an underlayer. It contains Rex UHW -Ultra Hard Waxes that give the powder extra durability. This ultra-hard and durable wax blend can now be applied with a waxing iron, thanks to the powder form.

NFX SISU BLACK #4711 ALL TEMPERATURES ALL SNOW TYPES BEST FOR NEW SNOW

A durable long-distance UHW race powder for NEW snow. Use as the top coat or as an underlayer. It contains Rex Ultra Hard Waxes that give powder extra durability. Based on an NF-level micronized Rex Power Polymers wax blend, added extra N-Kinetic³ nanoparticles are embedded in the surrounding powder matrix. The unique mixture of SISU Black is developed especially for new, cold fine-grained and mixed snow and snow with relatively high humidity.

NFX BLOCKS

NFX blocks offer the advanced nano matrix technology of NFX powders in an economical and easy-to-use compressed powder block form. Rub the block onto the ski base, heat it with an iron, cork it, felt it, or use a roto brush. Or make "block porridge" with NF liquid gliders.

NFX GOLD #4715 +5...-5°C

N-Kinetic³ glide block for wet conditions. Used for coating glide wax. NFX Gold is the softest version of the block series. A golden block for mild weather, enhancing glide with the latest nanotechnology.

NFX BLUE #4716 -1...-10°C

N-Kinetic³ glide block for cold weather on all snow types. Used for a top coat. Based on NFX21 powder, this block offers super glide in an easy-to-use block.

NFX NEW SNOW #4717 +3...-8°C

N-Kinetic³ glide block for new snow. It is best used as a top coat over the NF21G block or liquid. This block version is based on the NFX21G powder, utilizing completely new additive technology.

NFX OLD SNOW #4718 +5...-20°C

N-Kinetic³ glide block for old snow is specially designed for coarse or icy snow. This block version contains UHW wax from the NFX41 powder. Used as a top coating for glide waxes.

OLOS #4710 FINISHING POWDER

Cold rub-on N-Kinetic³ powder is used to finish glide surfaces. Enhances glide and sensitivity, especially in transformed cold snow.

Sprinkle onto the ski base, then apply with cork, felt, or roto tool. It is not to be applied with waxing iron.

NFX EXTRA TUNED

EXTRA TUNED GLIDERS WITH OPTIMAL POWDER MIXES

The brand new NFX Extra Tuned gliders are based on an evolutionary version of our NF-series liquid gliders. This is further boosted with an optimal mix of condition-specific NFX powder and our unique OLOS cold application finishing powder for an extra touch. With NFX liquid gliders, the advanced NANO-TK additives can now be applied in liquid form. An extraordinarily great way of achieving a complicated World Cup-level waxing by using only one product!

"Despite being a 'shortcut' to World Cup-level waxing, these products are also used in high-level competitions. In many races, we have found that they enhance the performance of NFX powders as a final coating layer."

Juuso Liukkonen – CTO

{ NANO-TK™ EXPLAINED }

Rex is using advanced nanomatrix technology to boost the performance of NFX-series products. A nano matrix is a conceptual or actual arrangement of materials or an optimal amount of condition-specific particles at the nanoscale, typically structured in a grid or network-like pattern. At this scale, materials can exhibit unique physical, chemical, and electrical properties not seen in bulk forms.

With Rex NFX powders, the particles are homogenized with the surrounding powder matrix, which also acts as a carrier for applying the nano matrix onto the ski base.

The result is an ultra-low friction coating with minimal surface energy.

CONTAINS

NFX BLUE

-2...-12°C

Based on an evolution version of NF21 Blue wax. Tuned with an optimal amount of NFX21 powder, with added OLOS finishing powder in the mix for minimal surface energy and ultra-fast glide. Advanced nano matrix technology is available in an easily applicable sponge bottle. It can be used as a finishing layer on top of NF waxes or as the only waxing on top of Glide Cleaner.

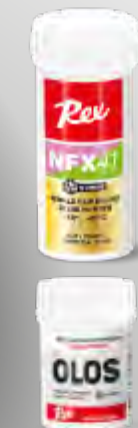

CONTAINS

NFX BLACK

+5...-10°C

Based on an evolution version of NF21g New Snow wax. Tuned with an optimal amount of NFX21g powder for even better performance on new snow. Added OLOS finishing powder for minimal surface energy and ultra-fast glide. Advanced nano matrix technology in an easily applicable sponge bottle. It can be used as a finishing layer on top of NF waxes or as the only waxing on top of Glide Cleaner.

CONTAINS

NFX PINK

+5...-20°C

Based on an evolution version of NF41 Pink/Green UHW wax. Tuned with NFX41 powder for even better performance on dirty and coarse snow. Added OLOS finishing powder for minimal surface energy and ultra-fast glide. Advanced nano matrix technology is available in an easily applicable sponge bottle. It can be used as a finishing layer on top of NF waxes or as the only waxing on top of Glide Cleaner.

NEW! ADVANCED NANOMATRIX TECHNOLOGY

NF GLIDERS

WORLD CUP RACING GLIDERS WITH THIRD-GENERATION N-KINETIC TECHNOLOGY!

Rex NF-series introduces the latest generation of our N-Kinetic™ fluor-free glide technology. Most wax-containing liquid gliders on the market are faster drying and make your skis slippery. The third-generation N-Kinetic glide technology has proven successful in the XC Ski World Cup, where top national teams have used it in competition. The NF series is available in solid and liquid versions in several package sizes. With one 150ml spray wax, you can wax up to 35 pairs of skis, and the sponge bottle lasts even longer!

{ PRO-TIP }

In World Cup racing, NF Liquid gliders have also been used as top coating liquids on top of powders or block waxes.

NF11 YELLOW

+10...-2°C

New and old snow. The softest wax in the NF series is available in liquid spray form and as a traditional block form. However, unlike conventional wet condition waxes, NF11 is relatively hard and considered a "dry" wax.

NF21 BLUE

-2...-8/-12°C

For all snow types. NF21 is our all-time fastest fluor-free wax, developed for mild to medium frosts. It is hard as a block but still easy to melt. Developed primarily as an underlayer for top coatings, it has also proven to work exceptionally well as a final layer.

NF21G BLACK

+2...-12°C

For new snow. Contains a precisely optimized amount of graphite. The wax hardness is positioned between NF11 Yellow and NF21 Blue for new snow containing a precisely optimized amount of graphite.

NF31 GREEN

-8...-20°C

NF31 is a hard and durable wax for cold conditions on all types of snow. It can also be used in warmer weather when the snow is abrasive or artificial.

NF41 PINK/GREEN

+5...-20°C

For slushy, coarse, or artificial snow. NF41 is a revolutionary diamond-hard glide wax that defies the limitations of hot waxing! With its extremely hard UHW polymer wax blends take the durability of liquid glide waxes to a whole new level. Achieve top-notch gliding performance on wet, coarse, and artificial snow. It's a long-lasting and easy-to-apply choice for alpine skis and snowboards!

NF SISU GLIDERS

TOUGH, RESILIENT AND DURABLE, WITH A WIDE OPERATING RANGE

Our SISU products are excellent for race ski base preparation or as a wide-range, long-distance wax for marathon skiers and enthusiasts. Tough and durable, but still easy to apply in block form. The perfect underlayer for any race day waxing. The wax composition brings the advanced tech from NF-series to a more economical price point. Think of them as the LF range of the post-fluor era.

NF SISU RACING BASE GLIDER WHITE

ALL TEMPERATURES

The cornerstone of race ski preparation! A tough and durable wax for long distances and as a base layer for race waxing, particularly suitable as an underlayer for NFX powders in all conditions. Ideal for prepping new skis or freshly stone-ground skis, the SISU Racing Base Glider features a Rex Power Polymers wax composition with third-generation N-Kinetic™ additives, making it an excellent all-condition training wax.

#4714 2x40 g Package
#4725 60 ml Sponge

NF SISU RACING BASE GLIDER HARD BLACK

ALL TEMPERATURES

A hard and durable base wax for preparing new and stone-ground skis alongside Sisu White. It forms a hard, wear-resistant surface that works independently or as a base for NFX powders, especially in cold, new snow conditions. It also excels in coarse and abrasive conditions.

#4724 2x40 g Package
#4726 60 ml Sponge

{ THE CONCEPT OF SISU }

"Sisu" is a Finnish concept and cultural construct often described as stoic determination, tenacity of purpose, grit, bravery, resilience, and hardiness. It expresses the Finnish national character, denoting inner strength and perseverance in the face of adversity, often in situations where success seems unlikely. Sisu is about acting against the odds, displaying courage, and resolving challenges. It's not just about physical toughness but also mental fortitude and the will to overcome obstacles. The concept of sisu has profound significance in Finnish culture and is a source of pride and identity.

NEW!

GLIDE CLEANER SISU UHW

The cornerstone of liquid glide waxing!

Based on the same N-Kinetic generation three technology as our top-of-the-line NF Gliders. It also shares the UHW Ultra Hard wax in our Pink/Green gliders. Cleanses the base very effectively and leaves a thin and ultra-hard layer of wax that works as a binder for subsequent wax layers and glides well on its own on artificial snow. Glide Cleaner can quickly clean your skis after every ski session. Your skis will remain extremely fast with minimal effort. It also works as a glide wax, especially in dirty artificial snow. A wax recipe akin to NF Sisu Racing Base Wax improves the new SISU version.

#5142 Glide Cleaner Sisu | Sponge 60 ML
#514 Glide Cleaner Sisu | 170 ML
#5141 Glide Cleaner Sisu | 500 ML

G GLIDERS

DURABLE, RACING LEVEL LIQUID GLIDERS AT AN EXCELLENT PRICE POINT

G-series sprays and sponge applicator waxes are fluor-free and feature glide-enhancing technology for fast training and racing. Similar to NF Sprays, they are the most wax-rich liquid gliders on the market and do not require hot waxing to maintain durability. They fill minor imperfections in the base material like hot wax.

N-KINETIC

POWER POLYMERS

2-STEP CARRIER

G11 YELLOW

+2/+10...-2°C

The softest wax in the G-series performs best in mild weather. It is an easy-to-apply racing wax for warmer, wet conditions.

#436 G11 Yellow | Spray 150 ml
#4361 G11 Yellow | Sponge 60 ml

G21 BLUE

-2...-12°C

G21 Blue provides exceptional glide in low-humidity cold weather conditions. The standard many others compare themselves to. High wax content in G21 Blue ensures long-lasting durability.

437 G21 Blue | Spray 150 ml
4371 G21 Blue | Sponge 60 ml

G21G BLACK

+2...-12°C

Designed for fresh snow, G21G contains carefully optimized amounts of graphite. Its hardness falls between G11 yellow and G21 blue waxes.

#439 G21G Black | Spray 150 ml
#4391 G21G Black | Sponge 60 ml

G41 PINK/GREEN

+5...-20°C

It is an extremely hard and wear-resistant glide wax that offers top-level performance in cold, artificial snow and coarse, wet, and icy crust snow. Rex 2-Step Carrier™ solvent technology enables the application of UHW™ ultra-hard glide wax without an iron or scraping. It is great for alpine skis and snowboards!

#435 G41 Pink/Green | Spray 150 ml
#4351 G41 Pink/Green | Sponge 60 ml

ORIGINAL GLIDERS

A LEGENDARY LINE-UP OF SKI WAX CLASSICS

The Original Rex Glider line features non-fluorinated waxes highly regarded by recreational skiers and elite racers alike, making it a reliable choice for all skill levels. The most popular versions are also available in liquid form. The new-generation POWER POLYMERS™ wax blend delivers performance comparable to past racing waxes, utilizing our latest 2-Step Carrier™ liquid technology for high wax content and improved abrasion resistance.

POWER
POLYMERS

ORIGINAL

ORIGINAL GREEN #424

-8...-20°C | BLOCK 86 G

This is a reliable wax for colder temperatures and conditions where a hard wax is needed, e.g., icy tracks or dirty snow.

BLUE SPECIAL #4221

SERVICE WAX | 1 KG

Light Blue Special is an easily workable service wax for all skis and snowboards. It penetrates the base and leaves a shiny surface — slightly softer than #423 Blue. Easy to apply, easy to scrape, but still up to the task for spirited skiing. The package contains ten 100 gram blocks.

ORIGINAL BLUE

-2...-15°C / -1...-10°C

The king of glide waxes! Legendary Rex Blue is one of the best NF gliders in the world — the number-one choice for base waxing, training, and racing. Often the best solution for a recreational skier.

ORIGINAL PURPLE

+5...-2°C / +2...-4°C

A popular glide wax works from freezing to mild frosts, especially in wet snow. Also available in 60ml sponge bottle.

ORIGINAL BLACK #433

-7...-25°C | BLOCK 86 G

A special glider designed specifically for low humidity and cold temperatures.

BASE PREPARATION PARAFFIN #491

BLOCK 86 G

A traditional, easy-to-melt and deep-penetrating wax. It is designed to prepare new skis. Creates a good surface for further waxing.

#423 Original Blue | Block 86 g
#4231 Original Blue | 600g
#4232 Original Blue | Sponge 60 ml

#425 Original Purple | Block 86 g
#4252 Original Purple | Sponge 60 ml

ORIGINAL GRIP WAXES

A SERIES OF CLASSICS, RECOGNIZED WORLDWIDE BY SKIERS IN THE KNOW.

REXIN SININEN
SINCE 1952
ORIGINAL REX BLUE

BLUE SPECIAL #120

-1...-4°C

Another Rex legend. It is slightly softer and has more grip than Blue #115 for milder frosts. It provides a good grip even on abrasive tracks.

LIGHT GREEN #105

-8...-15°C

For cold conditions. On new snow provides a good grip at around -6°C. Use it in race waxing as a coating for softer waxes.

UNIVERSAL TAR #141

-1...-25°C

One of our most recognized grip waxes, it is a good choice for skiers looking for simplicity in their waxing. Despite its Universal name, it is a fully proven race wax, especially at mild frosts (-1...-8°C).

RED #131

+1...-1°C

Red kick wax is for zero conditions. When mixed or used as a cover for klusters, it protects against icing on new or granulated snow.

BASE WAX #190

It is a very sticky and durable base wax. A new and upgraded formula makes it easier to apply. Also suitable for adding mid-layers.

PURPLE AND PURPLE LIQUID

+2...-2°C / 0...-2°C

Despite its purple color, this wax is designed for below-freezing temperatures. It is a safe choice for recreational skiers. Available also in 60ml sponge bottle.

#122 Purple | Can

#315 Purple | Sponge 60 ml

BLUE AND BLUE LIQUID

-2...-15°C / -2...-8°C

The king of grip waxes! Widely used as a universal grip wax in cold temperatures, it can be adjusted in terms of grip and glide properties by the thickness of the wax layer. The colder the weather, the thinner the layer.

#115 Blue | Can

#314 Blue | Sponge 60 ml

POWERGRIP

DURABLE, ELASTIC AND GRIPPY WAX SERIES THAT MANY SKIERS SWEAR BY WHEN THE TRACKS ARE HARD.

BLUE #61

-4...-10°C

It is one of the best universal grip waxes on the market. It is extremely durable for all icy and old snow conditions.

PURPLE #41

+3...-5°C

It is for icy, coarse, and extremely hard tracks. It can be used instead of klusters in temperatures around the freezing point. Apply a thin layer for new and falling snow.

GREEN #81

-8...-20°C

The king of PowerGrip waxes! A universal grip wax for cold conditions. It has the same properties as on PowerGrip Blue, but for colder temperatures. Also excellent base wax for racing.

RACING SERVICE GRIP WAXES

A SERIES OF WORLD CUP WAX CABIN FAVOURITES, WITH THREE NEW ADDITIONS FOR A COMPLETE HIGH PERFORMANCE LINE-UP

Racing Service grip waxes have been highly successful at the highest levels of ski racing and as everyday waxes for recreational skiers. Specialized waxes for new and old snow have been further developed into nearly universal mixed-snow waxes, offering an aggressive kick and superior glide properties.

GOLD #33

+2...-2°C MOIST SNOW

Gold grip wax is the link between grip waxes and klister. Used in zero conditions.

KICK WAX EVOLUTION

Grip waxing was initially taught to me as a process of applying a soft wax layer and covering it with a harder kick wax to match the snow conditions.

In 2010, I began testing new waxing techniques with Stein-Olav Sniesrud, who later became the head technician for Team Norway.

Together, we found that reversing this method — using a hard grip wax as the base and covering it with a softer wax—yielded excellent results.

This required a different approach to the cover wax, leading to the development of R&D waxes that eventually became our Racing Service line: TK-1814 and 30G.

Based on this philosophy, we designed three new grip waxes to complete the Rex Racing Service line: Gold, Blue, and Green.

- Juuso Liukkonen, CTO

30G #31

+1...-8°C NEW SNOW

An exceptional grip for fresh snow, providing excellent glide and grip. In cold weather, it's used as a cover for other hard waxes, and in zero conditions, it's applied as a cover over base wax or mixed with klister.

30GB #32

+1...-8°C MIXED SNOW

It is at its best when new snow mixes with old snow and is also effective in transforming snow. It is based on the successful 30G and enhanced with additives used in Rex's new snow special waxes, which increase glide sensitivity and reduce the risk of freezing. In cold weather, it's used as a cover with other grip waxes, and in zero conditions, it's applied as a cover for base wax klister.

TK-1814 #184

-2...-15°C ARTIFICIAL SNOW

Its best performance is in packed or groomed snow or hard-packed transformed snow conditions. It can grip while maintaining release and smoothness in both kick and glide. TK-1814 can be used as a cover over base wax or klister as well as a coating over grip and klister.

BLUE #34

-1...-8°C MIXED SNOW

Final layer grip wax to give that solid grip and fast glide. Works on a wide temperature range.

GREEN #35

-8...-20°C MIXED SNOW

Grip wax for cold conditions. Secure grip with properties to overcome cold snow friction.

KLISTER GRIP WAXES

KLISTERS AND LIQUID KLISTERS

The reliability of Rex klisters is well known among competitive as well as recreational skiers. The special Racing Service versions are World Cup Wax Technician's favorites! Use klister when the tracks are icy, coarse or wet.

TK-2251 #2251
+10...-0°C

This is a special klister for use in wet and coarse snow. It can also be the final layer to ensure a powerful grip.

GOLD MOLYBDENUM #2162
+4...-5°C

Based on Gold Klister, this new molybdenum Racing Service version is excellent on dirty and coarse snow. It is a bit softer for extra grip, and on old and coarse snow, the added molybdenum improves its glide properties and decreases the attachment of dirt.

BLUE #200

-5...-30°C

It is famous for its durability on icy and hard tracks. It can be used as a base wax for other klisters and grip waxes in abrasive conditions.

PURPLE #205

+10...-7°C

A durable klister for a wide temperature range, it's suitable for coarse wet snow and coarse icy snow and is a good base layer for other klisters.

UNIVERSAL #240

+10°...-30°C

Despite its Universal name it is widely used in races, too. It is a great all-around klister that can be used as an additive to other klisters for enhanced grip.

RED SPECIAL #210

+10...-0°C

For wet and falling snow conditions. The formula provides durability and wear resistance without compromising grip properties in extremely wet conditions.

GOLD AND GOLD LIQUID

+3...-7°C

For coarse snow, artificial snow, and glazed tracks, +3-7°C. This is one of Rex's most popular klisters. It works great on skis with a low wax chamber, while normal klisters are best suited for a higher wax chamber. You can apply liquid klister while skiing; no drying time is required!

BASE KLISTER AND BASE KLISTER LIQUID

A binder for klisters and grip waxes, it has excellent adhesion and increases waxing wear resistance. The base klister is where our new liquid klister concept shines. It is the World Cup Wax Technicians' favorite base klister! It works great as a base for all grip waxes, not just klisters.

#216 Gold Klister
#2161 Gold Klister | Sponge 60 ml

#290 Base Klister
#2901 Base Klister Liquid | Sponge 60 ml

SKI CARE & REMOVERS

Rex cleanses, replenishes and protects your precious skiing equipment. Optimal choices for every type of ski.

WAX REMOVER

An effective wax remover. It is especially suitable for removing grip wax and klister. It also efficiently cleans Nanogrip and Zero bases.

- #501 Wax Remover | 170 ml
- #502 Wax Remover | 500 ml
- #510 Wax Remover | spray 170 ml

SKIN CLEANER

Effective cleaner for all skin skis. Safe for all manufacturers' mohair inserts. Hydrocarbon-free, it does not weaken the insert's glue. After treatment, apply Rex Skin Care spray to increase the grip zone's glide properties and dirt repellency.

- #512 Skin Cleaner | 170 ml
- #5122 Skin Cleaner | 60 ml

SKIN CARE N-KINETIC

It is a glide-enhancing and dirt-repelling conditioning agent for mohair inserts. It does not contain hydrocarbons or harm the mohair grip insert.

- #508 Skin Care | 85 ml
- #5081 Skin Care | 60 ml

ANTI-ICE N-KINETIC

Anti-Ice for Nanogrip and other no-wax bases. Prevents icing and improves glide.

Use: Spread on the whole length of Nanogrip ski base. Apply on grip zone on Zero-skis. Let dry for 5 minutes.

- #507 Anti Ice | 60 ml

CLEANING AND CARE KITS

Rex Skin Ski Care sets contain everything you need to keep your skin skis in top condition. An essential buy for any skin ski user.

WAX RECOMMENDATIONS

TIPS FOR COMPETITIVE AND CITIZEN SKIERS BY OUR RACING SERVICE TEAM.

The indicated temperatures are air temperatures. When specifying the snow type for a specific day, consider that machine-groomed new snow often equals old snow, and even several days old fresh snow can still be regarded as fresh snow, especially when it's cold.

Always clean the glide surfaces before applying new wax with Rex Glide Cleaner, a cleaning and maintenance agent that also serves as a base wax.

ROTO BRUSHES

SUPERB SELECTION OF HIGH-QUALITY ROTO BRUSHES

Carefully crafted tools for professional waxing and race-level finishing. Developed in collaboration with Rex Racing Service professionals.

ROTO HANDLE KIT WITH DUAL AXLES AND SHIELD #6292

At the core of roto brushing is the Rex roto handle, which comes with quick- swap 100mm and 140mm axles out of the box. Switching between brushes is quick and easy, because the brush can be swapped without removing the axle from the drill. Compatible with all brushes that use 100mm diameter hexagonal axles.

We recommend using a device with a minimum rotation speed of approximately 1500 RPM. Quick-release shield makes the handle also compatible with large merino rollers. Built with oversized industrial bearings for heavy duty use.

NYLON SEMI HARD 100 MM #6232

This is a general-purpose nylon brush. The bristles' thickness and length have been carefully designed to support the attachment of liquid gliders. Always finish glide waxing using a nylon brush. It is also suitable for finishing top coatings.

ROTO CORK 100MM #6112

It is used on solid and liquid glide coatings and powders without a waxing iron, producing pro-level glide waxing while minimizing waxing waste.

ROTO SOFT NYLON / HORSE HAIR 140MM #6233

The only brush you need for working with solid or liquid glide waxes. Start brushing hard waxes with a horsehair brush and finish with the nylon brush.

ROTO BRUSH STEEL + HORSEHAIR 140MM #6235

The king of roto brushes! A very high-quality and fine stainless steel brush combined with natural hair is the most used brush in Rex's Racing Service. The fine stainless steel is efficient and safe when working with hard waxes and powders.

The perfect tool for the professional for working with hard waxes and powders.

ROTO FELT 100MM #6272

Liquid gliders and top coats are finished by applying the liquid glide wax to the base and letting it dry for about 10 minutes. Then, finish and polish using a felt roto brush, overlapping motions from tip to tail.

HORSE HAIR 100MM #6242

After scraping, the Horsehair quickly opens up the base structure.

ROTO SOFT NYLON / CORK 140MM #6234

A two-in-one tool for applying and finishing glide waxes and top coatings. Use the cork for application, and finish with the nylon brush.

ROTO MERINO THICK AND FLUFFY 100MM #6282

This is used to apply hard glide waxes without a waxing iron. First, apply wax to the wool or rub a layer onto the ski base, then lightly press the roto wool against the base. This method is used in race waxing to apply powder and liquid coatings.

HAND BRUSHES

WITH GOOD EQUIPMENT, WAXING IS FUN

Made in Europe, and designed with a team of waxing industry professionals. Every detail of each brush is designed according to the requirements of professional users. Using the right brush for the right situation ensures maximum performance from your skis!

NYLON BRUSH, SOFT #623

A brush for all types of waxes. Blue fine bristles are primarily intended for finishing work polishing.

HORSEHAIR BRUSH #624

After scraping off hot wax, a horsehair brush opens up the base structure. Like a brass brush, a horsehair brush is also more abrasive than a nylon brush.

NYLON BRUSH, SEMI-HARD #622

Essential equipment for every waxer. Always finish glide waxing by brushing with a nylon brush. Remember to switch to a new brush when transitioning to fluor-free waxes.

NYLON BRUSH, SMALL 54X86MM #6221

Essential equipment for every waxer. The smaller size fits in the palm of your hand and is easy to pack when traveling.

BRASS BRUSH, FINE #632

After scraping hard glide wax, use it to open the base structure. A few strokes from tip to tail are sufficient. It is also suitable for cleaning glide surfaces with or without wax remover.

STAINLESS STEEL BRUSH #631

Stainless steel brushes are used to open up the base structure during waxing. Stainless steel is the most effective at removing wax. Blue nylon hairs add a more complete finish.

YELLOW ELITE

-2...+10°C WARM CONDITIONS

This is a windproof and highly breathable technical racing glove for mild weather conditions. It is designed for a tight grip and made with breathable Revolution Lycra material. It features silicone prints on the palm, an adjustable wrist closure, and a touchscreen-compatible index finger.

SIZES: XS | S | M | L | XL | XXL
#812-817

BLUE ELITE

-2...-8°C MILD CONDITIONS

A windproof and highly breathable technical glove for slightly cold weather. Designed for a snug grip. Made with recycled premium softshell material. It features silicone prints on the palm, adjustable wrist closure, and touchscreen compatible index finger

SIZES: XS | S | M | L | XL | XXL
#842-847

GREEN ELITE

-8...-20°C COLD CONDITIONS

The warmest glove in the series, windproof and highly breathable, is designed for colder weather. It fits snugly for a firm grip and is made with recycled premium softshell material. It features silicone prints on the palm, adjustable wrist closure, and a touchscreen-compatible index finger.

SIZES: XS | S | M | L | XL | XXL
#882-887

YELLOW

-2...+10°C

The basic model of the yellow glove with a simple wrist closure. Same fit as the Elite model. Windproof and breathable material.

SIZES: XS | S | M | L | XL | XXL
#802-807

BLUE

-2...-8°C

The basic model of the blue glove with a simple wrist closure. Same fit as the Elite model. Windproof and breathable material.

SIZES: XS | S | M | L | XL | XXL
#822-827

GREEN LOBSTER

-8...-20°C

This is an extremely popular and warm two-finger mitten for the coldest weather. ThermFOAM insulation, in addition to Thinsulate, provides warmth while allowing breathability. Highly contoured fit.

SIZES: XS | S | M | L | XL | XXL
#852-857

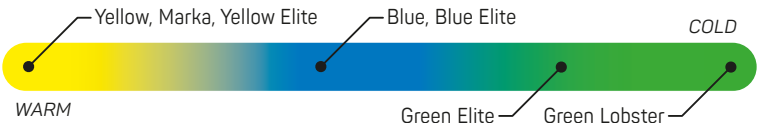

MARKA MULTISPORT

Affordable yet high-quality glove for all activities. Excellent fit and durable materials.

SIZES: XS | S | M | L | XL | XXL
#772-777

FIRM GRIP ON PERFORMANCE

Our line-up offers three warmth categories in two performance levels. Choose the technical Elite model with performance fabrics and modern features or the standard model with great value.

130-165 cm / 5 cm

ACTIVE / CASUAL
SPARK

50% CARBON SHAFT PRO FIT STRAP

Have you suddenly developed an interest in skiing? First year junior skier? Rex Spark is an excellent price-to-performance ratio pole with a 50% carbon shaft, carbon cork grip, and Pro Fit strap. It is available in 135 - 175 cm lengths in 5 cm increments.

#34130-#34160
130-160 cm / 5 cm

CASUAL
VENTUS

30% CARBON SHAFT SPORT STRAP

The Ventus pole offers excellent value for money with a 30% carbon fiber shaft, half-cork grip, and a sports strap. Available in lengths from 130 to 160 cm in 5 cm increments. The Ventus won't blow your budget but provides a great skiing experience.

POLE ACCESSORIES

Quickly interchangeable baskets based on Change-It system and easily replaceable straps allow you to update your poles to match the prevailing conditions in a matter of minutes.

CLICK-IT SYSTEM

The new Click-it system brings speed and comfort to competitive skiers as well as active skiers.

The strap and grip combination of the Click-it system is 18% lighter compared to the Rex Pro Carbon grip and Pro 360 Fit strap combination.

The fit of the new Click-it strap is so good that you won't even notice it's on your hand when the strap is detached from the grip.

REX ACCESSORIES

FOR TRUE REXPERTS! PRACTICAL AND HIGH-QUALITY REX ACCESSORIES LOOK AWESOME AND OFFER EXCEPTIONAL VALUE!

HYDRATION WAIST BAG

PREMIUM THERMO

The top zippered compartment of the waist bag easily fits essentials like your phone, keys, and other necessary items you need on your skiing trip. The hydration bottle is insulated and removable for cleaning.

#7971

SKI BOOT COVERS

SIZES: 37-46

Ski boot thermal covers with a warm pile lining. This cover features a velcro closure and sidewall reinforcements.

#7637-#7645

RACING SERVICE APRON

The waxing apron used by racing teams "Rexperts", equipped with multiple pockets and keeps clothes protected even with the most enthusiastic waxing moves.

#755

SKI BAG

Stylish ski bag made of durable nylon. Fits in 5 pairs of XC skis.

#7972

MOBILE WAXING STAND

Lightweight and compact waxing stand that doubles as a accessory bag. It can be attached to any table that is wide enough. Suitable for all ski lengths.

#748

WAXING IRON

EU 220V / 1200W, USA 110V / 800W

Powerful waxing iron, designed to meet professional demands. Thick base that keeps the heat steady. The dimpled base with wax pockets prevents direct contact against the ski base.

#7471 EU 220V / 1200W

#7472 USA 110V / 800W

REX ACCESSORIES

COMPREHENSIVE WAXING TOOLS

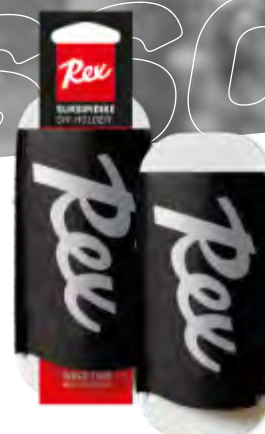

FIBER TOWEL #629

Fiber towel 30 m (13x60 cm). Versatile cloth for ski waxing and cleaning. Excellent when using Glide Cleaner and Skin Cleaner. Lint-free product. Grip waxes can be absorbed into the fiber cloth using a waxing iron, making it easy to remove the majority of grip wax and the cloth by pushing with a scraper.

SKI HOLDER #7391

Popular plastic ski/pole holder. Convenient holder for efficiently transporting skis and poles together. Includes one pair. Made in Finland.

SKI HOLDER #7431

Slip-on ski holder. 1 pair.

SMOOTHING CORK #611

Genuine cork for smoothing wax and applying coatings by rubbing.

FIBERREX SOFT AND COARSE

To clean the base, use Rex Wax Remover during wax removal or when preparing new skis. Effectively cleans when moistened with wax remover fluid.

#626 Soft
#625 Coarse

KLISTER SCRAPER #754

Plastic klister scraper.

GROOVE SCRAPER #607

Plastic groove scraper.

MULTI SCRAPER #602

Plastic multiscraper.

FELT CORK #613

For applying, fixing, and finishing glide waxes.

ROUGHENING CORK #6111

The roughening cork is used to roughen the grip zone of skis as well as the grip zone of zero grip base skis.

SMOOTHING CORK #612

Smoothing cork, divynycell. Used for smoothing grip waxes.

WORLD LEADING CHAIN LUBRICANTS

HOT WAX IS THE HOTTEST TREND IN CYCLING, AND REX IS ON TOP OF IT

Lowest possible friction, best dirt repellency, and easier maintenance with Rex!

Solid chain wax does not collect dirt, keeping the entire transmission of the bike clean and repelling dirt more effectively than traditional chain lubes. BLACK DIAMOND HOT WAX combines Black Diamond's proven effective additive technology with over 70 years of wax experience from Rex. Switching to hot waxing makes bike cleaning much easier, and drivetrain component wear is dramatically decreased in long-term use. Hot-waxed chains don't stain and do not require powerful solvents for cleaning. Instead, they can be easily cleaned with hot water only.

BLACK DIAMOND HOT WAX

WORLD'S LEADING BICYCLE CHAIN WAX

Lowest possible friction, best dirt repellency, and easier maintenance.

The black additive block available also separately. Record-breaking lubricating performance, as tested by Zero Friction Cycling and used by top professionals in road cycling, mountain biking, and gravel racing.

Zero Friction
Cycling

#909 Black Diamond 11+1 Box
#9091 Black Additive Block

BLACK DIAMOND #9072

THE KING OF CHAIN LUBES

The original Black Diamond lube's development led to our hot wax creation. Now, the second generation of Black Diamond lube borrows from our hot wax, featuring a formula with the maximum amount of actual melted hot wax for optimal performance. Essential for e-bikes, it offers anti-wear properties that extend the life of chains and chainrings.

DOMESTIQUE #9002

ALWAYS WORKING FOR YOUR BENEFIT

The second generation of our original Rex chain lube. The updated formula is based on the white wax blocks of our hot wax, melted in for longevity and the lowest possible friction.

ARCTIC #9302

DESIGNED FOR WINTER

The winter version of Domestique has been improved with a completely PFAS-free formula that is even more water-resistant and less affected by temperature changes.
