

AIRTRIM®

Exchanger that protects your airways from cold and dry air

Airtrim - Protects your airways from cold and dry air.

Use Airtrim breathing mask when it is cold outside. The air you breathe in through the filter become warmer and humid by your exhaled air. Your airways are therefore protected against dry and cold air. With Airtrim you are able, without extra effort, to walk, work out and stay outside longer in the winter.

Don't forget to dress warmly though. It is easy to forget that it is cold when the air you breathe is warm.

The Airtrim Sport - is supplied with two filters. The filter inside the mask is the No. 1 racing filter and the filter enclosed in the package is the sport filter. The sport filter provides a little more heat.

The Airtrim Asthma - is supplied with two asthma filters. If you suffer from asthma, cold-induced asthma, angina or COPD we recommend you to use the asthma filter.

Accessories

All filters can be bought as spare parts. The Racing filters 1, 2 and 3 give lower wind resistance and lower humidity and heat. No 3 have the least wind resistance and warmth.

How do I clean my Airtrim?

The mask can be cleaned with warm water but be sure to remove the filter first. The filter does not need to be cleaned after use, just leave it air-dry at room temperature.

How do I change filter?

It is easy to change filters in the mask. Tap the filter's plastic casing (the frame that holds the filter) from the inside of the mask and let the filter fall out of the mask. Then insert the new filter, with the bay outward, from the inside of the mask and make sure that the filter seal tightly around the opening.

How long can I use my filters?

We recommend that you replace your filters with new ones once a season but it depends on how often you use your Airtrim. Some people change filters every season while other use the same filters longer.

How do I get rid of condensation on the filter during use?

When using the mask for a long time condensation occurs in the filter. Make it a habit to once in awhile blow the moisture out with a sharp exhalation. Let the mask and filter air-dry after use.

Sleep with Airtrim

When your throat feels dry or sore you can use Airtrim even indoors. Use the asthma filter and the warm and humid breathing air will help you get better faster.

Should I lend Airtrim to others?

Airtrim is personal equipment. Do not lend the mask to others due to the risk of infection.

Can I use Airtrim as a protective mask?

Airtrim is not a protective mask against i.e. solvents or dust and can not be used as respiratory protection for ski waxing.
