

**OPTIWAAX**

# **LESS TIME FOR WAXING IS MORE TIME FOR SKIING**

Optiwax is a Finnish wax brand for snowboarding, alpine skiing and cross country skiing. The products are developed by an award winning company, led by a large group of powerful players in the ski world. Their enthusiastic and long term efforts strive to deliver more pleasurable skiing by making the preparation of skis as easy as possible. Besides ski waxes, our nanotechnology is also used in waxless cross country skis, which won the most prestigious innovation award in Finland in 2010.

Our goal is to make preparing skis easier and faster, which means you can spend more time enjoying your skis and less time maintaining them. After several years of testing, we are happy to bring the Optiwax collection of ski waxes to the market. Optiwax has a broad product line for both beginners and professionals. Optiwax Glide Tapes are the easiest choice for beginners, but thanks to their excellent gliding properties and extremely good durability they are also widely used among racing athletes. Fluor powders, blocks, gliders, glide tapes, and grip waxes are named by using the numbers from zero to three ensuring total ease of choice. The Optiwax 'Nanoski' products help Nanogrip and Optigrip ski owners take care of their ski equipment.

# GLIDE TAPES FOR CROSS COUNTRY SKIS

The perfect pleasure of skiing can only be achieved with excellent glide. When the glide wax is long-lasting, fast, and easy to use, you can enjoy the best of skiing every time. Our Optiwax glide tapes are the number one choice, especially for beginners. Tape waxing can be done without any special waxing equipment and it results in almost racing level glide for up to 200 kilometers.

The glide tapes are also widely used by ski racers – the durability has offered many great results in long ski marathon races. The glide tape is also the perfect choice for skiing holidays due to the fact that one single visit to the wax room offers great glide for many days. World class athletes also appreciate the extreme durability and ease-of-use of our Optiwax glide tapes. Optiwax has three different widths of glide tape for XC-skiing, alpine skiing, and snowboarding.

**QUICK & EASY  
WAXING IN  
2 MINUTES!**

Attach tip or tail of the ski to the glide tape package and pull out the glide tape over the glide area of ski (**with the letters up**). Heat the iron up to 150–160 °C. You do not need a special waxing iron. Glide the iron slowly on the glide tape so that the wax will warm and attach in the ski glide surface. After ironing pull the glide tape away and brush the ski. The ski is ready for a ride. **Learn more and watch waxing videos at [Optiwax.fi](http://Optiwax.fi) or download mobile app.**

## **Glide Tape 1 +5...-10°C**

Glide Tape 1 is high fluor wax for cross country skiing, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

**Width 60 mm, length 10 m  
Product No. 20110081**

## **Glide Tape 2 -5...-20°C**

Glide Tape 2 is high fluor wax for cross country skiing, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

**Width 60mm, length 10 m  
Product No 20120081**

## **Glide Tape 1, 40 m +5...-10°C**

Big brother for glide tape 1, bigger package size offers 40m of tape.

**Width 60 mm, length 40 m  
Product No. 20110401**

## **Glide Tape 2, 40 m -5...-20°C**

Big brother for glide tape 2, bigger package size offers 40m of tape.

**Width 60 mm, length 40 m  
Product No 20120401**

# GLIDE TAPES FOR ALPINE SKIS AND BOARDS

## Glide Tape 1 Wide +5...-10°C

Glide Tape 1 Wide is high fluor wax for alpine skiing, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

**Width 120 mm, length 10 m**  
**Product No 20210081**

## Glide Tape 1 Wide, 25 m +5...-10°C

Big brother for glide tape 1 wide, bigger package size offers 25m of tape.

**Width 120 mm, length 25 m**  
**Product No 20210401**

## Glide Tape 2 Wide -5...-20°C

Glide Tape 2 Wide is high fluor wax for alpine skiing, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

**Width 120 mm, length 10 m**  
**Product No 20220401**

## Glide Tape 2 Wide, 25 m -5...-20°C

Big brother for glide tape 2 wide, bigger package size offers 25m of tape.

**Width 120 mm, length 25 m**  
**Product No 20220081**

Photo: Petri Rahkonen

## Glide Tape 1 Extra Wide | +5...-10°C

Glide Tape 1 Extra Wide is high fluor wax for snow-boards, made for high humidity conditions. Wide function range and glide properties on wet and dirty snow makes Glide Tape 1 a great universal glide.

**Width 320mm, length 3,2m**  
**Product No 20310321**

## Glide Tape 2 Extra Wide | -5...-20°C

Glide Tape 2 Extra Wide is high fluor wax for snowboards, made for high dry conditions. Special Optiwax production process makes Glide Tape 2 extreme durable and hard.

**Width 320mm, length 3,2m**  
**Product No 20320321**

# UHF GLIDE TAPES

## Glide tape UHF +1...-20°C

Black Optiwax Glide tape UHF is hardest and most durable glide tape. Ultra high Fluor concentration makes the working range of product extremely wide.

**Width: 60mm, Length: 10m**  
**Product No: 20130101**

## Glide tape UHF, 40 m +1...-20°C

Big brother for Glide tape UHF, bigger package size offers 40m of tape.

**Width: 60mm, Length: 40m**  
**Product No: 20130401**

## Glide tape UHF wide +1...-20°C

Black Optiwax Glide tape UHF is hardest and most durable glide tape. Ultra high Fluor concentration makes the working range of product extremely wide.

**Width: 120mm, Length: 10m**  
**Product No 20230101**

## Glide tape UHF wide, 25 m +1...-20°C

Big brother for Glide tape UHF Wide, bigger package size offers 25m of tape

**Width: 120mm, Length: 25m**  
**Product No 20230251**

# OPTIWAX

## GLIDE TAPE RACE WAX

### A CONCEPT FOR XC-SKIING

**MOST DURABLE WAX ON THE MARKET**

**EXTREMELY FAST, ESPECIALLY AT HIGH SPEED**

**EASIEST AND FASTEST WAY TO WAX SKIS**

## 3 GLIDE TAPES AND 3 FLUOR BLOCKS OFFER OPTIMAL RACE WAX FOR EVERY CONDITION

Glide tape wax is harder than any other wax and offers 3-7 times better durability than normal waxes. Glide tape method makes it possible to produce harder waxes than ever which are still easy to get into the ski.

## OPTIWAX RACE WAXING CHART

TEMPERATURE		5	4	3	2	1	0	-1	-2	-3	-4	-5	-6	-7	-8	-9	-10	-11	-12	-13	-14	-15	-16	-17	-18	-19	-20
HIGH HUMIDITY >80%	TAPE	GLIDE TAPE 1					GLIDE TAPE UHF										GLIDE TAPE 2										
	BLOCK	FLUOR BLOCK 1					FLUOR BLOCK 2					FLUOR BLOCK 3															
MEDIUM HUMIDITY 50-80%	TAPE	GLIDE TAPE 1					GLIDE TAPE UHF										GLIDE TAPE 2										
	BLOCK	FLUOR BLOCK 1					FLUOR BLOCK 2					FLUOR BLOCK 3															
DRY HUMIDITY <50%	TAPE	GLIDE TAPE 1					GLIDE TAPE UHF										GLIDE TAPE 2										
	BLOCK	FLUOR BLOCK 1					FLUOR BLOCK 2					FLUOR BLOCK 3															

- Clean the ski and open the structure
- Rub a thin layer of Optiwax Fluor block to the glide zone. Attach ski tail to the glide tape package and pull the glide tape over the ski.
- Glide the iron (150-160°C) slowly onto the glide tape and pull the glide tape away.
- Use cork to smooth attached wax layer and glide the iron ones over the glide surface. Brush the ski immediately with Optiwax hard nylon and horse hair brush.
- Cool down the ski
- Brush the ski with Optiwax fine steel, brass, horse hair and hard nylon brush.

# GLIDE TAPE ECO PRODUCT LINE

Glide tape eco product line offers biodegradable eco-friendly products for xc-skiing, alpine and product for wide +120 mm skis. By choosing Glide tape eco users will get same extreme durability and user friendly application method than with other glide tapes. Wax itself is extreme wide working range universal wax, so it will be perfect choice for every condition. These glide tapes can be recycled with paper waste.

## **Glide Tape Eco Universal +5...-20°C**

Glide tape eco is non-Fluor eco-friendly product for xc-skiing. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. On the top skin-skis glide tape eco will improve glide, prevent ski to became wet and works against icing.

**Width 60 mm, Length 10 m  
Product No 20140100**

## **Glide Tape Eco Wide Universal +5...-20°C**

Glide tape eco wide is non-Fluor eco-friendly product for Alpine skiing. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. This product can be used also over the skins, when it will improve its function by glide improvement, works against icing and prevent ski to became wet.

**Width 120 mm, Length 10 m  
Product no. 20240100**

## **Glide Tape Eco Fat Universal +5...-20°C**

Glide tape eco fat is non-Fluor eco-friendly product for the wide +120 mm skis. Product has extreme hard wax material which offers extreme durable and wide working range universal glide. This product can be used also over the skins, when it will improve its function by glide improvement, works against icing and prevent ski to became wet.

**Width 160 mm, Length 10 m  
Product No 20440100**

# PRODUCTS FOR OPTIGRIP® , NANOGRIP® & SKIN SKIS

The next generation of chemical nano coating treatments that we use embodies our goal to offer skis that work properly without any waxing, which means more time enjoying your journey on snow. This pioneer in waxless surfaces is being manufactured under the brand names Optigrip and Nanogrip. The secret of simultaneous glide and grip rests in the control of static and kinetic friction in different conditions. Grip and glide properties of the ski are based on the interaction of nano pores and the chemical construction of our coating material with snow. To ensure the best functionality of your skis, it is essential to use the correct care products for the surface in order to keep the surface pores open. Using Optiwax conditioners, you can be sure that the treatment is suitable for this unique surface and you will get the best out of your Optigrip and Nanogrip skis.

## Gripcare®

New product that will increase function of Optigrip skis. It will increase glide and grip properties, it will ease initialization of new pair of skis and decrease freeze problems. Optiwax Gripcare® fluid is easy to spread on the ski with sponge plug. Yoko recommends Gripcare® service product for Optigrip skis.

**Volume 60ml**

**Product No. 60091001**

## Gripcleaner®

Dirt effects Optigrip®-skis glide and grip properties. Optiwax Gripcleaner® will return those properties. It cleans the ski without damaging the surface. After Gripcleaner® treatment use of Gripcare® is recommended.

**Volume 90ml**

**Product No. 60091002**

## Optiwax Skincleaner®

Optiwax Skincleaner® is dirt repellent clean and care product for skin-skis. Skincleaner® cleans effectively skis mohair hair from the dirt. The Fluor component prevent mohair to become dirty. Product is packed in the handy spray bottle.

**Volume: 85 ml**

**Product No 60091003**

## PRO TIP

**Optiwax Skincleaner® and Glide Tape are perfect combo for skin-ski owner. Glide Tape waxing over the mohair offers perfect glide, prevent ski to become wet, works against dirt and skincleaner cleans the ski when its needed.**

**NANOGRIP®**

# FLUOR POWDERS & FLUOR BLOCKS

Optiwax Fluor powder products are made especially for racing. These cutting edge waxes are a combination of award winning technology, knowledge, and experience. This combination has resulted in fast, durable, and versatile powder waxes for racers who only want the best.

Optiwax Fluor blocks can be used in multiple ways in race waxing. With simply three different blocks, you are able to create a world class glide for every condition. Together with a glide tape, Fluor blocks retain glide extremely long. That is why our Fluor blocks have been so popular among long distance racers. Optiwax Fluor blocks are a fast and easy way to create world cup level glide.

**Fluor Powder +0**  
**+10...-10 °C**  
The Orange Optiwax Fluor Powder +0 is wide range universal powder for new snow  
**Net weight 25 g**  
**Product No. 5000202**

**Fluor Powder 0**  
**+10...-5°C**  
The yellow Optiwax Fluor Powder 0 is for old snow and wet conditions.  
**Net weight 20 g**  
**Product No. 5000201**

**Fluor Powder 1**  
**+2...-10°C**  
The red Optiwax Fluor Powder 1 is the choice for the new snow and snowfall.  
**Net weight 25 g**  
**Product No. 50010251**

**Fluor Powder 2**  
**-8...-20°C**  
The white Optiwax Fluor Powder 2 is a special powder for extremely cold conditions.  
**Net weight 25 g**  
**Product No. 50020251**

**Hard Powder**  
**-10...-20°C**  
The Blue Optiwax Hard Powder is for cold and aggressive snow conditions.  
**Net weight 25 g**  
**Product No. 50050251**

**Grip Powder**  
Optiwax Grip powder is developed for race skiers who want to improve glide properties of their gripwax.  
**Net weight 25 g**  
**Product No. 50090251**

**Fluor Block 1**  
**+4...-2°C**  
The Optiwax Fluor Block 1 is the best choice on new snow around zero degrees.  
**Net weight 15 g**  
**Product No. 40010151**  
**Net weight: 5 g**  
**Product No. 40010051**

**Fluor Block 2**  
**-2...-8°C**  
The Optiwax Fluor Block 2 is a wide-range block for old and artificial snow.  
**Net weight: 15 g**  
**Product No. 40020151**  
**Net weight: 5 g**  
**Product No. 40020051**

**Fluor Block 3**  
**-8...-20°C**  
The Optiwax Fluor Block 3 is made for new fine structured snow in cold conditions.  
**Net weight: 15 g**  
**Product No. 40030151**  
**Net weight: 5 g**  
**Product No. 40030051**

# FLUOR GLIDERS

We are inspired to offer well-tested and versatile products. We have strived to keep our product line as simple as possible in order to make choosing the right wax as easy as possible. These LF and HF waxes are developed to cover all of your race waxing needs.

**LF 2**  
**+2...-10°C**  
 Made of high quality ingredients. This wax is the perfect choice as basic wax and it provides an excellent base layer for all kind of race waxes.  
**Net weight 60 g**  
**Product No. 30220601**  
**Net weight 180 g**  
**Product No. 30222001**

**LF 3**  
**-3...-20°C**  
 LF3 is low Fluor concentration wax with wide working range. It is extremely durable and fast also in warmer conditions than stands on the label.  
**Net weight 60 g**  
**Product No. 30320604**  
**Net weight 180 g**  
**Product No. 30222003**

**LF 4**  
**-10...-30 °C**  
 For cold and aggressive snow. Extremely durable and fast on those conditions and it offers excellent base for race waxing in the cold conditions.  
**Net weight 60 g**  
**Product No. 30420601**  
**Net weight: 180 g**  
**Product No. 30222003**

**BASE LF**  
**+10...-20 °C**  
 Medium hard Universal low Fluor wax for base preparation and good choice for a universal glider  
**Net Weight 60g**  
**Product No. 30120601**

**HF 2**  
**+2...-10 °C**  
 Made with the same components as the LF2 wax but it has a far higher fluor concentration. For very humid conditions. Works perfectly as a base layer for Optiwax powders and blocks.  
**Net weight: 60 g**  
**Product No. 30320601**

**HF 3**  
**-3...-20 °C**  
 High Fluor concentration wax with wide working range. It's extremely durable and fast also in warmer conditions. This wax is most used Optiwax High Fluor wax in race waxing.  
**Net weight: 60g**  
**Product No. 30330602**

**HF 4**  
**-10...-30 °C**  
 Best choice for cold and dry conditions. It's optimized for cold and aggressive snow, wax can be used alone for racing in these conditions. Very durable in these harsh conditions.  
**Net weight: 60 g**  
**Product No. 30340601**

**Liquid HF Universal**  
**+10...-20 °C**  
 This quick liquid glide wax is suitable for all kind of snow types at wide temperature range, on its best when used on top of paraffin waxes. Great for skiers who want a well-performing quick glide. Shake, apply, let dry, polish and go skiing.  
**Volume 60 ml**  
**Product No. 4500600**

# GRIPWAXES

Our Optiwax Gripwax line includes products that have optimized properties for different temperature ranges. The waxes for warmer weather include Fluor whereas the waxes for colder conditions don't. For this simple Grip wax line, we have chosen the best possible products for different temperature ranges.

**Grip Wax 0**  
**+2...-2°C**  
The Optiwax Gripwax 0 is a wax for conditions around zero. Good properties against icing.  
**Net weight 45g**  
**Product No. 9000201**

**Grip Wax 1**  
**0...-3°C**  
The Optiwax Gripwax 1 is below zero wax with aggressive grip properties.  
**Net weight 45g**  
**Product No. 90001201**

**Grip Wax 2**  
**-1...-6°C**  
The Optiwax Gripwax 2 Provides aggressive grip for cold conditions.  
**Net weight 45g**  
**Product No. 90002201**

**Grip Wax 3**  
**-2...-10°C**  
Optiwax Gripwax 3 is universal grip wax for cold temperatures.  
**Net weight 45g**  
**Product No. 90003201**

**Base Wax**  
The Optiwax Base Wax offers very durable base for any gripwax.  
**Net weight 45g**  
**Product No. 90009201**

# KIKKAN KLISTER

The Optiwax Kikkan Randall klister line fulfills all the basic needs of klister waxing. From this simple line, it is easy to choose a correct klister for all conditions.

**Klister Red Kikkan**  
**+10...0 °C**  
Special Klister for wet snow.  
**Net weight: 55 g**  
**Product No. 90001551**

**Klister Violet Kikkan**  
**+5...-10 °C**  
Klister for coarse and icy snow  
**Net weight: 55 g**  
**Product No. 90003551**

**Klister Universal Kikkan**  
**+5...-20 °C**  
Universal klister  
**Net weight: 55 g**  
**Product No. 90002551**

*Kikkan Randall*
