ROTARY TUMBLER BASES

OPERATING INSTRUCTIONS

This machine has been tested and pre-run at the factory

CAUTION - Always make sure the power cord is plugged in to a grounded outlet.
Make sure the area around the machine is dry.

This machine is designed only to be used on a solid surface.

The unit must be level. If not level the barrels while revolving will move to one to one side rubbing against the bearing assembly.

General Cleaning exterior:

The fiberglass base can be cleaned by wiping them with a damp cloth. Be careful not to get any moisture around switch or electrical cord. The fiberglass is Impervious to chemicals.
The Shaft(s) have a neoprene cover can be cleaned by wiping them with a damp cloth

Motor and Bearings:

The tumbler motors are "designed for continuous use" and never need oiling. No lubrication is required for bearings or shaft.
