

Battery Replacement Instructions

HammerHead

Instructions

1. Turn the light so it is upside down and the backing is facing you. Look for a small arrow on the bottom of the base pointing toward the neck of the light.
2. Using your thumb, slide the cover in the direction of the arrow.
3. If the cover seems to have trouble sliding forward, try applying a small amount of downward pressure while sliding. If this does not work the batteries may have moved around during shipping. A few small taps on the cover with the light facing down should loosen them.
